

SOUTH EAST WIND EROSION POTENTIAL

The map is based on an interpretation of soil landscape mapping units. Many mapping units are dune - swale systems, where wind erosion potential varies widely within the unit. Proportions of erosion potential classes also varies significantly. The 16 classes shown on the map account for both the degree of wind erosion potential and the variability of potential within mapping units.

WIND EROSION POTENTIAL

DOMINANT	SUBDOMINANT
Low	-
Low	Moderately low to moderate
Low	Moderately high to extreme
Moderately low	Low

NOTES ON USE OF THE MAP:

1. This information is derived from limited field inspection, and is subject to change without notice.
2. Boundaries between mapping units should be treated as transition zones.
3. The map is intended to provide a regional overview and should not be used to draw conclusions about conditions at specific locations.
4. Under no circumstances must the scale of the map be enlarged beyond its scale of publication.
5. Advice from DWLBC Soil and Land Program should be sought prior to using this information for commercial decision making.
6. Under no circumstances may the data or information associated with this map or any accompanying report be altered in any way without the express permission of DWLBC Soil and Land Program.

IMPORTANT NOTICE: Although all reasonable care has been taken in preparing this information, neither DWLBC nor its officers accept any liability resulting from the interpretation or use of the information displayed on this map or presented in any accompanying document. Information on the map or any accompanying document is subject to change without notice.

LAND ASSESSMENT: Soil and Land Program, Department of Water, Land and Biodiversity Conservation (DWLBC).

MAP PRODUCTION: Resource Information Group, DWLBC.
