Acknowledgements

The consulting team has relied heavily on the voluntary cooperation of a range of government, industry and broader community representatives and is indebted to these people for providing the necessary information, guidance and assistance (list provided in Appendix 3). Janine Baker provided assistance to the ecological impact assessment team early in the project and we are grateful for that. DEWNR and PIRSA officers provided assistance, were supportive of the data collection and interpretation and offered valuable advice throughout.

Executive Summary

Including parts of the Eyre and Coorong Bioregions, the Southern Kangaroo Island Marine Park abuts the southern coast of Kangaroo Island between D'Estrees Bay and the western end of Seal Bay Conservation Park. It also includes North Rock, Young Rock and South West Rock.

Impacts of implementing the draft management plans were assessed against a base case scenario of no management plans. The base case is not static, and requires an understanding of the existing trends in natural resource, economic and social conditions. There are external factors which influence both the 'with management plan' and the base case scenarios that were taken into consideration.

Marine Park Profile

Habitats of Southern Kangaroo Island Marine Park include high energy sandy beaches, exposed cliffs, rocky headlands, rocky shores, wave-cut shore platforms, fringing reefs, and deep reefs interspersed by sandy seafloors. There are also dune systems along Cape Gantheaume, Seal Bay and Bales Beach. Adjacent to the long sandy beach and dunes of D'Estrees Bay, the slightly more sheltered waters support some of the largest seagrass beds on the south coast of Kangaroo Island.

South-west of Cape Gantheaume lies the small group of unique offshore algae-covered granite knolls (North Rock, South-west Rock and Young Rock) in relatively deep water (> 50 m), where blacklip abalone are known to thrive.

From a socio-economic viewpoint the community relevant to the Southern Kangaroo Island Marine Park is that of the Kangaroo Island region. The statistical local area (SLA) that comprises the region is Kangaroo Island (DC). Some of the key socio-economic characteristics of the region include:

- a resident population of almost 4,700 persons in 2010/11.
- a slightly higher than average concentration of younger people (aged 0 to 14 years), a smaller than average share of persons aged 15 to 64 years and a similar share of people aged 65 and over compared with the State.
- Total population on is projected to increase by around 20 per cent by 2026, whereas the SA population is expected to increase by around 23 per cent.
- The unemployment rate on Kangaroo Island was almost 3.9 per cent in the June quarter of 2011, below the state rate of 5.3 per cent.
- Over 50 per cent of the businesses on Kangaroo Island were classified in the agriculture, forestry and fishing sector.
- Mean taxable income was \$44,000 in 2009/10, 19 per cent below SA's average of \$54,000.
- Over the period 2000/01 to 2010/11, median dwelling prices increased by 176 per cent (\$235,000 in 2010/11) compared with a 197 per cent in SA as a whole (\$357,500).
- In 2009/10, the top contributors to GRP were the agriculture, forestry and fishing (20 per cent), transport and storage (10 per cent), ownership

of dwellings (9 per cent), and accommodation, cafes and restaurants (8 per cent) sectors.

- The commercial fishing and tourism industries are important to the local economy in terms of contributing to jobs and GRP. Directly and indirectly commercial fishing and aquaculture contributed 3 per cent of GRP (\$4.7 million) and 3 per cent of employment (74 fte jobs) in 2009/10. By comparison, the tourism sector contributed 38 per cent of GRP (\$62.0 million) and 43 per cent of employment (960 fte jobs).

Ecological Impacts

In general the habitats within the park can be considered to be in a condition comparable to the time of European settlement. A number of species within the park were assessed as having lower abundances compared with pre-European levels. The current state of the ecosystems in the park was generally considered to reflect the condition of their component habitats and species.

The proposed management arrangements are predicted to have a net positive long-term impact on South Australia's marine biodiversity. Without the proposed management arrangements there is potential for future activities to occur that could impact on marine habitats, species and ecosystems. The positive ecological impacts inside the Southern Kangaroo Island Marine Park will include (1) maintenance of habitats and ecosystems in relatively good condition, and (2) changes in some ecosystems towards a more natural and resilient condition. Such changes include increases in the size and abundance of some fished species, which may potentially have socio-economic benefits, and the overall shift towards a more natural ecosystem is also expected to provide a number of management benefits, although these potential benefits have not been quantified.

Various zone restrictions (with habitat protection zones and sanctuary/restricted access zones covering about 88 per cent and 12 per cent of the park, respectively) will assist with the future protection of habitats from a range of potentially damaging activities that may otherwise be possible under the existing management framework. Some habitats of particular conservation note include offshore algal-covered granite knolls, habitat for the Australian sea lion offshore from Seal Bay, the diversity of intertidal reef forms across the park, and seagrass within D'Estrees Bay. Maintenance of healthy habitats in general is essential for the functioning of ecosystems and the long-term sustainability of fisheries, aquaculture, and marine-based tourism.

A number of species when considered in isolation (namely southern rock lobster, and greenlip and blacklip abalone) have potential to increase in size and abundance inside the single sanctuary zone. All three species have potential for increased larval export to areas outside the sanctuary zone, and southern rock lobster has potential for spill-over of adults to areas outside the sanctuary zone. However, the ecosystems in which these species interact are expected to shift towards a pre-European state, which may result in declines rather than increases of some species such as blacklip abalone. Some species of conservation concern such as the western blue groper and harlequin fish will likely benefit from protection inside the sanctuary zone.

Economic Impacts

In summary, the proposed draft zoning is expected to have the following economic impacts on the following sectors of the regional economy: potential positive impact in the tourism sector in the medium to long term, neutral impact in the aquaculture, property, marine infrastructure and operations, mining and coastal development

sectors and short, medium and long term negative impacts in the commercial fishing sector.

Commercial fishing

Table ES1 shows the economic impact on the regional economy of marine park zoning on all affected fisheries. Impacts are based on SARDI's average annual displaced catches and corresponding average annual prices expressed in 2011 dollars. In aggregate, it was estimated that the impact of marine park zoning will generate the following loss of economic activity on an ongoing annual basis.

- Approximately \$0.14m in GRP which represents 0.1 per cent of the regional total (\$161.25m).
- Approximately one fte job which represents 0.02 per cent of the regional total (2,262 fte jobs).
- Approximately \$.10m in household income which represents 0.1 per cent of the regional total (\$91.37m).

Because the reduced access to the fishery will be permanent, the impacts reported in Table ES1 are an estimate of the on-going, annual impact. The State Government has committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above.

Table ES1 Regional economic impact of marine park zoning

Sector	Output		Employment ^a		Household Income		Contribution to GRP	
	(\$m)	%	(fte jobs)	%	(\$m)	%	(\$m)	%

Source: EconSearch analysis

The economic impacts could be greater as the estimated displaced catch may understate the actual catch in some sanctuary zones if they are located on important fishing grounds (hot spots). Impacts could also be over-estimated if sanctuary zones avoid hot spots (Ward and Burch 2012; Stevens et al. 2011a and 2011b). The zoning process attempted to avoid impacts on fishing by avoiding important fishing grounds. PIRSA has advised that statewide some draft sanctuary zones are located on important fishing grounds (hotspots), however advice specific to this park has not been provided. According to industry-derived estimates of displaced catch (which have yet to be reviewed by SARDI), the aggregate regional impacts could be slightly lower at less than 1 fte job and \$0.08m in GRP.

The potential cumulative impact of the proposed extension to and revised zoning of the Commonwealth Great Australian Marine Park and the proposed Western Eyre Commonwealth Marine Reserve may place further pressure on fishing business viability.

Although the aggregate quantified impacts may not appear large in absolute terms, the economy of Kangaroo Island is a very dependent one with a high level of reliance on agriculture and fishing as the core drivers of economic activity. Indeed of the 687 businesses in on Kangaroo Island approximately 52 per cent are classified in the agriculture, forestry and fishing sector.

However, unemployment on Kangaroo Island is relatively low (3.9 per cent at June 2011) when compared with the state average (5.2 per cent). This suggests that alternative regional opportunities for unemployed labour may be available over time, depending on the skills of those seeking work and the skills demanded by potential employers.

Although the aggregate quantified impacts are not large for the Southern Kangaroo Island Marine Park they will be compounded with the impacts of the Encounter and Western Kangaroo Island Marine Parks.

Aquaculture

There are currently no aquaculture operations in this marine park and any future development will need to be consistent with policy commitments, marine park and aquaculture related legislation (PIRSA, pers. comm., 27 June 2012).

Tourism

The actual placement of sanctuary zones is unlikely to place real restriction on recreational fishing with sanctuary zones over highly fished areas limited. However, the perception that recreational fishing opportunities will be restricted by implementing 'no-take' zones is real. So there is potential for a downturn in fishing-based tourism in the short-term until visitors are informed and convinced of the actual situation on the water. In the long-term, managed marine parks will provide certainty that the marine environment within them is being protected and this may support the growth of the ecotourism industry, provided the necessary investment in tourism infrastructure and support services is undertaken. Other, non-extractive tourism, such as diving, is likely to benefit from the implementation of sanctuary zones.

Property prices

Given that the overall impact on the region is not expected to be large in absolute terms, the impact on property values is, similarly, not expected to be significant. States of Australia have introduced marine parks with sanctuary zones in the last decade without any known long-term effects on property values. External factors notwithstanding, the trend in Kangaroo Island residential property prices illustrated in the regional socio-economic profile is unlikely to be affected by the proposed marine park zoning.

Port, harbour and shipping operations

There are no ports or harbours in this marine park nor any other major developments planned.

Mining

No mineral, petroleum or geothermal licences or leases are currently located within this marine park.

Coastal development

There are no significant projects or infrastructure in or known to be planned for this marine park.

Social Impacts

The overall social impacts of the Southern Kangaroo Island Marine Park on communities living on Kangaroo Island are expected to be low given the magnitude of the economic impacts that have been projected. Commercial fishing is an important source of employment and is estimated to contribute 74 jobs to employment in the region, compared with tourism which contributes 960 jobs. Economic impact assessment identifies loss of one commercial fishing-related job in a region of low unemployment and low levels of measured relative disadvantage. The State Government has committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above. The impact on recreational fishing is considered to be minimal with adjustments in zoning designed to minimise any potential negative impacts. Consequently, any impact on local community identity as a fishing centre, and on fishing as a way of life is also likely to be low.

No impacts on local government operations, infrastructure and revenue or compliance related activities are expected as a result of the proposed draft zoning.

Experience elsewhere in Australia and internationally, suggests that a range of benefits from the establishment of marine parks become evident over time. These include increased opportunities for education about marine life and conservation, and increased tourism and ecotourism opportunities. This experience indicates that these benefits usually take approximately five years to be evident, and that in the earliest stages of marine protected areas being developed, local communities are more likely to identify possible negative impacts than potential benefits. It takes time to observe how the park's ecological and economic impacts evolve, with social impacts (positive or negative) flowing from these.

Marine parks have broad support in the South Australian community. Market research commissioned by the state government between 2006 and 2012 found strong support for the concept of marine parks among South Australians with approximately 85 per cent in favour of them in 2012 (87 per cent support in metropolitan Adelaide and 82 per cent support in regional areas). Those least likely to support marine parks have been fishing groups (in 2009 55 per cent of respondents who did not support marine parks identified restricted fishing as the reason, this dropped to 39 per cent in 2012). Between 2011 and 2012 the market research findings identify a decline in those who believe they will have limited access to marine parks and an increase in those who associate swimming, boating and snorkelling with marine parks.

A critical factor in determining the ultimate impact of marine parks is how well local communities are able to adapt to change and how cohesive they are in supporting each other through change. The level of support provided by government to adjust to change is also crucial. One very important factor that affects community attitudes is

how informed they are, and feedback from market research and marine park local advisory groups, as well as analysis of media reports indicates a gap in this information. In particular, increasing communities' understanding of the scientific rationale underpinning marine protected areas, and the benefits that these can bring, needs to be enhanced. This is one of the functions of impact assessment which is best conceived of as a continuous process informing both the establishment and operation of marine parks.

1. Introduction

In 2009, the SA Government established 19 marine parks covering approximately 44 per cent of the State's waters. The Government has prepared a draft management plan for each of South Australia's marine parks. These draft management plans include a number of proposed zones where certain activities will be restricted for biodiversity conservation purposes. Global scientific research is demonstrating that marine parks have the potential to conserve coastal and marine biodiversity (PISCO 2007).

However, it is recognised that the zoning of marine parks will come with some costs such as restrictions on commercial and recreational activities. The *Marine Parks Act 2007* provides that when the Minister prepares a draft management plan, an impact statement of the expected environmental, economic and social impacts of the management plan must also be prepared. The impact statements are designed to assist the community to understand the projected impacts of the draft management plans¹ during public consultation.

The Department of Environment, Water and Natural Resources (DEWNR) contracted EconSearch Pty Ltd and its project partners to provide:

1. Impact statements for each of the 19 marine parks which describe both positive and negative impacts of implementing the draft management plans on the local marine ecosystems, economies and communities. These impact statements are to comply with the SA Government's Regional Impact Assessment Statement Policy (RIAS) and with Section 14(4)(c) of the *Marine Parks Act 2007*.
2. A state level Cost Benefit Analysis (CBA) of the proposed management of the 19 marine parks through zoning regulations. The CBA is to comply with the SA Governments Regulatory Impact Statement (RIS) Policy, but is not a RIS in its own right. The results of the CBA are presented in the *Marine Park Impact Statements Main Report*.

1.1 Marine Park Planning Process

Marine parks in South Australia will be zoned for multiple-uses, providing for varying levels of conservation, recreational and commercial use. Zoning provides the basis for the management of marine parks, in accordance with the objects of the *Marine Parks Act 2007*. Figure 1–1 describes the marine park zones.

The Government has developed a table of activities and uses that occur in the marine environment and summarises how these activities are expected to be managed in each marine park zone. The prohibitions and restrictions in the matrix will be included in regulations that will be finalised when marine park management plans are adopted (see Appendix 2).

¹ The impact statements were prepared before the draft management plans were finalised.

Figure 1–1 Marine Park Zones

<i>The management plans will contain the following management zones:</i>	
General managed use	A zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing ecologically sustainable development and use.
Habitat protection	A zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing activities and uses that do not harm habitats or the functioning of ecosystems.
Sanctuary	A zone primarily established so that an area may be managed to provide protection and conservation for habitats and biodiversity within a marine park, especially by prohibiting the removal or harm of plants, animals or marine products.
Restricted access	A zone primarily established so that an area may be managed by limiting access to the area.
<i>To accommodate site specific community needs, within a marine park there may be:</i>	
Special purpose area	An area within a marine park, identified as a special purpose area and with boundaries defined by the management plan for the marine park, in which specified activities, that would otherwise be prohibited or restricted as a consequence of the zoning of the area, will be permitted under the terms of the management plan.

Source: Adapted from sections 4 and 5, *Marine Parks Act 2007*.

The suite of protection provided by this framework will assist with the delivery of the objects of the *Marine Parks Act 2007*. Specifically:

- a) “to protect and conserve marine biological diversity and marine habitats by declaring and providing for the management of a comprehensive, adequate and representative system of marine parks; and
- b) to assist in—
 - i. the maintenance of ecological processes in the marine environment;
 - ii. the adaptation to the impacts of climate change in the marine environment;
 - iii. protecting and conserving features of natural or cultural heritage significance;
 - iv. allowing ecologically sustainable development and use of marine environments; and
 - v. providing opportunities for public appreciation, education, understanding and enjoyment of marine environments.”

The Government dedicated significant resources to gathering environmental, economic and social knowledge and working with community and key stakeholder interests to develop draft park zoning. Key elements of this process are described in Table 1-1.

