

Interesting Insects and Mysterious Malleefowl

From little things big things grow

Did you know that we have budding scientists making amazing discoveries all around us? Did you know that insects are part of the diet of our threatened malleefowl, and that we only have names for about 30% of the estimated 250,000 insect species in Australia?

Join us for a **FREE Family Friendly National Science Week** event to hear from:

- *Dr Erinn Fagan-Jeffries*, from the South Australian Museum, and local students who will tell us about the Insect Investigators schools project that is discovering and naming new insect species
- The National Malleefowl Recovery Team, who will reveal all about the amazing malleefowl, why they are threatened, where they can still be found and what you can do to help conserve this iconic species.

A selection of the SCINEMA International Science film festival 2022 will be shown plus activities for children.

This event is supported by the Murraylands and Riverland Landscape Board through funding from the landscape levies.

When: Sunday 21 August 2022

Time: 2 pm to 4.30 pm

Cost: Free, afternoon tea provided

Location: Loxton Precinct Function Room.
25 Bookpurnong Terrace, Loxton

RSVP:
