Nature

Adelaide Nature of a City: The ecology of a dynamic city from 1836 to 2036 [Book]

2005, BioCity

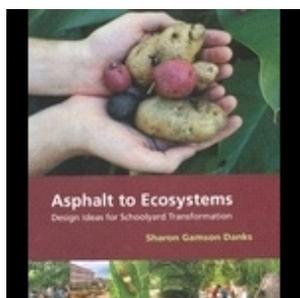

This book tracks the changes to the biological communities, to the plants and animals, and to the structure and nature of the built environment of the city of Adelaide from its inception in 1836 to the present day and predicts the future through to 2036.

Adelaide: the Nature of our City [DVD]

2010, Barbara Hardy Centre UniSA

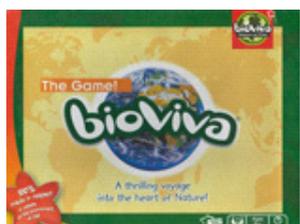

Cities such as Adelaide in South Australia are constructed environments designed to suit the many demands of their human inhabitants. However, we often don't realise that we share these locations with animals. Some of these animals are native, others come from elsewhere. Some animals only inhabit very specific locations in one part of the house, whilst others are everywhere. This documentary examines the city as a habitat for animals. It views each component as an ecosystem and explores how we share our space with an amazingly diverse array of animals.

Asphalt to Ecosystems: design ideas for schoolyard transformation [Book]

2010, New Village Press

Author Sharon Danks broadens our notion of what a well-designed schoolyard should be, taking readers on a journey from traditional, ordinary grassy fields and asphalt to explore what's being created in the growing movement toward "green" schoolgrounds in the United States and around the world. This book documents exciting examples from more than 150 schools in 11 countries, illustrating a vast range of possibilities in outdoor classrooms for learning and play.... The book grounds these examples in a practical framework that illustrates simple landscape design choices all schools can use to make their schoolyards more comfortable, enjoyable, and sustainable. And it describes a participatory design process that schools can use to engage their communities in transforming asphalt into ecosystems." Over 500 colour photographs.

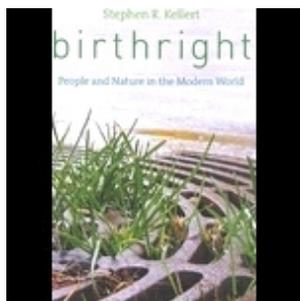

Bioviva: nature at play [Game]

1996, Bioviva Editions

A traveller thirsting for knowledge about your environment, you set off to explore the biosphere. With a curious mind and a healthy sense of humour, you move through the different natural regions of the Earth trying to answer surprising questions and to collect the much sought after Eco Points.

Nature

Birthright: people and nature in the modern world [Book]

2012, Yale University Press

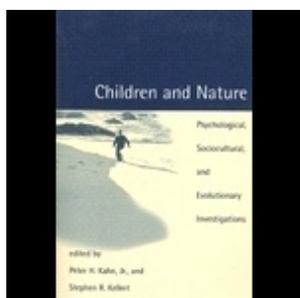

An eloquent explanation of why human beings need to connect with nature and what is lost when they are disconnected from the natural world.

Childhood and Nature: Design Principles for Educators [Book]

2008, Stenhouse Publishers

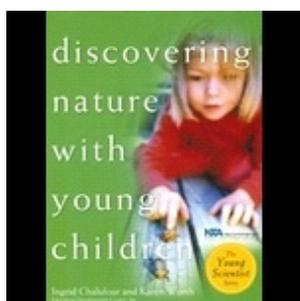

Public discussions of global climate change and other threats to the planet are making children more aware of environmental issues. As increasing numbers of kids come to school wishing to take action, educators want to know how to teach in a way that fosters a love of nature and an understanding of the complexity and seriousness of these issues. In *Childhood and Nature*, noted educator David Sobel makes the case that meaningful connections with the natural world don't begin in the rainforest or arctic, but in our own backyards and communities. Based on his observations of recurrent play themes around the world, Sobel articulates seven design principles that can guide teachers in structuring learning experiences for children. Place-based education projects that make effective use of the principles are detailed throughout the book.

Children and nature: psychological, sociocultural, and evolutionary investigations [Book]

2002, The MIT Press

Children and Nature incorporates research from cognitive science, developmental psychology, ecology, education, environmental studies, evolutionary psychology, political science, primatology, psychiatry, and social psychiatry. The authors examine the evolutionary significance of nature during childhood; the formation of children's conceptions, values, and sympathies toward the natural world; how contact with nature affects children's physical and mental development; and the educational and political consequences of the weakened childhood experience of nature in modern society.

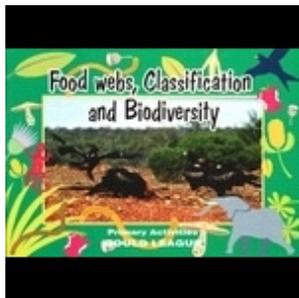

Discovering nature with young children [Book]

2003, Redleaf Press: Minnesota

Opening young minds to the wonders of nature, *Discovering Nature with Young Children* expands the role science has traditionally played in the early childhood classroom...From indoor terrarium and planting projects to outdoor animal searches and habitat discussions, teachers learn how to prepare themselves and their classroom; guide children through both open and focused science explorations; and observe, assess, and document their learning."

Into the field: a guide to locally focused teaching [Book]

1996, The Orion Society

Into the Field provides middle school through undergraduate teachers with curriculum ideas for engaging students in the natural and cultural history of their communities. The activities described can be used by teachers of English, science, history, or arts, and can be adapted to one-day trips or year-long projects.