Table 1-1 Public consultation process to date

Initiative	Timeframe
Statewide consultation on Liberal Government draft policy document <i>Marine protected areas: a shared vision</i> . 23 public meetings/information sessions held involving some 1600 people.	2001/02
Labor Government policy <i>Blueprint for the SA representative system of marine protected areas</i> developed following the above consultation process, with further consultation undertaken with key stakeholders and across relevant government agencies.	2003/04
The Draft <i>Encounter Marine Park Zoning Plan</i> was released for 3 months' public consultation as a pilot process to test key concepts for statewide application. 427 submissions were received. Local consultation was undertaken targeting the Fleurieu Peninsula, Kangaroo Island and Adelaide. 15 public information days and 48 stakeholder group meetings were held.	2005
The Marine Parks Draft Bill (2006) was developed and 3 months' statewide consultation was undertaken on this, involving 16 regional public meetings/information sessions and 112 submissions.	2006-07
On 29 January 2009, the Minister for Environment and Conservation released the outer boundaries of 19 new marine parks, for a public consultation period of three months.	2009
During the comment period, approximately 15,000 copies of the consultation brochure with submission form were distributed through various means . By the end of the three month consultation 2,357 submissions had been received by the Department for Environment and Heritage (DEH) representing a total of 3, 295 individual respondents.	
In addition, 56 public information days were held and 4,800 people were estimated to have been directly engaged in the consultation process.	
Nearly 150 groups provided comment on either the marine parks network or one or more individual marine parks. These included key interest groups, organisations, businesses, associated bodies, local governments, not for profit organisations, community groups and recreational clubs.	
Three regional Pilot Working Groups with multi sectoral representation were established to advise on outer boundary design with minimum three meetings of each.	
Outer boundaries of seven Parks were amended as a result of the consultation process.	
Phase 1 - Management planning for South Australia's marine parks network. A Statewide community engagement process was undertaken involving:	Late 2009 onwards
<ul style="list-style-type: none"> 13 Marine Park Local Advisory Groups (MPLAGs) established across the state, and the Great Australian Bight Marine Park Consultative Committee (GABMPCC). 67 public MPLAG meetings were facilitated. Peak stakeholders were invited to provide early advice on their preferred zoning for marine parks. 	
<ul style="list-style-type: none"> A key stakeholder forum was held where broad agreement was reached on the priority areas for conservation 	April 2012

Source: Adapted from SA Government Submission to the Marine Parks Select Committee, 2011.

The Scientific Working Group and Marine Parks Council of South Australia are independent advisory bodies providing advice to the Minister. In finalising draft management plans for public consultation, both the Scientific Working Group and Marine Parks Council assessed the merits of the draft zoning schemes and strategies for management against the objects of the *Marine Parks Act 2007* and provided the Minister with independent advice.

In finalising draft management plans, discussions were held with members of the Marine Parks Steering Committee as representatives of relevant Government agencies. The Steering Committee considered whether draft management plans took appropriate consideration of all relevant statutory requirements and effectively implemented the Government's policy commitments for marine parks.

Based on the collective advice from MPLAGs, other community members, peak stakeholders and discussions across relevant agencies, the Government developed a

draft management plan with zoning for each of the 19 marine parks for formal public consultation. The draft management plans are currently out for public consultation.

1.2 Policy Commitments

The Government has made a range of policy commitments² to help ensure South Australian lifestyles and livelihoods are maintained, and to provide more certainty for the industries that use the marine environment. The commitments informed the design of zoning for each marine park, and include:

- access to specific key recreational and commercial fishing sites through appropriate zoning
- access for existing and future aquaculture development through appropriate zoning
- certainty that marine parks will not affect access to, or use of, jetties, break walls or boat ramps
- accommodation of approved coastal development as well as future development and infrastructure needs
- accommodation of approved mining, petroleum and geothermal development activities
- accommodation of shipping and harbor activities
- certainty that marine parks will not create an extra approval process as government agencies will work together to streamline administration.

1.2.1 Displaced Commercial Fishing Policy Framework

The adoption of marine park management plans with zoning will displace some commercial fishing activities. This Policy Framework³ describes the steps that support this process:

1. Avoid displacement by pragmatic zoning;
2. Redistribute effort only where possible without impacting ecological or economic sustainability of the fishery;
3. Market-based buy back of sufficient effort to avoid impact on the fishery;
4. Compulsory acquisition as a last resort option.

The Government expects that market based buy back of effort and any necessary compulsory acquisition will be undertaken under the authority of the Minister for Agriculture, Food and Fisheries. The Minister for Sustainability, Environment and Conservation will consider any fair and reasonable compensation in accordance with section 21 of the *Marine Parks Act 2007*, and it is envisaged that regulations will be drafted to support this process.

² A complete list of the commitments is available at Appendix 2 of the *South Australia's Marine Parks Network Explanatory Document* which accompanies the draft management plans.

³ The Displaced Commercial Fishing Policy Framework is provided at Appendix 5 of the *South Australia's Marine Parks Network Explanatory Document*

2. Method of Assessment

This study undertook both an impact analysis and an economic evaluation, in the form of a cost benefit analysis (CBA), of implementing the marine park draft management plans. The method and results of the CBA are presented in the Main Report.

Impacts of implementing the draft management plans were assessed against a base case scenario of no management plans. This also applies to the CBA. The base case is not static, and requires an understanding of the existing trends in natural resource, economic and social conditions. There are external factors which influence both the 'with management plan' and the base case scenarios that need to be taken into consideration.

2.1 Ecological

The ecological impact assessment was required to:

1. describe the current status of the marine habitats, plants and animals in each marine park;
2. discuss (in qualitative terms) the services that the protected ecosystems provide to South Australians (where not possible to measure their economic value);
3. identify the range of activities that impact on the environment and quantify how the draft management plans will influence the marine environment, against a base case of no management plans;
4. assess the implications of the management plans in 5, 10 and 20 years on species diversity and abundance, marine habitats, and ecosystem function;
5. include case studies that highlight the potential impacts of the draft management plans on iconic and threatened species and contribute to case studies that effectively communicate the trade-offs between the different environmental, social and economic factors.

The outcomes for Items 1, 4 and 5 listed above are included in each individual park statement and can be found in Section 4 of this impact statement. The outcomes for Item 2 are generic across the park network and are briefly introduced in Section 3.1 of this impact statement and detailed in Appendix 4 of the Main Report (see Ecosystem services). The outcomes for Item 3 inform the outcomes for Items 4 and 5, and are discussed in a generic sense in Appendix 1.1.4 of the Main Report. It should be noted that despite the broad spectrum of activities that can potentially be influenced by zoning under the *Marine Parks Act 2007*, the proposed zones have been located in such a manner that very few current activities will be affected. The most widespread of these is fishing, with the cessation of all forms of fishing inside most SZs and RAZs (with exceptions relating to existing restrictions), and benthic trawling inside HPZs of six parks. Furthermore, predicting species and ecosystem responses to the cessation of fishing is highly complex (see Appendix 1.3 of the Main Report) and, compared to other activities, there are generally more data available to inform the assessment. Consequently, the extent and depth of discussion on fishing-related responses may appear to be disproportionate in comparison to other activities, but this is not intended to place any particular emphasis on fishing as a threatening process.

The process of ecological impact assessment undertaken for the current report can essentially be summarised by three main steps:

1. Activities and uses: determining the range of activities and uses that potentially impact on the marine environment under current management regimes, and then determining how the marine park zoning and management arrangements will influence them.
2. Baseline: determining the current status of the marine species, habitats, and ecosystems in the marine parks; what are we comparing future changes against?
3. Predictions: assessing the implications of the marine park zoning and management arrangements in 5, 10 and 20 years on species, habitats, and ecosystems against the case of no marine park zoning and management arrangements.

A total of 205 species or species groups, 11 habitat types, and 11 habitat-based ecosystem types were selected for the impact assessment (see Appendices 2, 4 and 6 of the Main Report).

Further details of the methodology can be found in Appendix 1 of the Main Report

Further details of the methodology can be found in Appendix 1 of the Main Report.

2.2 Economic

At the regional level, the economic impact analysis was based on the input-output method. This method provides a standard approach for the estimation of the economic impact of a particular activity. The input-output model is used to calculate industry multipliers that can then be applied to various change scenarios, as has been done in this study.

For this impact assessment an input-output model was constructed specifically for the Kangaroo Island region (see Map in Appendix 1). The model is known as a Regional Industry Structure and Employment (RISE) model which is an extension of the standard input-output model that is used within the SA Government for various types of impact assessment.

At a micro level individual businesses could be impacted by marine parks. To assess the impact on commercial fishing operations representative financial models of fishing businesses were constructed for each of the relevant fishing sectors. These models were based on financial information collected and reported by EconSearch (2010) over the past 13 years. The results of the financial modelling provided input into the regional RISE model to estimate impacts on the regional economy.

The principal driver for change in fishing industry operations and profitability is lost access to the resource. Estimates of displaced catch were provided by the South Australian Research and Development Institute (SARDI). PIRSA Fisheries and Aquaculture provided detailed information on the recreational and commercial fisheries relating to the:

- current condition of the fishery;
- outlook for the fishery without marine parks management plans;
- marine parks impacts on the fishery; and
- measures to mitigate anticipated impacts.

Discussions were also held with representatives of each of the commercial fishing sectors, recreational fishing, mining, various State Government departments and Local Government (see Appendix 3). These discussions provided insights to the likely responses of businesses and organisations associated with or members of the interviewee's organisation. Because of time and resource constraints it was not possible to undertake discussions with or collect data from all potentially impacted parties.

Because some of the activities that could potentially be impacted by marine parks are related to the tourism sector, the Southern Kangaroo Island RISE model includes explicit specification of the regional tourism industry. This was done by following the standard ABS method of constructing tourism satellite accounts.

The following indicators of economic impact were generated using the economic modelling framework described above:

- value of output,
- gross regional product (GRP),
- household income and
- employment.

(Value of) Output is a measure of the gross revenue of goods and services produced by commercial organisations (e.g. the value of processed seafood products) and gross expenditure by government agencies. Total output needs to be used with care as it can include elements of double counting when the output of integrated industries is added together (e.g. the value of processed seafood includes the beach value of the fish).

Gross regional product (GRP) is a measure of the net contribution of an activity to the regional economy. GRP is measured as value of output less the cost of goods and services (including imports) used in producing the output. In other words, it can be measured as the sum of household income, 'gross operating surplus and gross mixed income net of payments to owner managers' and 'taxes less subsidies on products and production'. It represents payments to the primary inputs of production (labour, capital and land). Using GRP as a measure of economic impact avoids the problem of double counting that may arise from using value of output for this purpose.

Household income is a component of GRP and is a measure of wages and salaries paid in cash and in-kind, drawings by owner operators and other payments to labour including overtime payments, employer's superannuation contributions and income tax, but excluding payroll tax.

Employment is a measure of the number of working proprietors, managers, directors and other employees, in terms of the number of full-time equivalent (fte) jobs. Employment is measured by place of remuneration rather than place of residence.

Further details of the economic method can be found in Section 3.2 of the Main Report.

2.3 Social

The identification of potential social impacts of different marine park zoning options has been informed by a review of relevant research, analysis of the Environmental, Economic and Social Values Statements developed for each park, a review of the minutes and available correspondence of Marine Parks Local Advisory Groups

(MPLAG), an overview of local media reports on the parks, an examination of market research on community perspectives on the establishment of marine parks, an assessment of MPLAG member perspectives on zoning options and targeted impact assessment interviews. An analysis of SAMPIT⁴ data was also undertaken to identify the potential impact of the zoning proposal on recreational fishing. An examination of the impacts of the establishment of marine parks in relevant jurisdictions was undertaken to inform the design of the social impact assessment tool.

A 'Marine Parks Social Impact Assessment Tool' (MPSIAT) was developed by the Australian Institute for Social Research to identify and compare potential social impacts from the preliminary DEWNR marine park sanctuary zones (DEWNR zones) and zones resulting from Marine Park Local Advisory Groups advice (MPLAG zones). MPSIAT respondents provided perspectives on impacts of zoning proposals based on their experience and expertise. Final MPLAG zone advice was normally based on a majority view. While this approach to decision making delivers a decision it does tend to obscure differences in views and opposing views on potential impacts from the perspectives of different stakeholders. The MPSIAT has been designed to shed light on these differences in order to identify a range of potential social impacts identified by key stakeholders. In the context of the impact assessment process these perspectives can inform our understanding of what the social impacts of the draft zoning proposal are likely to be. This impact assessment statement helps to identify what the likely social impacts will be.

This social impact assessment provides baseline perspectives on potential positive and negative impacts across five domains:

- Education and wellbeing;
- Culture and heritage;
- Recreation and fishing;
- Population and housing; and
- Community.

Social vulnerability of the Impact Region associated with each Marine Park has been determined through a combination of Socio-Economic Indexes for Areas (SEIFA) indexes, population (health, family, education, Indigenous status) and economic characteristics (unemployment, job losses).

The SEIFA Indexes presented here provide a measure of the socio-economic disadvantage for the Impact Regions associated with Marine Parks at the time of the 2006 Census⁵. We have included figures from the *Index of Relative Socio-economic Disadvantage*, the *Index of Economic Resources* and the *Index of Education and Occupation*. Each of these provides a slightly different view of the socio-economic profile and potential vulnerability of each region.

⁴ The South Australian Marine Parks Information Tool (SAMPIT) is a computer tool designed to gather information from community members about their favourite fishing spots and areas they believe need protection. Data is collected and reported by 'grid cell'. SAMPIT data for 1,739 people is available including 1311 recreational fishers. Quality control by the Department of Environment and Natural Resources included cross-verification of legitimate naming and activities from the data provided (DENR 2010b).

⁵ Australian Bureau of Statistics. 2008. *Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Australia - Data only 2006 (cat. no. 2033.0.55.001)* and *Information Paper: An Introduction to Socio-Economic Indexes for Areas (SEIFA), 2006 (cat. no. 2039.0)*. Note SEIFA Indexes for the 2011 Census are not yet available.

SEIFA values have been standardised with Australia (as a whole) having a value of 1000 and a standard deviation of 100, low scores indicate greater disadvantage. South Australia sits below the Australian average with a relative disadvantage level of 979. At the SLA level, South Australian SEIFA relative disadvantage scores range from a low of 527 through to 1107.

A range of SEIFA values at the statistical local areas (SLA) level are associated with the Impact Regions, noting between one and seven SLAs are associated with each Impact Region. These capture information about average socio-economic conditions for the SLA and Impact Region but do not account for variation of individuals within the areas. Areas identified with relative disadvantage may well have individuals and sub-regions that are relatively advantaged. We have also presented individual variables to provide additional information about the potential social vulnerability of SLAs associated with the Impact Regions.

Where an Impact Region has an SLA falling within the top decile in South Australia (i.e. most disadvantaged) a ranking of *High* is provided. A ranking in the second highest decile is ranked as *Moderate*. Where there are moderate to high ranking SLAs they are rated to as *Moderate-High*.

It is important to acknowledge that the impact of marine parks on employment and wellbeing is likely to vary significantly across regions and will be mediated by a range of social and economic factors including:

- the age and retirement intentions of fishers;
- the ability of fishers to adapt to changes within the region in which they fish;
- the opportunities available to fishers and those dependent on fishers to work in other industry sectors;
- the impact of compensation packages provided to fishers on their financial circumstances and the local economy;
- the influence of lifestyle attachment and importance of place in the lives of fishers
- the extent to which the existence of marine parks might generate employment in tourism, research, education and other sectors.

3. Southern Kangaroo Island Marine Park Description

Covering 673 km² and including parts of the Eyre and Coorong Bioregions, the Southern Kangaroo Island Marine Park abuts the southern coast of Kangaroo Island between D'Estrees Bay and the western end of Seal Bay Conservation Park. It also includes North Rock, Young Rock and South West Rock. The marine park also overlays Seal Bay-Bales Beach Aquatic Reserve, partially overlays the Seal Bay Conservation Park and borders the Cape Gantheaume Wilderness Protection Area (DENR, 2010a).

