

Deferred Water Storage and Delivery Plan

Ref: DEW-D0036586

Prepared for Adoption from 1 September 2026

Purpose

Under Schedule G of the *Murray-Darling Basin Agreement 2008* (the Agreement), the Basin Officials Committee Member for South Australia must provide to the Murray-Darling Basin Authority (MDBA), New South Wales and Victoria by the first day of each month, a draft Deferred Water Storage and Delivery Plan (the Plan) for at least the following 12 months. The Plan contained herein fulfils South Australia's requirements under this Schedule.

Draft Plan Requirements

Under clause 7(1) in Schedule G of the Agreement, the Plan for at least the following 12 months is required to estimate the deferred water to be stored and delivered in each of those months under either:

- a) worst case inflow conditions; or
- b) other inflow conditions specified in the Plan.

It must:

- a) nominate how much of the deferred water held in storage at the commencement of the Plan is for the purpose of meeting critical human water needs (CHWN);
- b) for each month of the Plan, provide for the delivery of deferred water for the purpose of meeting either or both CHWN and private carryover (PC);
- c) for each month of the Plan, nominate one or more preferred major storages in which water set aside as deferred water in that month might be stored;
- d) for each month of the Plan, nominate one or more preferred major storages from which deferred water might be delivered;
- e) for each month of the Plan, nominate any preferred transfers and substitutions of deferred water between major storages; and
- f) not provide for deferred water to be delivered in the same month as that water became deferred water.

Draft Deferred Water Storage and Delivery Plan

A summary of the volumes proposed by South Australia for deferral and delivery are presented in **Attachment B** and discussed in this Plan.

Plan Duration

This Plan has been prepared for the period 1 September 2026 to 31 August 2027 (12 months).

Inflow Assumption

This Plan is based on South Australia receiving its full Entitlement Flow of 1,850 gigalitres (GL) during 2026-27. It is noted that South Australia commenced the MDBA water year below entitlement flow for the water year and has now been provided the formal advice that full entitlement volume is available, based on the end of July water resource assessment.

Expected Volume Held at Commencement of Plan

At the commencement of this Plan, it is expected that South Australia will hold a total volume of 340.6 GL of deferred Entitlement Flow (**Attachment A**). This is based on the MDBA confirmed 11 August 2026 volume (340.6 GL) and any planned or expected deferrals (0 GL), losses, spills and/or deliveries (0.0 GL) over the month of August 2026.

Deferred Water

The plan proposes to defer a total of 0.0 GL from 1 September 2026 to 31 August 2027. South Australia will review the deferral volumes proposed in the plan monthly, noting recent improvements to water resource availability. Future plans will consider the persistence of the current unregulated flow event (which commenced 8 July 2026) and Lake Victoria volume.

Delivery of Deferred Water

No requests for delivery of stored water are made in this plan. Delivery requests may be altered in future plans, depending on formal advice pertaining to South Australia's Entitlement Flow for 2027-28. A forced delivery/spill of 25.7 GL of deferred water in Lake Victoria occurred throughout July because of unregulated flow and the filling of Lake Victoria.

Transfers and Substitutions

SA's preference is for the storage of deferred water to ultimately be in Dartmouth Dam. It is requested that deferred water be moved from Hume Dam to Dartmouth dam at the earliest possible convenience, noting that substitutions are dependent on operational transfers. Transfers and substitutions will be detailed in future plans, if delivery of the storage right is required.

Proposed Net Flow to South Australia

The net flow delivery at the South Australian border is to be delivered as outlined in the *Proposed SA Entitlement Volume for Deferral and Delivery* table in **Attachment B**.

Plan Review

As provided for in Schedule G of the Agreement, the Plan will be reviewed monthly and South Australia reserves the right to seek variation to any of the elements contained in this Plan if water resource availability conditions change. South Australia reserves the right to re-commence deferral ahead of any given month, noting recent improvements to water resource availability.

DAN JORDAN

BASIN OFFICIALS COMMITTEE MEMBER, SOUTH AUSTRALIA

Date: 31 August 2026

Draft Deferred Water Storage and Delivery Plan

Date effective: 1 September 2026 to 31 August 2027

Assumed Inflow Conditions: 1,850 GL of entitlement flow for the 2026-27 water year (full entitlement)

Expected Volume Held in Storage at commencement: **340.6 GL** – This volume is comprised of the MDBA accounted volume of 340.6 GL at the end of July plus planned deferral through August (0.0), minus deliveries (0.0) and spills (0.0 GL from Lake Victoria). This expected volume does not include assumed evaporative losses through August.
