

Planting Guide for Kangaroo Island Integrated Pest Management

Planting Guide for Kangaroo Island Integrated Pest Management

Integrated pest management (IPM) is a balanced, tactical approach to managing diseases, insects, weeds, and other pests using a wide range of pest control strategies or tactics. It involves taking action to anticipate pest outbreaks and to prevent potential damage to pastures and crops. The goal of IPM is not eradication but to prevent pests from reaching economically or aesthetically damaging levels with the least risk to the environment. IPM programs are very site-specific. IPM is based on the identification of pests, accurate measurement of pest populations, assessment of damage levels, and knowledge of available pest management strategies or tactics that enable the grower to make intelligent decisions in controlling pests.

The following list provides a guide to local native flowering plants (angiosperms) of Kangaroo Island that can be planted to attract beneficial insects (pollinators and predators) to support IPM approaches.

The Kangaroo Island Native Plant Nursery grows over 100 different species of KI native plants, which can be used for increasing biodiversity, revegetating land, windbreaks, and shelterbelts. To find out which species will best suit your property contact the Nursery Manager who will also be able to assist with advice what best to plant where to suit the soils and conditions of your property and planting strategies that will maximise success.

For larger orders, Nursery staff will collect seeds from around the area where the plants are to be grown, to ensure that provenance is continued. Plants grown from provenance seed have excellent survival rates as their genetics are adapted to tolerate those particular environmental conditions.

The Kangaroo Island Native Plant Nursery is located at 22b Telegraph Road, Kingscote. Enquiries can be made at any time of year to the Nursery Manager by calling 0437 322 692 or emailing kinateiveplantnursery@sa.gov.au

This guide was supported by the Kangaroo Island Landscape Board, through funding from the Australian Government.