A map of the Southern Kangaroo Island Marine Park and the proposed draft zoning is provided at the end of this statement at Appendix 5.

3.1 Ecological Description

Habitats of Southern Kangaroo Island Marine Park include high energy sandy beaches, exposed cliffs, rocky headlands, rocky shores, wave-cut shore platforms, fringing reefs, and deep reefs interspersed by sandy seafloors. There are also dune systems along Cape Gantheaume, Seal Bay and Bales Beach. Adjacent to the long sandy beach and dunes of D'Estrees Bay, the slightly more sheltered waters support some of the largest seagrass beds on the south coast of Kangaroo Island (DENR, 2010a).

South-west of Cape Gantheaume lies the small group of unique offshore algae-covered granite knolls (North Rock, South-west Rock and Young Rock) in relatively deep water (> 50 m), where blacklip abalone are known to thrive (DENR, 2010a).

For the current impact assessment, coastal and marine habitats/ecosystems were divided into the following types: saltmarsh, mangrove, intertidal sand flat, subtidal sand, intertidal seagrass flat, subtidal seagrass, intertidal reef, subtidal high profile reef, subtidal low profile reef, beach, and pelagic. The extent of these habitats (except pelagic) mapped for this park are shown in Table 3-1.

These eleven habitats/ecosystems, and others not considered in the current impact assessment, support thousands of species (Edyvane, 1999, Baker, 2004). They also offer goods and services that are of economic, social and environmental value to SA. The economic value of these services can be difficult to determine but to illustrate the importance of valuing coastal marine habitats in SA a description of the necessary goods and services that need to be taken into account is provided. The goods and services provided by coastal, marine and estuarine habitats were classified under four headings by McLeod and Leslie (2009). These headings were:

- Life supporting services,
- Resources and products,
- Maintaining Earth's living space and
- Recreational and cultural services.

Each one of these headings was divided into categories that could be more easily valued, either directly or as a service. A more detailed discussion of these goods and services is provided in Appendices 4 (habitat specific information) and 5 (consolidated discussion) of the Main Report.

Table 3-1 Summary of habitats

Zone	Shoreline habitats (km of coastline)						Benthic habitats (km ²)				
	Beach	Intertidal sand	Intertidal seagrass	Intertidal reef	Mangrove	Saltmarsh	Subtidal high profile reef	Subtidal low profile reef	Subtidal sand	Subtidal seagrass	Unmapped
RAZ-1	2.1			2.4				3.3	0.6		
SZ-1	6			8.5				51.3	5.4		19.6
HPZ-1	25.1			28.7			10.9	75.9	31.7	12.6	241.5
HPZ-2											219.5
Total	33.1			39.5			11	130.6	37.8	12.6	480.5

Source: based on GIS data provided by DEWNR.

Zones are labelled as shown in Appendix Figure 5-1.

Intertidal habitats are expressed as shoreline lengths to be consistent with DENR (2010a), and/or because of limitations of the available GIS data, and therefore do not provide a complete indication of the extent of these habitats within the park.

Totals may differ slightly from column sums due to rounding.

3.2 Socio-economic Profile

The socio-economic profile provided in Appendix 1 presents a statistical summary of key economic and social information for the Kangaroo Island region and, where possible, South Australia (SA). The profile brings together a wide range of existing Australian Bureau of Statistics (ABS) data and some non-ABS data. It has been designed, at a broad level, to aid understanding of the economic and social structure of the region, to indicate how the Kangaroo Island region contributes to the State economy and to illustrate trends in economic growth or decline.

Kangaroo Island is located south-west of Adelaide (Figure 1, Appendix 1). The one statistical local area (SLA) that comprises the region is Kangaroo Island (DC). The Kangaroo Island regional economy is relevant to the Western Kangaroo Island (MP16), and Southern Kangaroo Island (MP17) marine parks. Table 3-2 presents a summary of the key economic and social information detailed further in Appendix 1.

Some key points from the detailed socio-economic profile in Appendix 1 are as follows:

- The estimated resident population of Kangaroo Island was almost 4,700 persons in 2010/11.
- Compared with the age distribution of the state as a whole, Kangaroo Island has a slightly higher than average concentration of younger people (aged 0 to 14 years), a smaller than average share of persons aged 15 to 64 years and a similar share of people aged 65 and over.
- The total population on Kangaroo Island is projected to increase by around 20 per cent by 2026 and the SA population is expected to increase by a similar amount, approximately 23 per cent.
- The unemployment rate on Kangaroo Island was almost 3.9 per cent in the June quarter of 2011, below the state rate.

- Of the 687 businesses operating on Kangaroo Island, over 50 per cent were classified in the agriculture, forestry and fishing sector and 10 per cent were in the construction sector.
- Over the period 2000/01 to 2009/10, the mean taxable income (in nominal terms) increased by 48 per cent on Kangaroo Island (\$43,900 in 2009/10) and 54 per cent in SA as a whole (\$54,350 in 2009/10).
- Median dwelling (units and houses) prices increased by 176 per cent on Kangaroo Island (\$235,000 in 2010/11) and 197 per cent in SA as a whole (\$357,500 in 2010/11) over the period 2000/01 to 2010/11.
- In 2009/10, the top four contributors to total jobs in the region were the agriculture forestry and fishing (22 per cent), retail trade and accommodation, restaurants and cafes (both 14 per cent) and health and community services (8 per cent) sectors.
- In 2009/10, the top contributors to GRP were the agriculture, forestry and fishing (20 per cent), transport and storage (10 per cent), ownership of dwellings (9 per cent), and accommodation, cafes and restaurants (8 per cent) sectors.
- The commercial fishing and tourism industries are important to the local economy in terms of contributing to jobs and GRP. Directly and indirectly commercial fishing and aquaculture contributed 3 per cent of GRP (\$4.7 million) and 3 per cent of employment (74 fte jobs) in 2009/10. By comparison, the tourism sector contributed 38 per cent of GRP (\$62.0 million) and 43 per cent of employment (960 fte jobs).

Table 3-2 Summary of key economic and social indicators for Kangaroo Island

Indicator	Kangaroo Island	SA	Kangaroo Island as a proportion of SA
Population, 2010/11 (no.)	4,666	1,656,299	0.3%
Birth Rate, 2009/10 (births/1000 residents)	11.8	12.2	-
Death Rate, 2009/10 (deaths/1000 residents)	6.9	7.9	-
Age Distribution, 2009/10:			
Proportion of Population aged 0-14	19%	18%	-
Proportion of Population aged 15-64	65%	67%	-
Proportion of Population aged 65+	16%	16%	-
Dependency Rate, 2009/10:			
Child	29%	27%	-
Aged	24%	23%	-
Total	54%	50%	-
Population Projection, Increase from 2006 to 2026	20%	23%	-
Employment, June qtr 2011:			
Labour Force (no.)	2,678	867,500	0.3%
Unemployed (no.)	105	45,300	0.2%
Unemployment Rate	4%	5%	-
Participation Rate, 2009/10	69%	63%	-
Businesses, June 2009 (no.)	687	141,625	0.5%
School Enrollments, 2011	620	247,356	0.3%
Tertiary Enrollments, 2011	411	208,706	0.2%
Non-school Qualifications, 2006	838	595,379	0.1%
Mean Taxable Income, 2009/10 (\$)	43,766	54,349	-
Proportion of Taxable Individuals, 2009/10	64%	74%	-
Value per Building Approval, 2010/11 (\$)	255,153	236,269	-
Median Dwelling Price, 2010/11 (\$)	235,000	357,500	-
Commercial Fishing, Ave/yr 2000/01 to 2009/10:			
Catch (t)	1,407	47,581	3.0%
Value of Catch (\$m)	10	202	5.0%
Charter Boats, Ave/yr 2007/08 to 2009/10 (no. of fish)	20,333	146,341	13.9%
Recreational Fishing, 2007/08:			
Fishers (no.)	11,190	236,463	4.7%
Days Fished (no.)	32,743	1,054,200	3.1%
Gross Regional Product, 2009/10 (\$m)	161	80,356	0.2%
Employment, 2009/10 (fte)	2,262	774,953	0.3%
Tourism, 2009/10 (\$m)	121	4,524	2.7%
Other Regional Exports, 2009/10 (\$m)	93	26,757	0.3%
Regional Imports, 2009/10 (\$m)	235	40,573	0.6%

4. Summary of Impacts

4.1 Ecological

This section presents the summarised results of the ecological impact assessment for this particular park. As such, output tables and other information presented that are not otherwise referenced, represent the professional judgement of the authors. Full details behind the assessments can be found in the Main Report and accompanying appendices (see cross-references below).

4.1.1 Habitats

In general the habitats within the park can be considered to be in a condition comparable to the time of European settlement. The land adjacent to D'Estrees Bay is vacant, has housing allotments or is grazed, but most of the park is adjacent to the Cape Gantheaume Wilderness Area/Conservation Park, or Seal Bay Conservation Park, which collectively extend several kilometres inland. The park is therefore unlikely to be subject to land-based threats.

The zoning plan will influence future activity in all zones and applies specific restrictions on future activity within HPZs, SZs and RAZs, with respectively increasing protection across this hierarchy of zone types (see Appendix 1.2.6 of the Main Report). The Southern Kangaroo Island Marine Park has about 88 per cent, 11.3 and 0.6 per cent of the total park area designated as HPZ, SZ and RAZ, respectively.

The RAZ, SZs and HPZs will assist with the future protection of habitats from a number of uses that are potentially damaging (see Main Report). For the Southern Kangaroo Island Marine Park, some of the habitats of particular conservation note are the offshore algal-covered granite knolls (HPZ-2), the diversity of intertidal reef formations across the park, and the seagrass meadows in D'Estrees Bay (HPZ-1) (DENR, 2010a). The beach habitat for the Australian sea lion at Seal Bay is currently within the existing Seal Bay Aquatic Reserve (RAZ-1) and SZ-1 includes the Bales Beach Aquatic Reserve, but SZ-1 provides a buffer around these areas of 3 km to the west, 800 m to the east, and up to 6 km offshore.

4.1.2 Species

4.1.2.1 Threatened and protected species

A large number of marine species are protected in SA under either State and/or Federal legislation, including all syngnathids (seahorses, seadragons, pipefishes, pipehorses), all marine mammals and most seabirds. Some of these species are also listed as threatened species under either State and/or Federal legislation. It was beyond the scope of this impact statement to assess all of these species, but some of the species or species groups that were identified in the Ecosystem Food Webs (see Appendix 6 of the Main Report) and/or that are a key feature of this particular marine park are considered here. Each of these species is discussed in more detail in Appendix 3 of the Main Report.

The following species may benefit from maintenance and/or improvement of habitats and ecological processes within the park:

- Australian sea lion (threatened and protected species) (breeding sites at Seal Bay and Seal Slide)
- New Zealand fur seal (protected species) (breeding sites at Cape Gantheaume, Berris Point and Cape Linois)
- White shark (threatened and protected species)
- Syngnathids including the leafy and weedy seadragon (protected species)
- Bottlenose and common dolphins (protected species)
- White-bellied sea eagle (threatened and protected species)
- Eastern osprey (threatened and protected species).

Changes in abundance of these species due to the introduction of the proposed management arrangements are not able to be predicted over the next 20 years due to the complexities of ecosystem interactions and/or a lack of data on current status and zone use. Listed threatened species often have individual recovery plans that identify objectives/actions required to mitigate against threatening processes that will ultimately allow recovery of the species. Protection of critical habitat is often identified in these plans as a useful objective, and thus the protection of breeding and aggregation areas under the proposed zoning arrangements should have some positive impact on the Australian sea lion and white shark. Nonetheless, it is unlikely that the main anthropogenic threatening processes to these species (or the white-bellied sea eagle and eastern osprey) will be out-weighed by any potential positive impact from the park zoning and management plan (see Species Profiles in Appendix 3 of the Main Report and Section 4.1.3 below). The population numbers of the Australian sea lion have been declining for many years and may continue declining unless the threat of bycatch in the shark fishery further offshore is addressed (bycatch is occurring in demersal shark gill-nets in a Commonwealth-managed in Commonwealth waters, see Case Study in 4.1.3 below). Nonetheless, SZ-1 is of particular note for threatened and protected species within the Southern Kangaroo Island Marine Park as it:

- includes the waters adjacent to the Australian sea lion breeding colony at Seal Bay
- is adjacent to white-bellied sea eagle and eastern osprey territories.

4.1.2.2 Fished species

South Australia's proposed system of marine parks was designed for biodiversity conservation purposes rather than as a fisheries management tool. Nevertheless, the impact assessment identified that species which are currently fished are most likely to show a direct first-order response over the next 20 years (relative to current uses) to the proposed management arrangements and zonings (see Appendix 1.3 of the Main Report). Therefore the assessment of the impact on 20 indicator fished species has been provided in a specific section here. More detailed discussion on the rationale for selecting the indicator species, and their expected response to protection, can be found in Appendices 1.3.4 and 3 of the Main Report.

Commercial, recreational and charter fishing occurs within the park for a variety of species. The current status of some of the indicator species that were able to be assessed within the sanctuary zone of the park was considered to be at an unnaturally low level (UNLL) compared with a pre-European (pre-fishing) baseline (Table 4-1). A pre-fishing baseline rather than the current baseline is required to enable future

predictions of change because the level of fishing activity prior to protection influences the response following protection (see Appendix 1 of the Main Report). The reduced levels of some species do not reflect poorly on fisheries management in accordance with the principles of ecologically sustainable development. Six reef fish species were considered to be at NL (namely western blue groper, harlequin fish, Bight redfish, swallowtail, and bluelthroat wrasse).

Predicting ecological responses to marine parks is inherently complex and depends on many factors (see Appendix 1.3.7 in the Main Report). In the few instances where it has been attempted, the actual changes have often been different to the predictions (Langlois and Ballantine, 2005). Nevertheless, as required for this assessment, some predictions have been attempted based on a number of assumptions listed in Appendix 1.3.13 of the Main Report. Each species is considered only in isolation and therefore interactions between species also need to be considered when interpreting the potential responses described below (see Section 4.1.3).

Table 4-1 summarises the outcomes of the predictive modelling that was undertaken on a subset of indicator species (see Appendix 1.3 of the Main Report for further details of the methodology, in particular the list of assumptions and limitations in Appendix 1.3.13). Using southern rock lobster as an example, Table 4-1 indicates that the current status of adult southern rock lobster is at UNLL in sanctuary zone SZ-1, which includes reef habitat used by lobster. Under the proposed zoning arrangements, the adults and sub-adults already resident in this proposed sanctuary zone and any post-larval juveniles that then become residents (or recruits) would be protected. Consequently, the potential exists for the size and abundance of adults to increase within these zones after 5 years (shown as +), 10 years (shown as ++) and 20 years (shown as +++) (Table 4-1). Without the proposed zoning arrangements, adult lobsters would continue to be harvested and the population level was assumed to remain as it is today, as indicated by the zeros at 5, 10 and 20 years. Thus the predicted net effect of the proposed zoning arrangements shown in Table 4-1 is a positive increase within SZ-1 across 5, 10 and 20 years⁶. Table 4-1 also shows for southern rock lobster that there is potential for: a spill-over as a result of the population density inside the SZ increasing relative to outside to the point where some lobsters will tend to migrate from the SZ; and increased larval production from inside the SZ due to increased lobster abundance and increased spawning. A similar scenario to southern rock lobster is also predicted for greenlip and blacklip abalone in the same zone (Table 4-1), except that spill-over is unlikely to occur because greenlip and blacklip abalone are highly sedentary (see Species Profile in Appendix 3 of the Main Report). In addition, second-order ecosystem interactions between blacklip abalone and higher order predators may limit their potential to increase (see Section 4.1.3). Density-dependent factors may also ultimately limit any potential increases in the size and abundance of sedentary species such as abalone that may have limited capacity to move out of an area (see Species Profiles in Appendix 3 of the Main Report).