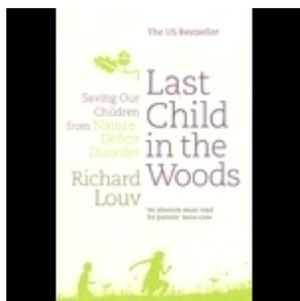

Just Discover! Connecting young children with the natural world (Copy 1) [Book]

2003, Tertiary Press

How can we foster a connection between children and nature? Just Discover! offers a variety of practical and creative natural science experiences to answer this question. Covering topics like plants, animals, the human body, and environmental education, this book provides valuable resources for both new and experienced early childhood educators seeking to enhance children's learning environments.

Last child in the woods - saving our children from nature-deficit disorder [Book]

2005, Atlantic Books

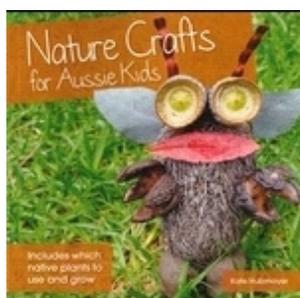

This urgent book shows how our children have become increasingly alienated and distanced from nature, why this matters and how we can make a difference. Last Child in the Woods, which has inspired the influential international movement Leave No Child Inside, has not only drawn attention to the issue and provoked debate; it also offers practical advice on how to help children enjoy the natural world - starting in our parks and gardens, homes and schools.

Messy Maths: a playful, outdoor approach for early years (copy 1) [Book]

2018, Hawker Brownlow Education

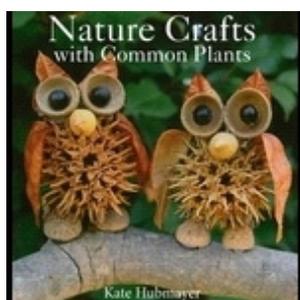

Real maths is really messy. Children need physical experiences to make sense of the abstract ideas of maths and to ponder, enjoy and discuss the concepts encountered. In Messy Maths Juliet Robertson offers a rich resource of ideas that will enable you to tap into the endless supply of patterns, textures, colours and quantities of the outdoors and deepen children's understanding through hands-on experience.

Nature crafts for Aussie kids (Copy 1) [Book]

2014, Kate Hubmeyer

15 fun crafts to encourage children of all ages to use their imagination and connect with nature. Includes information on 18 useful and beautiful Australian native plants to grow.

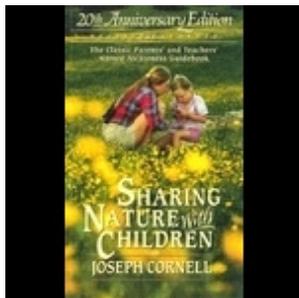

Nature crafts with common plants [Book]

2017, Kate Hubmeyer

Following on from the success of Nature Crafts for Aussie Kids, this book features more imaginative craft ideas, using plants which are widespread throughout the world.

Nature

Sharing Nature with Children: 20th Anniversary Edition [Book]

1998, Dawn Publications

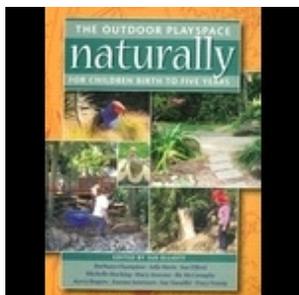

Sharing Nature with Children is not just a book, but a powerful approach to nature education. The first edition of this book sparked a worldwide revolution in nature education, and became a classic. The author, Joseph Cornell, is one of the most highly regarded nature educators in the world today. His expertise, and his irrepresible enthusiasm for the grandeur and mystery of nature, spill over onto every page. His unique blend of knowledge and warmth creates an atmosphere for learning that is very contagious. In honor of the book's 20th anniversary, Cornell - drawing upon his experience giving workshops worldwide - has added eight new games and revisited many others in this second edition.

The new nature: winners and losers in wild Australia [Book]

2003, Penguin

Forget about wilderness, Tim Low says nature lives here in our cities and gardens, exploiting everything we do, forging new connections with us. Endangered species are turning up in industrial zones. In our forests, native pests, including lyrebirds and rainforest trees, are now a force to reckon with. Sheep are being kept in some national parks to save rare birds and plants. We need to know why. The New Nature shows that: wildlife welcomes our sewage, rare animals need weeds, wildlife-friendly gardening is not so friendly. Tim Low's groundbreaking book will change your view of nature.

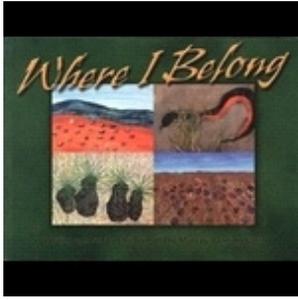

The outdoor playspace naturally for children birth to five years (copy 2) [Book]

2008, Pademelon Press

This book will challenge your perceptions about early childhood outdoor playspaces and inspire change. We can do better for children than quick-fix, generic and synthetic solutions. This publication provides the foundation for creating natural, dynamic and engaging playspaces. At its heart, the creation of a natural playspace is a collaborative venture between children, parents and staff that is locally vital and evolves over time. The inspiring photographs and case studies well illustrate the potential. The authors of this publication are committed to change - change that will improve children's outdoor play opportunities, health and wellbeing, and their connections with nature while promoting education for sustainability.