For resident reef fishes of conservation concern and/or which are vulnerable to localized depletion (namely western blue groper, harlequin fish, bluelthroat wrasse, Bight redfish, swallowtail, sea sweep) and which are currently considered to be at NL, there is potential that across 20 years their populations may decline without the proposed zoning plan (as indicated by a – at 20 years), but that they would maintain current levels across the 20 year period with the proposed zoning plan; thus yielding a net positive benefit at 20 years of + (Table 4-1).

⁶ Current management arrangements are aiming for a recovery of lobster populations in the Northern and Southern Zones. Nonetheless, the increase inside SZs would still be expected to be greater than outside, but the net effect of the SZs would be lowered.

Of the other indicator species assessed (and which are not presented in Table 4–1), the following observations were made for the Southern Kangaroo Island Marine Park:

- Species occurring within the park but with insufficient information to enable an assessment include: King George whiting, snapper, southern garfish and southern calamary.
- Species considered as not occurring within the park include: yellowfin whiting, blue swimmer crab, western king prawn, razorfish, mud cockle and Goolwa cockle.

In addition to the species that were able to be assessed, there are numerous other species (target, byproduct, bycatch) that may also respond to or benefit from the cessation of fishing within SZs (see Main Report), and which may be found in the relevant park zones (Table 4-2). By preventing fishing, a range of benefits for species may be realised including (but not limited to): elimination of direct fishing mortality and post-release mortality; more natural age, size structure and sex ratio of populations, age and size at maturity and fish behaviour; and reduced incidence of disease (see Section 6.1.1 and Appendix 1 of the Main Report for further discussion and references). Each of the species listed in Table 4-2 has a known direct interaction with fishing (see Appendix 2 of the Main Report) which justifies their inclusion here. While the impact of the interaction is largely unknown for most species, and is expected to be minor due to the remoteness of the location and existing restrictions in some areas (Seal Bay/Bales Beach), the point is that the interaction will be removed through zoning, providing a positive benefit to those species. For example, the southern blue devil is a long-lived (Saunders et al., 2010), site-attached reef fish (Bryars, 2010) that is incidentally caught as bycatch (e.g. Fowler et al., 2009) but which is susceptible to barotrauma (Saunders et al., 2010) and therefore may have a low rate of post-release survival. The southern blue devil will therefore benefit from protection inside SZs.

Table 4-2 includes some of the more mobile finfish species which may not respond directly to zoning but may potentially increase in abundance within the park because of the proposed overall reduction of commercial and charter fishing effort, as per the PIRSA (2011) policy position. While it was assumed that the removal of this effort would minimise negative impacts on areas outside SZs, there is potential for the abundance of some fished species to decline outside SZs through displacement of recreational fishing effort, possibly offset to some extent by spill-over (see Appendix 1.3.12 of the Main Report). However, it should be reiterated (see Appendices 1.1.2 and 1.3.13 of the Main Report) that the assessment of the proposed management arrangements does not take into account possible alternative management responses over the next 20 years within the existing management framework.

While only one SZ has been proposed for the park (SZ-1), it shows potential for significant measurable responses for several of the indicator fished species, as well as some other species not formally assessed (see Tables 4–1 and 4–2, and Case Study in 4.1.4). As SZ-1 is relatively large, the protection of some species and the buffering effect from activities at the boundaries will be significant.

In addition to possible responses to protection from fishing, many of the fished species will gain long-term positive benefits from protection of the habitats that they rely upon for various stages of their life cycles. These benefits will often be manifested both inside and outside the park boundaries. For the Southern Kangaroo Island Marine Park, protection of habitats is critical for the long-term sustainability of sedentary species such as southern rock lobster and abalone which use the same reef habitat for the adult, post-larval and juvenile stages of their life cycles (Bryars, 2003).

Table 4-1 Potential first-order responses of some indicator species^a.

Species	Life stages	Sanctuary Zones	Habitat usage	Zone visitation	Recruitment to zone	Recruitment source	Current status	Potential first order responses to zoning at 5, 10 and 20 years							Notes
								Measure	Scenario	5	10	20	Spill over	Larval export

^a This table must be read in conjunction with the methods and assumptions detailed in Appendix 1.3 of the Main Report.

Labels in 'Sanctuary Zone' column refer to Appendix Figure 5-1, and are for SZs unless otherwise specified.

Life history information with supporting references is detailed in Appendix 3 of the Main Report

Current status: UNLL = unnaturally low level compared to pre-fishing; NL = natural level compared to pre-fishing. A pre-fishing baseline was required to enable future predictions of change. A current status of UNLL does not necessarily imply that fisheries exploitation of the species is unsustainable.

The + and – symbols do not indicate the magnitude of a change, but are intended to be indicative of the trend over time. The potential responses do not take into account predator/prey interactions that are discussed in Section 4.1.3 below.

Western blue groper is assessed here, rather than in Section 4.1.2.1, as it is fully protected in only part of its range in SA.

Table 4-2 Other species which may respond to or benefit from protection

Common name	Species name
Black cowry	<i>Zoila friendii thersites</i>
Blue morwong	<i>Nemadactylus valenciennesi</i>
Bronze whaler	<i>Carcharhinus brachyurus</i>
Cobbler	<i>Gymnapistes marmoratus</i>
Dusky morwong	<i>Dactylophora nigricans</i>
Dusky whaler	<i>Carcharhinus obscurus</i>
Eagle ray	<i>Myliobatis australis</i>
Estuary catfish	<i>Cnidoglanis macrocephalus</i>
Giant cuttlefish	<i>Sepia apama</i>
Greenback flounder	<i>Rhombosolea tapirina</i>
Gummy shark	<i>Mustelus antarcticus</i>
Horseshoe leatherjacket	<i>Meuschenia hippocrepis</i>
King George whiting	<i>Sillaginodes punctata</i>
Longsnout boarfish	<i>Pentaceropsis recurvirostris</i>
Longsnout flounder	<i>Ammotretis rostratus</i>
Magpie perch	<i>Cheilodactylus nigripes</i>
Maori octopus	<i>Octopus maorum</i>
Moonlighter	<i>Tilodon sexfasciatus</i>
Mulloway	<i>Argyrosomus japonicus</i>
Rock ling	<i>Genypterus tigerinus</i>
Sand crab	<i>Ovalipes australiensis</i>
Sand flathead	<i>Platycephalus bassensis</i>
School whiting	<i>Sillago bassensis</i>
Silver drummer	<i>Kyphosus sydneyanus</i>
Silver trevally	<i>Pseudocaranx georgianus</i>
Smalltooth flounder	<i>Pseudorhombus jenynsii</i>
Snapper	<i>Pagrus auratus</i>
Southern blue devil	<i>Paraplesiops meleagris</i>
Southern calamary	<i>Sepioteuthis australis</i>
Southern fiddler ray	<i>Trygonorrhina dumerilii</i>
Southern garfish	<i>Hyporhamphus melanochir</i>
Spotted wobbegong	<i>Orectolobus maculatus</i>
Wavy volute	<i>Amoria undulata</i>
Weeping toadfish	<i>Torquigener pleurogramma</i>
Yelloweye mullet	<i>Aldrichetta forsteri</i>
Zebrfish	<i>Girella zebra</i>

4.1.2.3 Other species

There are numerous species that are neither listed as protected/threatened nor fished but which may also benefit from maintenance and/or improvement of habitats and ecological processes in the park. Representatives of such species (see Appendix 2 of the Main Report) in the Southern Kangaroo Island Marine Park include: herring cale (*Olisthops cyanomelas*), long-finned goby (*Favonigobius lateralis*), common bullseye (*Pempheris multiradiata*), Noarlunga hulafish (*Trachinops noarlungae*), Wood's siphonfish (*Siphamia cephalotes*), winkles (*Austrocochlea* spp.), brittlestars, featherstar

(*Cenolia trichoptera*), eleven-armed seastar (*Coscinasterias muricata*), short-tail nudibranch (*Ceratosoma brevicaudata*), cartrut shell (*Dicathais orbita*), Roe's abalone (*Haliotis roei*), blue-ringed octopus (*Hapalochlaena maculosa*), *Lepsiella vinosa*, isopods, western black crow (*Nerita atramentosa*), reef crab (*Ozius truncatus*), *Paphies elongata*, *Phasianotrochus eximius*, *Phasianotrochus irisodontes*, red bait crab (*Plagusia chabrus*), gorgonian fan coral (*Mopsella klunzingeri*), green coral (*Plesiastrea versipora*), tulip shell (*Pleuroploca australasia*), sea tulips (*Pyura* spp.), *Thalotia conica*, canopy-forming macroalgae (*Ecklonia radiata*, *Cystophora* spp., *Sargassum* spp. and *Scaberia agardhii*), and meadow-forming seagrasses (*Posidonia* spp., *Amphibolis* spp.).

4.1.3 Ecosystems

The current state of the ecosystems in the park generally reflects the condition of the component habitats and species documented above. Similarly, responses of the ecosystem to the proposed management changes are informed by the predictions for habitats and species above. The proposed management changes also provide for the restoration of more natural predator-prey relationships (among other interactions) for the more resident species within SZs of an appropriate size. This may result in increased abundances of some species, but decreases for others. Most notably, changes might be expected in the reef ecosystem of SZ-1/RAZ-1 where first-order fished species changes have been predicted to occur (see Section 4.1.2.2 earlier).

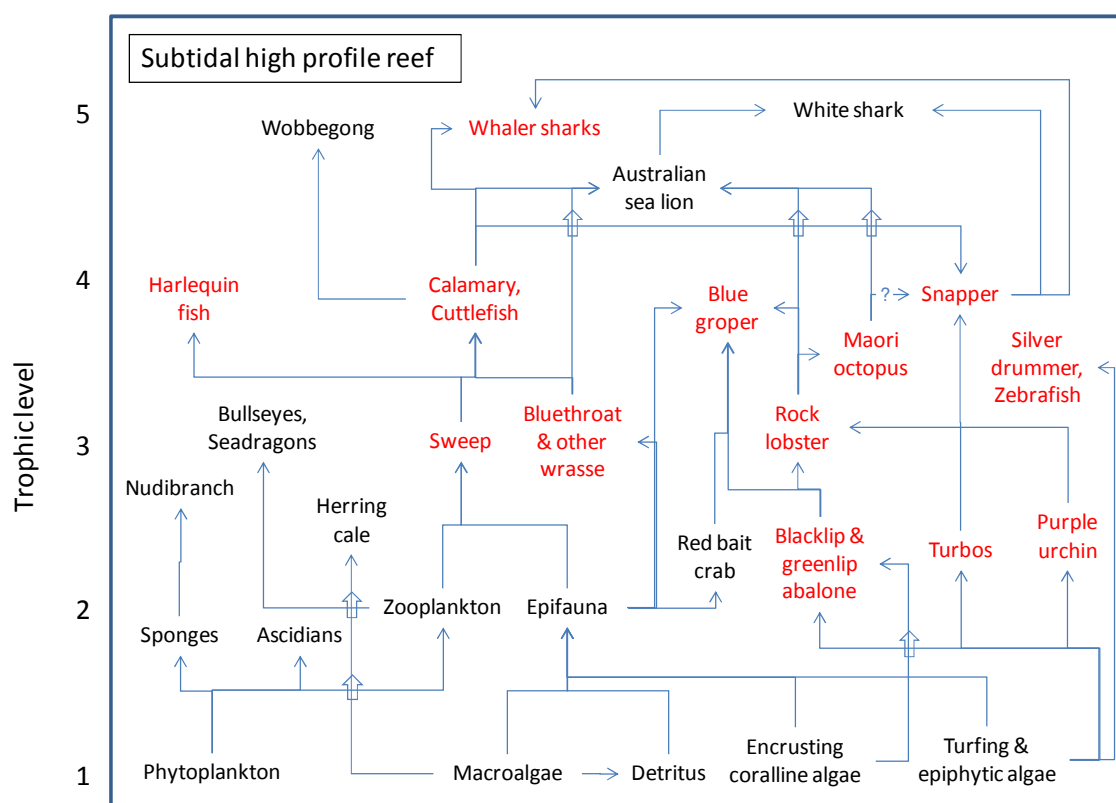

The combined SZ-1/RAZ-1 zone extends for 13–14 km alongshore, and up to 7 km offshore. This is substantially larger than the large reserve (7 km of coast) in Tasmania which resulted in significant changes to the relative abundances of lobster, which increased, and blacklip abalone and urchins, which decreased. Snapper and octopus would also be expected to be key species in a modified food web (see Figure 4–1).

The key feature of SZ-1/RAZ-1, however, is the presence of the large breeding colony of the Australian sea lion, a higher-order predator. This declining population of a threatened species could potentially benefit not only from the increased food production, but also from reduced foraging distances for juveniles and reduced exposure to the threat of gill-nets further offshore in Commonwealth waters (see Case Study below). There may also be changed distribution patterns of other mobile predators in response to localised increases of some prey species.

Natural food webs cannot be fully restored, due to the scales over which the more mobile higher- and middle-order fished species range. However, some increase in abundance of such species is expected as a result of the proposed overall reduction of fishing effort in the marine scalefish and charter fisheries, as per the PIRSA (2011) policy position, and there may be localised flow-on effects for food webs inside the marine parks.

It is also apparent from the simplified food webs (see Figure 4–1 and Appendix 6 of Main Report) that many fished species (shown in red text) and non-fished species are ultimately reliant upon the maintenance of habitat-forming species (such as macroalgae and seagrasses) which lie at or near the base of the food webs, and it is these very habitats that will receive a high level of protection within the marine parks network. Thus the marine parks network will have a positive long-term impact on ecosystems regardless of whether there are zone-specific responses following implementation of the management plans.

Figure 4–1 Simplified conceptual food web for subtidal high profile reef

Note: showing links between a variety of species across all trophic levels and indicating those species that interact with fishing (highlighted in red). See Appendix 6 of the Main Report for further details about the food web.

4.1.4 Case study - Australian sea lion at Seal Bay

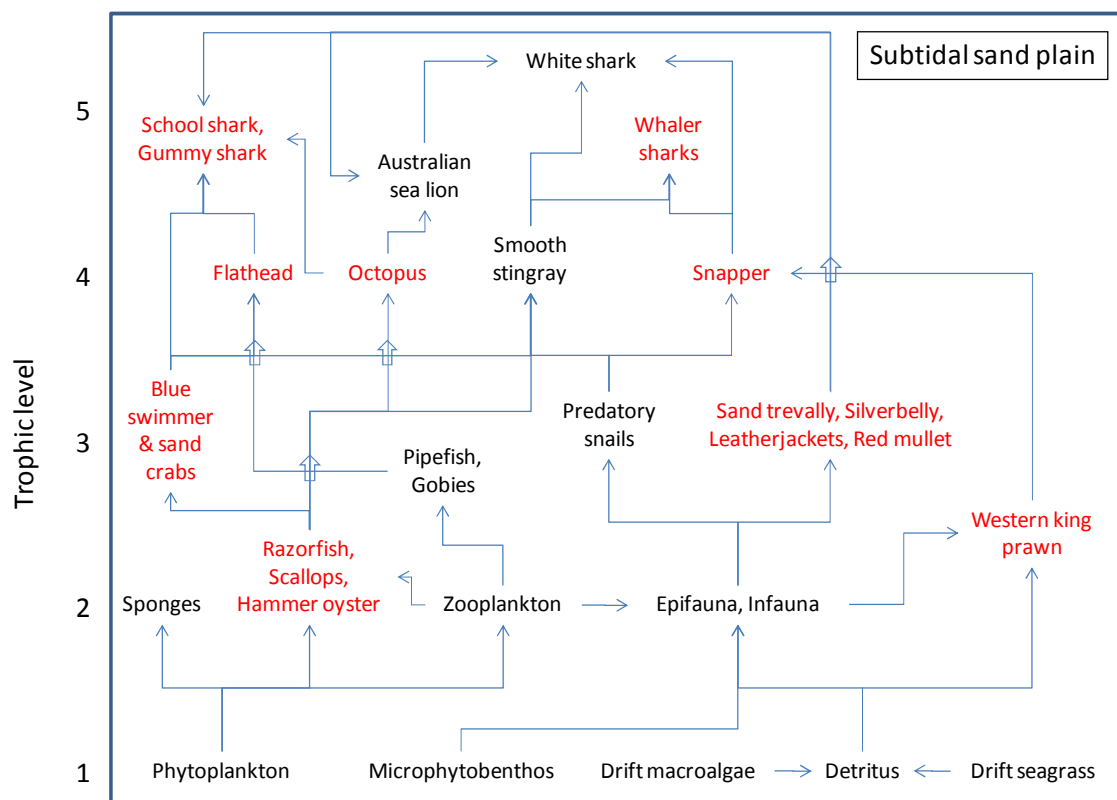

The Southern Kangaroo Island Marine Park contains the third largest breeding colony of the Australian sea lion located at Seal Bay. The proposed zoning arrangements include a large sanctuary zone SZ-1 that surrounds a restricted access zone RAZ-1 (collectively 80 km²) on the beach where the sea lions haul out. SZ-1 is then abutted on the eastern side by a habitat protection zone (HPZ-1). While SZ-1 and HPZ-1 should provide an increased level of protection for the surrounding marine habitats from future damaging activities, the question remains as to whether SZ-1 will provide an increased level of protection for the Australian sea lion at Seal Bay.

The Australian sea lion is a threatened and protected species (see Species Profile in Appendix 3 of the Main Report). The species was hunted to the brink of extinction prior to its protection in the late 20th century. Despite being protected for several decades, the species is failing to recover in many of the colonies across SA, including the colony at Seal Bay which has been in decline for many years. The lack of recovery in most colonies (note that some are recovering such as Dangerous Reef in lower Spencer Gulf) is attributed to negative interactions with the Commonwealth-managed shark gill-net fishery in areas where the fishing operations overlap with the foraging grounds of adults (Goldsworthy et al., 2010). Each of the breeding colonies appears to operate in isolation and has different foraging grounds; even for colonies that are adjacent to one another such as at the Franklin Islands on the West Coast. Australian sea lions are benthic foragers, i.e. they hunt for food on the seabed. Significantly, adults from the Seal Bay colony have foraging grounds that extend far offshore out of the park

boundaries into Commonwealth waters. It is in these waters where negative interactions occur with shark gill-nets and this appears to be the limiting factor for the recovery of the Seal Bay colony (Goldsworthy et al., 2010). There are currently new management arrangements in place with the shark fishery (including further spatial closures) that are intended to mitigate bycatch mortality but the long-term outcomes of those arrangements remain to be seen. So it is possible that the colony will continue to decline.

Regardless of the outcomes of other threat mitigation management measures, it is possible that SZ-1 will have some benefit for the Seal Bay colony. Juvenile sea lions forage much closer to shore than the adults and tracking studies show that their foraging range overlaps with SZ-1 (see Goldsworthy et al., 2010). Commercial fishing occurs inside SZ-1 and it is possible that the cessation of fishing will see an increase inside SZ-1 of benthic fishes, crustaceans and cephalopods (see Section 4.1.2.2) which are all prey for the Australian sea lion (see Figure 4–1 and Figure 4–2). Thus the proposed zoning within the Southern Kangaroo Island Marine Park has the potential to positively impact the threatened Australian sea lion colony at Seal Bay. However, unless the offshore bycatch issue is resolved it is difficult to envisage how the positive effect of the proposed zoning alone can ensure the long-term survival of the Seal Bay colony.

Figure 4–2 Simplified conceptual food web for subtidal sand plain

Note: showing links between a variety of species across all trophic levels and indicating those species that interact with fishing (highlighted in red). See Appendix 6 of the Main Report for further details about the food web.

4.2 Economic

4.2.1 Commercial Fishing

The analysis of the impact of displaced catch and/or effort on commercial fishing is based on:

- Estimates of displaced catch and/or effort provided by the South Australian Research and Development Institute (Ward and Burch 2012).
- PIRSA Fisheries and Aquaculture policy position on redistribution of displaced commercial fishing, which states that the displaced catch for sardines can be redistributed, for prawns can be redistributed up to 2 per cent of total fishery catch, and for other fisheries cannot be redistributed (PIRSA 2011). For fisheries where displaced catch cannot be redistributed it is assumed that the displaced effort will be removed from the fishery.

For some fisheries, the relevant fishing industry association has undertaken their own assessment of displaced catch/effort. The methods and data used to make these industry assessments will be reviewed by SARDI (DEWNR pers. comm., 6 July 2012). Analysis of the impact of displaced catch/effort on commercial fishing based on these industry estimates has been included in the following sections.

4.2.1.1 Summary

The estimated economic impacts on commercial fisheries, based on SARDI's average annual displaced catches and corresponding average annual prices, are relatively small for the Southern Kangaroo Island Marine Park (see Table 4-3). However, the estimates of historical catches in sanctuary zones for rock lobster have a high level of uncertainty because of the limited spatially-resolved data available for the fishery (Ward and Burch 2012). According to industry-derived estimates of displaced catch (which have yet to be reviewed by SARDI), the aggregate regional impacts could be slightly lower at less than 1 fte job and \$0.08m in GRP.

The State Government has committed to buy out licences and quota entitlements of displaced effort and catch although details of the buyout are yet to be finalised. Compensation payments have the potential to offset the negative impact of the displaced catch reported in Table 4-3. However, if compensation is limited to the buyout of displaced fishing entitlements, the negative impacts on the local economy are unlikely to be fully offset:

- There would be no requirement for the recipients of the buyout to spend or invest the funds in the region.
- Even if all the funds were invested in full in the region it is unlikely the investment would generate economic activity and wealth equivalent to that generated by the displaced fishing activity. This is because fishers have the opportunity to sell their licences at any time (they are fully transferable) but choose not to. If there were alternative investment opportunities locally that fishers had the skill and risk bearing capacity to undertake, then it is reasonable to assume that they would already be doing it.

For entitlement holders there are potentially direct financial losses suffered as a direct consequence of the cancellation of their entitlement. These could take the form of:

- a pecuniary loss such as removal and re-establishment costs or legal costs in acquiring a replacement licence/entitlements
- a capital loss of business operation - the loss of a partial entitlement or the location of sanctuary zones may negatively impact the efficiency of business operations, which might in turn impact on the market value of plant and equipment, as well as the market value of remaining fishing entitlements held by the licence holder.

4.2.1.2 Sardines

SARDI estimates of historical catch in draft sanctuary zones indicate that there would be nil catch displaced from this marine park.

4.2.1.3 Abalone

SARDI estimates indicate that historically there has been an average annual catch of 50 kg of greenlip abalone in the draft sanctuary zones in this marine park. This represents 0.03 per cent of the greenlip abalone Central Zone catch. Likewise, SARDI estimates indicate that historically there has been an average annual catch of 124 kg of blacklip abalone in the draft sanctuary zones in this marine park. This represents 0.35 per cent of the blacklip abalone Central Zone catch. The value of this sanctuary zone catch is approximately \$8,000. The combined sanctuary zone catch of both greenlip and blacklip abalone represents 0.37 per cent of the average annual catch in the Kangaroo Island region.

It is worth noting that the SARDI estimates of historical abalone catches from the sanctuary zones have a level of uncertainty because of the limited spatially-resolved data available for the fishery (Ward and Burch 2012). According to the Abalone Industry Association of South Australia the SARDI estimates are slightly below estimates prepared by licence holders⁷. The combined sanctuary zone catch of greenlip and blacklip abalone was estimated to be 950 kg which represents 0.5 per cent of the average annual catch in the Kangaroo Island region. The value of this sanctuary zone catch is approximately \$46,000. These estimates of catch are yet to be reviewed by SARDI.

4.2.1.4 Rock Lobster

SARDI estimates indicate that historically there has been an average annual catch of 2,030 kg of rock lobster in the draft sanctuary zones in this marine park. This represents 0.29 per cent of the Northern Zone Rock Lobster Fishery average annual catch or 1.28 per cent of the average annual catch in the Kangaroo Island region.

The value of output lost directly in the region by Northern Zone Rock Lobster fishing enterprises was estimated to be \$0.10m and a further \$0.02m was estimated to be lost to associated downstream activities (processing, transport and retail/food services). Flow-on output lost to other sectors of the regional economy was estimated to be \$0.06m. The total loss in output in the region (direct plus indirect) was estimated to be

⁷ The Abalone Industry Association of South Australia estimates were based on industry knowledge and experience and average catch data reported from every map code in the Western Zone Abalone Fishery over a 20 year period from January 1991 to December 2010.

\$0.18m (Table 4-3). Because the reduced access to the fishery will be permanent, the impacts reported in Table 4-3 are an estimate of the on-going, annual impact.

The loss in direct employment in the Northern Zone Rock Lobster fishery in the region was estimated to be less than 1 fte job, while downstream activities were estimated to lose less than 1 fte job. Flow-on business activity was estimated to lose less than 1 fte job, while the total loss in employment is to be approximately 1 fte job.

Contribution to GRP is measured as value of output less the cost of goods and services (including imports) used in producing the output. The loss in total Northern Zone Rock Lobster fishing industry related contribution to GRP in the region is \$0.14m, \$0.10m lost by fishing directly, \$0.01m in downstream activities and \$0.03m lost in other sectors of the regional economy.

Source: EconSearch analysis

The economic impact on rock lobster fishers may be higher than the proportion of the catch that will be lost because the small, red lobsters typically taken in State waters (where sanctuary zones are located) are more valuable (reportedly an extra \$10 per kg) than the larger, paler lobsters typically taken in Commonwealth waters (PIRSA, pers. comm. 29 September 2011). With the total allowable commercial catch at a historically low level, most licence holders in the fishery have targeted these high value rock lobsters to maximise the value of their catch. For this reason, if average trip length increases, costs will rise which is likely to lead to a reduction in profits, which will further diminish the value for licences, pots and quota.

Fishers usually fish “stop-over” areas (areas where pots are set on patchy reef en route to more distant fishing grounds) when fishers go on their usual 5-7 day trips (PIRSA, pers. comm. 29 September 2011). Sanctuary zones located over these fishing routes, even if not located in the most productive fishery areas, may disrupt this pattern leading to less efficient fishing patterns, which would mean greater cost per trip. The designation of sanctuary zones in State waters has the potential to transfer fishing activity into deeper, offshore Commonwealth waters. If this occurs, it will add

significantly to production costs because of increased travel. The potential cumulative impact of the proposed extension to and revised zoning of the Commonwealth Great Australian Marine Park and the proposed Western Eyre Commonwealth Marine Reserve may place further pressure on fishing business viability.

Since there has already been substantial consolidation occurring in the fishery, with the total allowable commercial catch presently at 310 tonnes, the introduction of sanctuary zones is likely to add further strain to many of the remaining licence holders.

The estimates of reduced regional economic activity, while relatively small, are likely to persist into the future, i.e. over next 20 years, as the reduced access to the resource will be permanent given the current fully exploited status of the fishery.

As with abalone catch, estimates of historical rock lobster catches in the sanctuary zones have a high level of uncertainty because of the limited spatially-resolved data available for the fishery (Ward and Burch 2012). For instance, it is assumed that catch of the fishery was evenly distributed in state waters within each marine fished area. According to Ward and Burch (2012) this assumption introduces considerable potential for bias in the estimates of historical catches for individual sanctuary zones because it may lead to:

- over-estimation of the historical catch from a sanctuary zone if the fishing hotspots (e.g. rock lobster, abalone or marine scalefish) in state waters of that marine fished area were outside the sanctuary zone; and
- under-estimation of the historical catch from that sanctuary zone if the fishing hotspots (e.g.. rock lobster, abalone or marine scalefish) were in a sanctuary zone.

According to Knuckey (2012) the industry estimate of displaced catch is lower than the estimate prepared by SARDI. The sanctuary zone catch of rock lobster was estimated by Knuckey (2012) to be 1,170kg.

Based on this estimate (which is yet to be reviewed by SARDI), the value of output lost directly in the region by Rock Lobster fishing enterprises was calculated to be \$0.06m and a further \$0.01m was estimated to be lost to associated downstream activities. Flow-on output lost to other sectors of the regional economy was estimated to be \$0.03m. The total loss in output in the region (direct plus indirect) was estimated to be \$0.11m (Table 4-4).

The loss in direct employment in the Northern Zone Rock Lobster fishery in the region was estimated to be less than 1 fte job, while downstream activities were estimated to also lose less than 1 fte job. Flow-on business activity was estimated to lose less than 1 fte job, while the total loss in employment is less than 1 fte job.

The loss in total Rock Lobster fishing industry related contribution to GRP in the region is \$0.08m, \$0.06m lost by fishing directly and \$0.02m lost in other sectors of the regional economy.

4.2.1.5 Marine Scalefish

SARDI estimates of historic effort in draft sanctuary zones for the Marine Scalefish Fishery are provided in Table 4-5 and historic catch for the main fishery species in Table 4-6. The total sanctuary zone catch of marine scalefish represents 0.01 per cent of the average annual catch in the Kangaroo Island region.

The value of the sanctuary zone catch is estimated to be less than \$1,000.

Table 4-5 Average annual Marine Scalefish effort in draft sanctuary zones by sector

Sector	Sanctuary zone effort (person days)	% effort of sector
Handline	1	<0.01
Haulnet	Nil	Nil
Longline	1	0.01
Other	3	0.01

Notes: Handline, longline and other gear sectors based on 10 years of data, haulnet based on 3 years of data

4.2.1.6 Charter Boat

SARDI estimates indicate that historically there has been an average annual charter boat effort of 1 person day in the draft sanctuary zones in this marine park. The value of this sanctuary zone effort is less than \$1,000.

4.2.1.7 Sharks⁸

The Gillnet, Hook and Trap sector of the Commonwealth Southern and Eastern Scalefish and Shark Fishery operates in the Southern Kangaroo Island Marine Park. The fishery occurs predominantly in Commonwealth waters and therefore is managed by Australian Fisheries Management Authority under an Offshore Constitutional Settlement. Target species are school and gummy sharks. A preliminary estimate of an average catch of 61 kg per year will be displaced from the line fishing sector by sanctuary zones in this park. This sanctuary zone catch represents 0.39 per cent of the fishery catch in State waters, and 0.02 per cent of the fishery catch off SA (State and Commonwealth waters).

4.2.2 Aquaculture

There are currently no aquaculture operations in this marine park and any future development will need to be consistent with policy commitments, marine park and aquaculture related legislation (PIRSA, pers. comm., 27 June 2012).

4.2.3 Property Prices

Given that the overall impact on the region is not expected to be large in absolute terms, the impact on property values is, similarly, not expected to be significant. States of Australia have introduced marine parks with sanctuary zones in the last decade without any known long-term effects on property values. External factors notwithstanding, the trend in Kangaroo Island residential property prices illustrated in the regional socio-economic profile is unlikely to be affected by the proposed marine park zoning.

⁸ Australian Fisheries Management Authority data shows no reported catch by the Southern Bluefin Tuna fishery or Great Australian Bight trawl fishery in South Australian state waters for the period 2001-2010. No impact from the draft zoning is anticipated on these fisheries.

4.2.4 Tourism

The following assessment is based on discussions with the South Australian Tourism Commission, local councils and local offices of Regional Development Australia.

As discussed in section 4.3.5.2, the actual placement of sanctuary zones is unlikely to place real restriction on recreational fishing. However the perception that recreational fishing opportunities will be restricted by implementing 'no take' zones is real (for example, the charter boat industry has identified that they have benefited from an increased number of interstate clients in recent years who come to South Australia to fish because SA waters do not have marine park 'no take' zones). So there is potential for a downturn in fishing-based tourism in the short-term until visitors are informed and convinced of the actual situation on the water.

Ecotourism is an industry in its infancy and is expected to grow, however is unlikely to grow into a large industry because of the natural limitations of rough seas, cold water and sharks. Several organisations raised the issue of operator permits being a key factor in the ability of the industry to grow. In the past, one-year, renewable permits (issued under the *National Parks and Wildlife Act 1972*) were available which is viewed as a barrier to investment in this area. The permitting policy is being changed, with far greater flexibility on the length of time permits can be held, ranging from two-month permits up to 10-year permits⁹ which is seen as likely to boost business investment. There will be situations where eco-tourism operations will occur within sanctuary zones which may benefit from zoning by, for example, not having to share the space with fishers. In the long-term managed marine parks will provide certainty that the marine environment within them is being protected and this is likely to support the ecotourism industry, provided the necessary investment in tourism infrastructure and support services is undertaken.

Other, non-extractive tourism, such as diving, is likely to benefit from the implementation of sanctuary zones however more detailed assessment has not been possible.

4.2.5 Port, Harbours and Shipping Operations

There are no ports or harbours in this marine park. No significant impacts on shipping activities arising from the zoning in this park are expected, which is consistent with Government policy commitments.

4.2.6 Mining

No mineral, petroleum or geothermal licences or leases are currently located within this marine park.

4.2.7 Coastal Development

There are no significant projects or infrastructure in or known to be planned for this marine park.

⁹ See DEWNR's current *Commercial Tour Operators' Licensing and Permitting Policy* at http://www.environment.sa.gov.au/parks/Get_Involved/Commercial_Tour_Operators

4.3 Social

4.3.1 Summary of method

The social impact assessment drew on multiple sources of information – a review of research relating to established marine parks elsewhere in Australia and overseas; an analysis of market research undertaken in relation to South Australian marine parks; an analysis of MPLAG minutes and of media reports relating to each park, a review of the social values statement prepared for the park, and analysis of the economic impacts identified.

Finally a Marine Parks Social Impact Assessment Tool (MPSIAT) was designed which sought feedback from MPLAG members on different types of social impact expected to flow from preliminary zoning options considered prior to the draft zones presented within the draft management plans.

The findings from these different sources were analysed separately and in combination to determine overall expected social impacts.

Although this report presents impact analysis relating to the draft zones, the MPSIAT findings are included because they represent part of the community consultation process and the draft zones reflect the SA government's response to the findings of that process.

Nine of 14 respondents ¹⁰ (64 per cent) of the Kangaroo Island MPLAG responded to the online social impact assessment for the Southern Kangaroo Island Marine Park. The findings from these different sources were analysed separately and in combination to determine overall expected social impacts.

4.3.2 Expected social impacts – at a glance

The overall social impacts of the Southern Kangaroo Island Marine Park on communities living on Kangaroo Island are expected to be low given the magnitude of the economic impacts that have been projected. Commercial fishing is an important source of employment and is estimated to contribute 74 jobs to employment in the region, compared with tourism which contributes 960 jobs. Economic impact assessment identifies loss of one commercial fishing-related job in a region of low unemployment and low levels of measured relative disadvantage. The State Government has committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above. The impact on recreational fishing is considered to be minimal with adjustments in zoning designed to minimise any potential negative impacts. Consequently, any impact on local community identity as a fishing centre and on fishing as a way of life is also likely to be low.

Experience elsewhere in Australia and internationally (Ledee *et al* 2011, Cocklin *et al* 1998), suggests that a range of benefits will become evident over time. These include increased opportunities for education about marine life and conservation, and increased tourism and ecotourism opportunities. Experience elsewhere indicates that these benefits usually take approximately five years to be evident, and that in the

¹⁰ Any MPLAG members who indicated they did not wish to participate in the social impact assessment a priori were not approached.

earliest stages of marine protected areas being developed, communities are more likely to identify possible negative impacts than potential benefits. It takes time to observe how the park's ecological and economic impacts evolve, with social impacts (positive or negative) flowing from these.

Certainly at this stage of the South Australian marine parks' development, monitoring of media reports, feedback from MPLAGs and analysis of their meeting discussions, illustrates the trend to expect the changes associated with their development to be problematic. One very important factor that affects community attitudes is how informed they are, and feedback from market research and MPLAGs, as well as analysis of media reports indicates a gap in this information. In particular, increasing communities' understanding of the scientific rationale underpinning marine protected areas, and the benefits that these can bring, needs to be enhanced.

Marine parks have broad support in the South Australian community. Market research commissioned by the state government between 2006 and 2012 (McGregor Tan Research 2006, 2007, 2008 and 2009; Square Holes 2009, 2011 and 2012) found strong support for the concept of marine parks among South Australians with approximately 85 per cent in favour of them in 2012 (87 per cent support in metropolitan Adelaide and 82 per cent support in regional areas). People interviewed for this research were able to identify seven main benefits arising from marine parks:

1. preservation of the environment for future generations
2. protection and conservation of marine habitats and wildlife
3. increases in fish stocks
4. greater opportunities for scientific research and education
5. greater opportunities for nature based tourism and recreation
6. protection of cultural and heritage sites
7. greater certainty for marine industries and users.

The research found in 2011 and again in 2012 that 88 per cent believe that protection of the marine environment through managed marine parks is the responsibility of current generations for the benefit of future generations.

The market research found that loss of commercial benefits is a particular concern, particularly for those living in regional areas (33 per cent in 2012) compared with those in metropolitan Adelaide (22 per cent in 2012). Those least likely to support marine parks have been fishing groups (in 2009 55 per cent of respondents who did not support marine parks identified restricted fishing as the reason, this dropped to 39 per cent in 2012).

Between 2011 and 2012 the market research findings identify a decline in those who believe they will have limited access to marine parks and an increase in those who associate swimming, boating and snorkelling with marine parks.

4.3.3 Education and Wellbeing

MPSIAT respondents were divided in their views about whether the park would provide increased opportunities for education about marine life and for improved understanding about marine conservation issues. International research findings identify these are key outcomes and benefits of marine protected areas (Angulo-Valdes and Hatcher 2010).

Approximately half of MPSIAT respondents believed the park zoning would improve neither their quality of life nor that of the people in their community. The draft zoning proposal is the result of considerable discussion about how potential negative impacts on users of marine resources in the marine park can be minimised. For this reason it is expected that personal quality of life in general and quality of community life is unlikely to be negatively impacted by the draft zoning proposal.

4.3.4 Culture and Heritage

DEWNR undertook a process of consultation with Aboriginal stakeholders about the establishment of the marine parks. No significant negative impacts on Aboriginal communities were identified. However, it is important that further consultation be undertaken in relation to the likely impact of the draft zoning.

The Ngarrindjeri and Kurna Aboriginal people may have had traditional associations with Kangaroo Island, including the marine environment and associated marine life. Aboriginal aspirations for this area are not known by the Department of Environment and Natural Resources. There are currently no Native Title Claims or registered Indigenous Land Use Agreements included in the marine park. Kangaroo Island is believed to contain many cultural heritage sites from when the Island was connected to the main land, as well as more recently from the early 19th century when many Aboriginal women were taken to Kangaroo Island from Kurna, Ngarrindjeri and Tasmanian Aboriginal groups by sealers and whalers.

All MPSIAT respondents expected that the park zoning would be unlikely to help preserve local Australian heritage (see Appendix Table 4-3).

4.3.5 Recreation and Fishing

4.3.5.1 Recreation

A minority of MPSIAT respondents expected that the proposed zoning would encourage more recreational activity, a greater range of recreational activities and improved recreational facilities (see Appendix Table 4-4).

4.3.5.2 Recreational Fishing

The following assessment is based mainly on the SAMPIT mapping¹¹, with material from separate interviews with the South Australian Recreational Fishing Advisory Council (SARFAC) and the DEWNR project coordinators who facilitated the MPLAG process, where appropriate.

The waters in this marine park are generally exposed and with limited access points, and as a result there is less recreational fishing in this park in comparison with many of the other marine parks. In D'Estrees Bay and around Point Tinline there is some

¹¹ The South Australian Marine Parks Information Tool (SAMPIT) is a computer tool designed to gather information from community members about their favourite fishing spots and areas they believe need protection. Data is collected and reported by 'grid cell'. SAMPIT data for 1,739 people is available including 1311 recreational fishers. Quality control by the Department of Environment and Natural Resources included cross-verification of legitimate naming and activities from the data provided (DENR 2010b).

recreational fishing, however there is no sanctuary zone proposed in this area. Minimal impact on recreational fishing is expected from the draft zoning in this marine park.

4.3.5.3 Commercial Fishing

The overall social impacts of the Southern Kangaroo Island Marine Park on communities living on Kangaroo Island are expected to be low given the magnitude of the economic impacts that have been projected. Economic modelling has estimated a loss of one job from the fishing industry in the Kangaroo Island region. Commercial fishing is an important source of employment and is estimated to contribute 74 jobs to employment in the region, compared with tourism which contributes 960 jobs. The State Government has committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above. Consequently, any impact on local community identity as a fishing centre and on fishing as a way of life is also likely to be low.

The following potential social impacts have been identified for the rock lobster fishery.

Given the preference for fishing in State waters, reducing the area of State waters that can be fished is likely to result in an increase in conflict amongst commercial rock lobster fishers in these waters (PIRSA, pers. comm., 29 September 2011). It could be expected that this type of conflict would be resolved over time and not persist into the medium to long-term.

Australian researchers have identified the potential psychological impacts on fishing families arising from uncertainty about fishing business viability, reduced family income, reduced self-esteem arising from the loss of fishing occupation and the difficulty of finding alternative employment in the region (Schirmer et al. 2004: 7-8). Much depends on individual fishers' capacity to adapt which in turn has been found to depend on their financial situation, ability to work elsewhere, business skills and willingness to accept rather than resist change (Marshall and Marshall 2007). This diversity means that fishers, will vary significantly in the way marine parks affect them, and will have differing views on that impact, as is reflected in Appendix Table 4-4.

Furthermore, there is minimal research on the social impacts of marine parks on commercial fishers and their families in particular, and on communities as a whole (Voyer 2011, 2012, Beeton et al 2012, Fairweather et al 2009). The Great Barrier Reef Marine Park Authority is cited as one exception to this trend (Voyer et al 2012, Beeton et al 2012) while social impact research has also been undertaken in relation to Ningaloo Marine Park in Western Australia (Northcote & Macbeth 2008).

By contrast, economic impacts of marine parks have been significantly more researched. Australian researchers have found that most commercial fishers have adapted their fishing activity and fishing business at least moderately well in the five years following implementation of the 2004 Great Barrier Reef Marine Park rezoning, leading them to conclude that many of the impacts experienced by fishers might be short-term and decline over time as fishers adapt to the change (Ledee et al. 2011: 8). Similarly, research undertaken in New Zealand's Leigh Marine Reserve has found that almost two decades after it was established in 1975, commercial and recreational fishers reported that fishing outside the boundaries had improved over time (Cocklin et al. 1998).

4.3.6 Local Government, Population and Housing

4.3.6.1 Local Government

Through the SA Regional Organisations of Councils, facilitated by the Local Government Association SA, all local government councils which border marine parks in SA were invited to participate in a survey about potential impact of marine park zoning on council operations, council infrastructure and council revenues.

No local council responded. However, based on the response from other local councils and on the expected social and economic impacts, no impacts on local government operations, infrastructure and revenue or compliance related activities are expected as a result of the proposed draft zoning.

4.3.6.2 Population and housing

Economic modelling has estimated a loss of one job from the fishing industry in the Kangaroo Island region. Unemployment in the Kangaroo Island region is low when compared with the state average. Depending on the skills match, this suggests that alternative regional opportunities for unemployed labour may not be difficult to find. The jobs impact on the fishing industry is not expected to have significant impact on the regional population or housing.

4.3.7 Community

A majority of MPSIAT respondents expected the local community to adapt to changes brought by the zoning of the park, and to be sufficiently resilient to manage these changes (see Appendix Table 4-6).

The majority of MPSIAT respondents did not expect business opportunities to increase as a result of the proposed zoning of the park, nor did they envisage the need for training programs to assist local people to transition to new occupations that may emerge from its establishment. However, thought should be given to training programs that assist people to manage changes brought by establishing the park. It is possible that new employment opportunities will emerge, and it will be important for local people to take advantage of those, with training being potentially important to their ability to do so.

While there is little research evidence about the impacts of marine protected areas on communities as a whole, there are several studies in Australia and overseas that have identified a range of positive impacts, including enhanced tourism opportunities with flow on benefits to other sectors in the local economy (Ward et al. 2001, Cocklin et al. 1998). However, these and other benefits are not apparent in the early implementation stages and where positive impacts are reported these tend to be evident after about five years, becoming increasingly evident over the longer term (Cocklin et al. 1998, reporting on New Zealand marine parks established from 1975 onwards).

Given the limited impacts expected on commercial sectors and on recreational fishing in this region from the proposed zoning, it is expected that the proposed management plan will not present significant adjustment pressures to the community, although some adjustment is expected from the commercial fishing sector.

4.3.8 SEIFA based analysis of impacts

Possible job losses in the Kangaroo Island Impact Region are expected to be low (1 fte, -0.04 per cent impact) in the area associated with the Southern Kangaroo Island Marine Park and low to moderate associated with the Western Kangaroo Island Marine Park with approximately 12 fte jobs expected to be lost (-0.45 per cent impact on the region).

In an area of low unemployment (3.9 per cent) and low relative disadvantage (SEIFA and leading indicators), any job losses are likely to have low to moderate social impact associated with the Western Kangaroo Island Marine Park and low social impact associated with the Southern Kangaroo Island Marine Park.

Table 4-7 Social impact for Kangaroo Island Impact Region

Impact region	Kangaroo Island	
Marine Park # and Name	16: Western Kangaroo Island	17: Southern Kangaroo Island
Jobs impact (FTE)	-12	-1
% impact on region	-0.45%	-0.04%
Regional unemployment	Low (3.9%)	
SEIFA relative disadvantage (SLA)	Low	
Index of Economic Resources (SLA)	Low	
Index of Education & Occupation (SLA)	Low	
Proportion of single parent families ^{b,c}	Low	
Proportion with education lower than year 12 ^{b,c}	Low	
Proportion of population with Indigenous background ^{b,c}	Low	
% fair or poor health (self report)	Low	
Expected social impact	Low-moderate	Low

Note 1 SLA associated with Impact region

Note rounding errors do occur.

^d Compiled by PHIDU using data estimated from the *2007-08 National Health Survey* (NHS), ABS (unpublished); and ABS Estimated Resident Population, average of 30 June 2007 and 2008

Note, an Impact Region or SLA is considered high if it has at least one SLA in the highest decile in SA (a moderate value falls in the second highest decile).

4.3.9 Next Steps in Social Impact Assessment

4.3.9.1 Short term objectives

Social impact research constantly identifies insufficient information as a cause of concern for communities affected by the establishment of marine parks, and notes how important such information can be for effective participation in the process of designing and implementing these parks. This includes better communication of the underpinning

science of marine protected areas and how it has influenced their design and the setting of zones (Fairweather et al. 2009). The more recent review of marine parks in NSW (Beeton et al 2012) also found that insufficient community informing, and an associated lack of resourcing for this purpose, has resulted in marine parks-related decision making and the benefits of marine parks being insufficiently understood the general public. There is also research evidence of the importance of informed participation in marine park decision making and management, and in the enforcement of compliance (McPhee 2011, Cocklin et al. 1998).

In this context it is important to note that a range of information provision and consultation strategies were implemented by DEWNR to inform the marine parks decision making process. The SAMPIT and MPLAG processes provided an important opportunity for key stakeholders to contribute to the design of the marine park. This impact assessment report is the foundation for a further community consultation process. Further details about the information provision and consultation processes undertaken by DEWNR are detailed in section 1.1.

A clear message from the market research, media reporting and feedback from MPLAGs is that the scientific arguments in favour of establishing marine parks, including the Southern Kangaroo Island Marine Park, need to be better understood by the wider community. This is one of the functions of this impact statement which is designed to inform judgements on the impact of the draft zoning proposal. MPSIAT feedback indicates that those members who do not understand the scientific arguments, also tend to disagree that the park's boundaries and proposed zoning are based on sound science.

In their evaluation of New South Wales marine parks, Fairweather et al. (2009: 26) recommended to the Marine Parks Advisory Council of NSW that they be '*... more assertive about the science and other research behind the NSW Marine Park system ...*' partly to refute misinformation being spread by opponents of the parks but also to ensure levels of understanding were increased. Acknowledging community concerns about possible negative impacts on their lives, the researchers identified the importance of ongoing socio-economic impact assessment as one means of improving understanding of the value of marine protected areas to Indigenous, recreational and commercial users of marine parks, mainly because it can capture the economic and social benefits that develop over time (Fairweather et al. 2009: 15-17).

MPSIAT respondents expressed the need for more information about this marine park and how it will operate. Reliance on public forums, open days and processes that involve giving information rather than listening to local voices, have been criticised in local media.

It is important to note that a range of information provision and consultation strategies were implemented by DEWNR to inform the marine parks decision making process. The SAMPIT and MPLAG processes provided an important opportunity for key stakeholders to contribute to the design of the marine park. This impact assessment report is the foundation for a further community consultation process. Further details about the information provision and consultation processes undertaken by DEWNR are detailed in section 1.1.

4.3.9.2 Ongoing impact assessment

Social impact assessment that is repeated over time, provides a mechanism for informing as well as engaging communities, involving them in decision making, and

identifying and assisting with managing intended and unintended social consequences (Vanclay 2005). However coastal zone management is often criticised for a failure to facilitate effective community engagement in what has been termed a 'democratic deficit' (Vanclay 2012).

Perceptions of social impacts of change reflect knowledge, experience, values and roles. They provide a guide to possible but not certain impacts. To provide greater certainty about likely impacts we need to subject marine park zones to economic and environmental impact identification processes like those adopted in this impact assessment statement, repeating them over time to measure changes. The results of this process are necessary to inform judgments about the magnitude of social impacts.

The opportunity now exists for key stakeholders to provide perspectives on social impacts in the light of new knowledge about industry, employment, species and habitat impacts provided in this impact statement.

Appendix 1 Socio-economic Profile – Kangaroo Island

This socio-economic profile provides a statistical summary of key economic and social information for the Kangaroo Island region and, where possible, South Australia (SA). The profile brings together a wide range of existing Australian Bureau of Statistics (ABS) data and some non-ABS data. It has been designed, at a broad level, to aid understanding of the economic and social structure of the region, to indicate how the Kangaroo Island region contributes to the State economy and to monitor trends in economic growth or decline.

Kangaroo Island is located south-west of Adelaide (Figure 1). The one statistical local area (SLA) that comprises the region is Kangaroo Island (DC). The Kangaroo Island regional economy is relevant to the Western Kangaroo Island (MP16), and Southern Kangaroo Island (MP17) marine parks. Table 1 presents a summary of the key economic and social information detailed further in the report.

Appendix Table 1-1 Summary of key economic and social indicators for Kangaroo Island

Indicator	Kangaroo Island	SA	Kangaroo Island as a proportion of SA
Population, 2010/11 (no.)	4,666	1,656,299	0.3%
Birth Rate, 2009/10 (births/1000 residents)	11.8	12.2	-
Death Rate, 2009/10 (deaths/1000 residents)	6.9	7.9	-
Age Distribution, 2009/10:			
Proportion of Population aged 0-14	19%	18%	-
Proportion of Population aged 15-64	65%	67%	-
Proportion of Population aged 65+	16%	16%	-
Dependency Rate, 2009/10:			
Child	29%	27%	-
Aged	24%	23%	-
Total	54%	50%	-
Population Projection, Increase from 2006 to 2026	20%	23%	-
Employment, June qtr 2011:			
Labour Force (no.)	2,678	867,500	0.3%
Unemployed (no.)	105	45,300	0.2%
Unemployment Rate	4%	5%	-
Participation Rate, 2009/10	69%	63%	-
Businesses, June 2009 (no.)	687	141,625	0.5%
School Enrollments, 2011	620	247,356	0.3%
Tertiary Enrollments, 2011	411	208,706	0.2%
Non-school Qualifications, 2006	838	595,379	0.1%
Mean Taxable Income, 2009/10 (\$)	43,766	54,349	-
Proportion of Taxable Individuals, 2009/10	64%	74%	-
Value per Building Approval, 2010/11 (\$)	255,153	236,269	-
Median Dwelling Price, 2010/11 (\$)	235,000	357,500	-
Commercial Fishing, Ave/yr 2000/01 to 2009/10:			
Catch (t)	1,407	47,581	3.0%
Value of Catch (\$m)	10	202	5.0%
Charter Boats, Ave/yr 2007/08 to 2009/10 (no. of fish)	20,333	146,341	13.9%
Recreational Fishing, 2007/08:			
Fishers (no.)	11,190	236,463	4.7%
Days Fished (no.)	32,743	1,054,200	3.1%
Gross Regional Product, 2009/10 (\$m)	161	80,356	0.2%
Employment, 2009/10 (fte)	2,262	774,953	0.3%
Tourism, 2009/10 (\$m)	121	4,524	2.7%
Other Regional Exports, 2009/10 (\$m)	93	26,757	0.3%
Regional Imports, 2009/10 (\$m)	235	40,573	0.6%

Demographic indicators

- The estimated resident population of Kangaroo Island increased by 10 per cent (approximately 400 persons) between 2000/01 and 2010/11 and was almost 4,700 persons in 2010/11. Over the same period SA experienced similar population growth of almost 10 per cent (Chart 1).
- Compared with the age distribution of the state as a whole, Kangaroo Island has a slightly higher than average concentration of younger people (aged 0 to 14 years), a smaller than average share of persons aged 15 to 64 years and a similar share of people aged 65 and over (Table 2).

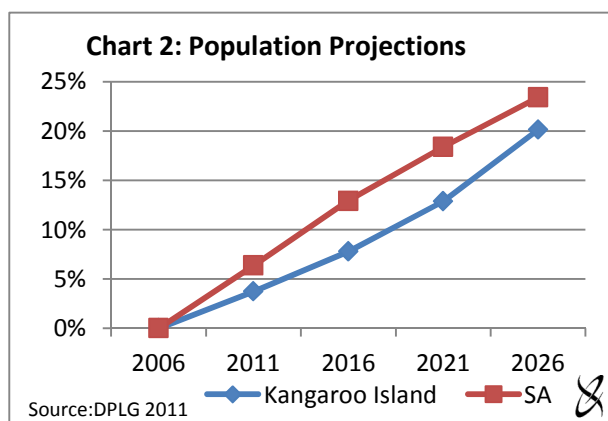

Appendix Table 1-2 Age distribution of the population for Kangaroo Island and SA, 2000/01 to 2009/10

Age	Year									
	2000/01	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07	2007/08	2008/09	2009/10

Source: ABS 2010a and ABS 2011c

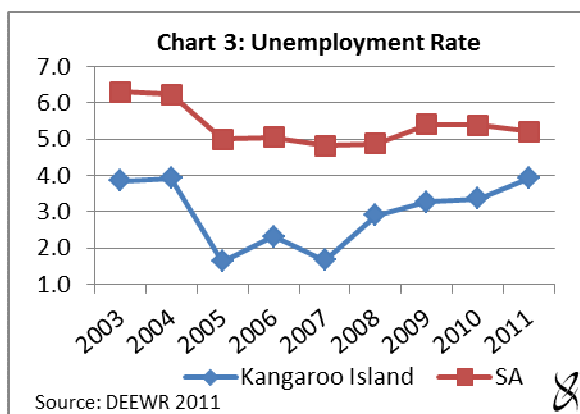

- The total dependency rate for Kangaroo Island was 54 per cent in 2009/10. This implies that for any dependent person (persons aged 0 to 14 and over 65) there approximately 2 persons providing support. At the state level the dependency rate was 50 per cent in 2009/10 (ABS 2010a and ABS 2011c).

- According to the Department of Planning and Local Government (DPLG) population projections¹², the total population on Kangaroo Island is likely to increase by around 20 per cent by 2026 and the SA population is expected to increase by a similar amount, approximately 23 per cent (Chart 2).
- Population projections for Kangaroo Island for persons aged 0 to 14 years indicate that there will be an increase (12 per cent from 2006) in this age category. There is projected to be no change in the working age population (15 to 64 years) (from 2006). The population projections for persons 65 or older indicate that a significant increase of around 127 per cent in this age group is expected over the 20 years to 2026 (DPLG 2011).

Labour force indicators

- In the June quarter of 2011, the labour force on Kangaroo Island was almost 2,700 (by place of residence), an increase of 20 per cent from the March quarter of 2003. By comparison, the labour force for SA increased by 14 per cent over the same period (DEEWR 2011).
- The number of unemployed persons on Kangaroo Island was 97 in March 2003 and 105 in June 2011, an increase of approximately 8 per cent over the period. By comparison, the number of unemployed persons in SA decreased by approximately 11 per cent over the same period (DEEWR 2011).
- The unemployment rate on Kangaroo Island was almost 3.9 per cent in the June quarter of 2011. The unemployment rate for SA for the same quarter was higher at 5.2 per cent (Chart 3).
- The labour force participation rate was consistently higher for Kangaroo Island than for the whole of SA, over the years 2002/03 to 2009/10, reflecting the lower proportion of elderly people living on Kangaroo Island. In 2009/10 the labour force participation rate on Kangaroo Island was around 69 per cent compared to 63 per cent for SA as a whole (DEEWR 2011, ABS 2010a and ABS 2011c).

¹² Population projections are not forecasts, they are based on ABS 2006 *Census of Population and Housing* resident population estimates and trends in mortality, fertility and overseas and interstate migration for South Australia. A range of estimates are published, based on the assumed level of migration. The 'medium level of migration' series has been utilised in this analysis. The method used to compile the projections was not influenced by local factors such as land availability or zoning, that is, it was assumed that these factors would not be limiting on population growth.

Business Count

- The total number of businesses operating at the end of June 2009 on Kangaroo Island was 687, 0.5 per cent of the total businesses operating in SA (almost 142,000) (ABS 2011d).
- Of the 687 businesses operating on Kangaroo Island, over 50 per cent were classified in the agriculture, forestry and fishing sector and 10 per cent were in the construction sector (ABS 2011d).
- Approximately 60 of the businesses operating on Kangaroo Island did not employ anyone and 20 per cent employed between 1 and 4 people (ABS 2011d).

Education and training

- The total number of residents on Kangaroo Island with a non-school qualification increased slightly over the 5 years to 2006. In 2006, approximately 24 per cent of all persons aged 15 or over held some form of non-school qualification, compared with 21 per cent in 2001 (ABS 2007 and 2010a).
- The level of qualification was generally lower for Kangaroo Island than for SA, with the proportion of persons with a bachelor degree or higher being significantly lower (Table 3).

Appendix Table 1-3 Highest level of qualifications for persons aged 15 and over on Kangaroo Island and SA, 2001 and 2006 ^a

Qualification	Kangaroo Island

^a 2011 Census data on qualifications not available until the second release in October 2012.

Source: 2006 Census of Population and Housing (ABS 2007).

- The total number of Kangaroo Island students enrolled in primary school decreased by 12 per cent between 2001 and 2011. The decline was comprised of a 15 per cent decrease in government school enrolments and a small increase in non-government school enrolments (Table 4).
- The total number of Kangaroo Island students enrolled in secondary school declined by 31 per cent between 2001 and 2011. The decline was comprised of a decrease in government school enrolments and (Table 4).
- Between 2001 and 2011 the total number of Kangaroo Island residents enrolled in a higher education institute increased by 45 per cent. This is a greater increase than for SA as a whole (38 per cent increase) (ABS 2012b).

Household income

- The mean individual taxable income on Kangaroo Island was consistently lower than the state average between 2000/01 and 2009/10 (Chart 4).
- Over the period 2000/01 to 2009/10, the mean taxable income (in nominal terms) increased by 48 per cent on Kangaroo Island and 54 per cent in SA as a whole (Chart 4).
- In 2009/10 mean taxable income was almost \$43,800 on Kangaroo Island and around \$54,350 in SA (Chart 4).

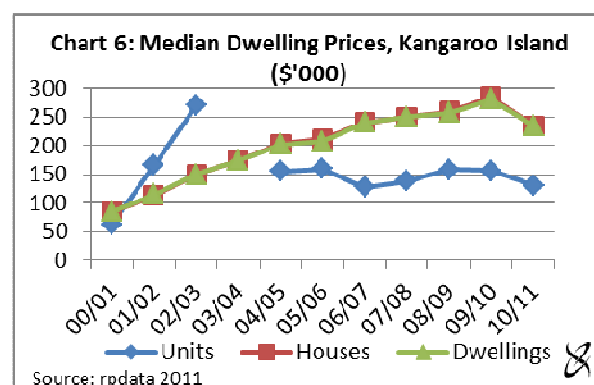

Building approvals

- The number of building approvals on Kangaroo Island decreased by 55 per cent between 2001/02 to 2010/11. However, the total value of approvals increased over the same period from \$10.7m in 2001/02 to \$11.5m in 2010/11, an increase of 7 per cent (ABS 2011e).
- For SA the total number of approvals was also 3 per cent greater in 2010/11 than in 2001/02, while the total value was 90 per cent higher (ABS 2011e).
- Despite fluctuations in between years, the average value per approval on Kangaroo Island increased by approximately 137 per cent, from \$107,000 in 2001/02 to \$255,000 in 2010/11 (Chart 5).
- For SA, the value per approval increased from \$128,000 in 2001/02 to \$236,000 in 2010/11, an increase of 85 per cent (Chart 5).

Property Values

- Between 2000/01 and 2010/11 the median unit price on Kangaroo Island more than doubled, from \$62,000 in 2000/01 to \$131,000 in 2010/11 (Chart 6). The median unit price in SA as a whole increased by 215 per cent over the 10 year period, from almost \$102,000 to \$320,000 (rpdata 2011).
- The median house price on Kangaroo Island increased by 176 per cent between 2000/01 and 2010/11, from almost \$85,000 to \$235,000 (Chart 6). In comparison, house prices in SA as a whole increased at a lower rate, from \$126,000 to \$370,000 over the same period, a 194 per cent increase (rpdata 2011).
- Overall median dwelling (units and houses) prices increased by 176 per cent on Kangaroo Island (\$235,000 in 2010/11) and 197 per cent in SA as a whole (\$357,500 in 2010/11) over the period 2000/01 to 2010/11 (rpdata 2011).

Commercial fishing

- The average annual catch of abalone in the Kangaroo Island region over the past 10 years, 2000/01 to 2009/10, was almost 47 tonnes. The value of this average annual catch was around \$1.9 million (SARDI by special request).
- In the Kangaroo Island region over the past 10 years, 2000/01 to 2009/10, the average annual catch of sardines was approximately 1,000 tonnes with a beach value of almost \$700,000 (SARDI).
- Annual catch of rock lobster in the Kangaroo Island region averaged around 115 tonnes with a beach value of approximately \$3.9 million over the period 2000/01 to 2009/10 (SARDI).
- Annual average catch of Marine Scalefish species including miscellaneous species in the Kangaroo Island region over the period 2000/01 to 2009/10 was approximately 156 tonnes with a beach value of around \$845,000 (SARDI).
- Between 2007/08 and 2009/10 the charter boat operators in the Kangaroo Island region caught on average approximately 20,000 fish per annum (SARDI). This compares to an annual average catch for SA of 146,000 fish over the same period (PIRSA 2010).

Recreational Fishing

- Between 2000/01 and 2007/08 the total number of SA resident recreational fishers (those aged 5 and older) on Kangaroo Island (regions 20 and 21 in the report South Australian Recreational Fishing Survey 2007/08 (Jones 2009)) increased by 2 per cent, from around 7,700 in 2000/01 to almost 8,400 fishers in 2007/08.
- At the state level the number of SA resident recreational fishers decreased from an estimated 317,200 in 2000/01 to around 236,500 fishers in 2007/08 (a 25 per cent decrease) (Jones 2009).
- Despite the number of SA resident recreational fishers on Kangaroo Island increasing between 2000/01 and 2007/08, the number of days fished by SA resident recreational fishers fell. On Kangaroo Island the number of days fished by SA resident recreational fishers decreased from approximately 38,000 days in 2000/01 to around 33,000 days in 2007/08 (a 15 per cent decline) (Jones 2009).
- For SA as a whole, the total number of days fished by SA resident recreational fishers almost halved over the seven years, from 1.83 million days in 2000/01 to 1.05 million in 2007/08 (Jones 2009).

Economic Contribution of Tourism to the Region

In aggregate, it was estimated that expenditure by tourists in the Kangaroo Island region in 2009/10 (\$121m (TRA 2011 and EconSearch analysis)) generated the following level of regional economic and demographic activity.

- Approximately \$62 million in GRP which represents 38 per cent of the regional total (\$161 million).
- Approximately 1,100 full-time and part-time jobs which represents 46 per cent of the regional total (2,400 total jobs).
- Almost 1,000 fte jobs which represents 43 per cent of the regional total (2,300 fte).

Regional Economic Structure

- At the time of the 2006 population census it was estimated that approximately 90 per cent of the jobs in the region were held by local residents and the balance were held predominantly by residents of adjacent regions (i.e. travelled to work from the surrounding SLAs). Approximately 97 per cent of employed residents were employed locally, with the balance travelling to other areas in SA for work including a significant proportion in the surrounding areas¹³.
- It was estimated that there were approximately 2,400 jobs (2,300 fte jobs) on Kangaroo Island in 2009/10 (by place of remuneration) (Table 5).
- In 2009/10, the top four contributors to total jobs in the region were the agriculture forestry and fishing (22 per cent), retail trade and accommodation, restaurants and cafes (both 14 per cent) and health and community services (8 per cent) sectors (Table 5).
- The Kangaroo Island gross regional product (GRP) was estimated to be \$161 million in 2009/10 (Table 6). This compares with gross state product (GSP) in the same year of \$80.36 billion (ABS 2010b).
- The GRP of the Kangaroo Island region comprised approximately 0.2 per cent of the SA GSP.
- In 2009/10, the top contributors to GRP were the agriculture, forestry and fishing (20 per cent), transport and storage (10 per cent), ownership of dwellings (9 per cent), and accommodation, cafes and restaurants (8 per cent) sectors (Table 6).
- Expenditure by tourists accounted for one third and expenditure by households accounted for 22 per cent of the total value of goods and services imported into the region in 2009/10. Among of the intermediate sectors, the top importers in the region in 2009/10 were the building and construction (7 per cent), agriculture, forestry and fishing, transport and storage and accommodation, cafes and restaurants (5 per cent each) sectors (Table 7).
- Expenditure by tourists (\$121m) contributed approximately 57 per cent of the total value of exports from the region in 2009/10 (Table 7).
- The top contributors to the value of 'other exports' from the region in 2009/10 were the agriculture, forestry and fishing (48 per cent), accommodation, cafes and restaurants (20 per cent) and transport and storage (15 per cent) sectors (Table 7).

¹³ Based on detailed 'journey to work' employment data obtained from the ABS 2006 Census of Population and Housing using the *TableBuilder* database.

^a The economic profile of the regional economy is also available in terms of a 60-sector industry classification if required.

^b The ownership of dwellings sector is a notional sector designed to impute a return to the state's housing stock. Total value of output in this sector is an estimate of rent earned on leased dwellings and imputed rent on the balance of owner-occupied dwellings.

^c Gross operating surplus and gross mixed income.

Appendix 2 Activities and Uses Tables

The following tables summarise how activities and uses are expected to be managed once marine park management plans are adopted. The prohibitions and restrictions described in the tables (grey shaded boxes) will be represented in the *Marine Park (Zoning) Variation Regulations 2012*.

Section 4 of the *Marine Parks Act 2007* establishes four types of marine park zones. These are General Managed Use, Habitat Protection, Sanctuary and Restricted Access Zones.

Section 5 of the *Marine Parks Act 2007* provides for Special Purpose Areas. These are areas within a marine park, defined by management plans, in which specified activities will be allowed that would otherwise be prohibited or restricted by zoning.

No additional permits under the *Marine Parks Act 2007* will be required if the activity is already permitted or licensed under another Act.

Exemptions

- The Minister responsible for marine parks may provide a permit for any activity to take place that would not ordinarily be allowed in a specific zone in accordance with section 19 of the *Marine Parks Act 2007*.
- The Regulations also provide an exemption for any person acting in the course of an emergency.
- The Regulations will not apply to a person exercising official powers or functions under a State or Commonwealth Act or an Aboriginal person acting in accordance with an ILUA or Aboriginal tradition..

Existing activities and uses

When management plans are developed, existing and reasonably foreseeable activities and uses will be accommodated, (as outlined by the policy commitments endorsed by Government) by appropriate zoning, the application of Special Purpose Areas or the provision of permits. Apart from fishing activities, any permits, licences or leases that are current at the time of the adoption of management plans, will not be affected by these restrictions.

KEY

GMUZ	General Managed Use Zone - being a zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing ecologically sustainable development and use
HPZ	Habitat Protection Zone - being a zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing activities and uses that do not harm habitats or the functioning of ecosystems
SZ	Sanctuary Zone - being a zone primarily established so that an area may be managed to provide protection and conservation for habitats and biodiversity within a marine park, especially by prohibiting the removal or harm of plants, animals or marine products
RAZ	Restricted Access Zone - being a zone primarily established so that an area may be managed by limiting access to the area

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

RECREATION, EDUCATION AND OTHER

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Operating aircraft				limit	Limit: Aircraft cannot fly within 300m of the ground or sea level, and helicopters not within 500m of the ground or sea level.
Diving e.g. scuba/snorkel					
Pedestrian access					
Recreational boating/yachting					
Surfing/swimming					
Domestic animals			limit		Limit: Dogs on leads (up to 2m long); or animals confined to vessels/vehicles; or animals under effective control and behaving in accordance with relevant local Council by-laws.
Research			permit	permit	Permit ³ : A permit is not required for research authorised under another Act.
Commercial photography / film making			permit		Permit ³ : A permit is not required for commercial photography/film making authorised under another Act.
Competitions / organised events (non-fishing)			permit		Permit ³ : A permit is not required for non-fishing competitions/organised events authorised under another Act.
Tourism operations			permit		Permit ³ : A permit is not required for tourism operations authorised under another Act.

RECREATION, EDUCATION AND OTHER					
	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Animal feeding/baiting/berleying ¹					
Motorised water sports ²					
Lighting and supervision of fires		limit	limit		Limit: Lighting and supervision of fires is confined to designated areas.
Camping		limit	limit		Limit: Camping is confined to designated areas.
Collection of naturally occurring materials for burning in fires					

Notes:

¹ Feeding/baiting/berleying animals is not recommended in marine parks, except as required for fishing, aquaculture, research or tourism purposes.

² A person may transit through a sanctuary zone in a motorised vessel, but gear such as water skis or a wake board must be stowed.

³ Standard permits (and conditions) may be issued for activities that are deemed to be low impact. All other activities will be subject to case-by-case assessments and non-standard permits (and conditions) may be issued. DEWNR will develop a permit policy to provide clear guidance to users about activities that require permits.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

FISHING AND COLLECTING (commercial, recreational and traditional)

Fishing activities are regulated under provisions of the *Fisheries Management Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Bait digging/pumping					
Berleying for fishing					
Cockling (pipi and mud cockles)					
Collecting fish by hand (abalone, urchin, scallop, etc)					
Line fishing (including long lining)					
Netting (e.g. dab, haul, swing, gill, beach or power)					
Pot and trap fishing (including drop/hoop nets)					
Purse seine netting (including sardine)					
Raking (crab)					
Spear fishing					
Competitions / organised events (fishing)					

FISHING AND COLLECTING (commercial, recreational and traditional)

Fishing activities are regulated under provisions of the *Fisheries Management Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Traditional fishing and collecting (Aboriginal)					Limit: Activity is limited to persons who are exercising their rights in accordance with an ILUA or Aboriginal tradition.
Collecting seagrass/algae (including beach cast)					
Collecting sessile assemblages, stromatolites, fossils and archaeological remains					
Trawling					

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

HARBOR, NAVIGATION & TRANSPORT ACTIVITIES ¹

Harbor, navigation and transport activities are regulated under provisions of the *Harbors and Navigation Act 1993*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Navigation markers/aids					
General navigation and operation of vessels (other than anchoring)					
Anchoring of vessels – less than 80 metres (overall length)					
Anchoring of vessels – 80 metres and over (overall length)					Special Purpose Areas will provide for anchoring of vessels 80 metres and over in all harbors and in designated transshipment and anchoring locations and pilot boarding grounds
Permanent vessel moorings			permit		Permit: A permit will be required, which includes assessment by DEWNR and DPTI.
Dredging		limit			Limit: Activity is confined to harbors established under the <i>Harbors and Navigation Act 1993</i> .
Depositing dredged materials		limit			

Notes:

¹ Activities undertaken to support the ongoing operation of ports and harbors will be provided for in all zones. Also, given the extensive development expected to occur over the next 5-10 years in Upper Spencer Gulf, transitional arrangements will be required. For this purpose all HPZ, SZ and RAZ in Upper Spencer Gulf Marine Park will be declared Special Purpose Areas. This will provide for (a) developments comprising a development or project, or that part of a development or project, within the ambit of a declaration under section 46 of the *Development Act 1993*; and (b) activities comprising development approved under section 49 (crown development and public infrastructure) or section 49A (Electricity infrastructure development) of the *Development Act 1993*. This arrangement will be assessed at the time the first management plan is reviewed.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

COASTAL DEVELOPMENTS AND INFRASTRUCTURE ¹

Coastal developments and infrastructure are regulated under provisions of the *Development Act 1993*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Infrastructure (marinas, jetties, pontoons, breakwalls)					
Outfall and pipelines					
Renewable energy infrastructure (wind, wave, tidal)					

Notes:

¹ Coastal developments and infrastructure in HPZ will be managed under the *Development Act 1993* to achieve the definition of the zone (i.e. no harm to habitats or the functioning of ecosystems). Developments will be considered on a case by case basis to ensure that the achievement of the objects of the Act and the zone are supported appropriately. Development Plans and significant projects are informed by the Planning Strategy which now includes the objects of the *Marine Parks Act 2007* so consideration of these will inform the assessment process. In addition, as part of the assessment process, advice or direction may be required from the Coast Protection Board and/or the Environment Protection Authority and other authorities, depending on the nature of the development. These agencies also have the requirement to take into account the objects of the *Marine Parks Act 2007*.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

AQUACULTURE

Aquaculture activities are regulated under provisions of the *Aquaculture Act 2001*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Farming of bivalve molluscs					
Farming of aquatic animals (other than prescribed wild-caught tuna) with regular feeding					
Farming of prescribed wild-caught tuna					
Farming of algae					
Pilot leases					

Notes: Aquaculture in HPZ will be managed under the *Aquaculture Act 2001* to ensure that all reasonable and practicable measures are taken to achieve the definition of the zone (i.e. no harm to habitats or the functioning of ecosystems). The *Aquaculture Act 2001* operates in addition to the *Marine Parks Act 2007* and requires aquaculture policies to seek to further the objects of the *Marine Parks Act 2007* where they apply within a marine park.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

WASTEWATER DISPOSAL/ DISCHARGES

Discharges are generally regulated under provisions of the *Environment Protection Act 1993* and the *Environment Protection (Water Quality) Policy 2003*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Discharge ¹					Discharges regulated under sections 3(2) or 8(7) of Schedule 1 of the <i>Environment Protection Act 1993</i> are prohibited
Extraction and disposal for a desalination plant ¹					
Vessel discharge of wastewater ²					Specifically regulated by Clause 36 of the <i>Environment Protection (Water Quality) Policy 2003</i>

Notes:

¹ Discharges in HPZ will be managed under the *Environment Protection (Water Quality) Policy 2003* to ensure that all reasonable and practicable measures are taken to achieve the definition of the zone (i.e. no harm to habitats or the functioning of ecosystems).

² Wastewater includes black water, concentrated black water and grey water as defined by the *Environment Protection (Water Quality) Policy 2003*.

KEY	
	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is consistent with the definition of the zone when conducted in accordance with stated limits.
*	Activity is deemed to be inconsistent with the definition of the zone and will not be considered until such time as it can be demonstrated otherwise.
	Activity is deemed to be inconsistent with the definition of the zone and will not be permitted.

RESOURCE EXPLORATION AND PRODUCTION

These activities are regulated under provisions of the *Mining Act 1971*, the *Petroleum and Geothermal Act 2000*, the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982* to achieve the objectives of the marine park zones described under the *Marine Parks Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Exploration (passive)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– satellite/high level airborne					
– airborne surveys				*	*Will depend on the nature and timing of the proposed survey in relation to key environmental considerations (e.g. breeding and migration cycles of protected species).
– geophysical/geochemical surveys			limit		Limit: Will depend on the nature and timing of the proposed survey in relation to key environmental considerations (e.g. breeding and migration cycles of protected species).
Exploration (active)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– geological sampling			*		* Will depend on nature of proposed surveying
– geophysical/geochemical surveys			*		* Will depend on nature of proposed surveying
– drilling (drill rig within zone)		*			* Will depend on nature of proposal and its location
– deviated drilling (drill rig outside zone)			limit	*	Limit: Activity will need to be conducted in accordance with approved conditions * Deviated drilling from outside zone may be considered if consistent with the zone
– trenching/bulk sampling	*	*			* Will depend on nature of proposal and its location

RESOURCE EXPLORATION AND PRODUCTION

These activities are regulated under provisions of the *Mining Act 1971*, the *Petroleum and Geothermal Act 2000*, the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982* to achieve the objectives of the marine park zones described under the *Marine Parks Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Gas storage					
– carbon sequestration (surface facilities within zone)		*	x	x	* Will depend on nature of proposal and its location
– carbon sequestration (surface facilities outside zone)			*	*	* Deviated drilling from outside zone may be considered if consistent with the zone
Production/ Extraction	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– seawater (for extraction of resources such as salt)					
– through drillhole (surface facilities within zone)		*			* Will depend on nature of proposal and its location
– through drillhole (surface facilities outside zone)			limit	*	Limit: Activity will need to be conducted in accordance with approved conditions * Extraction from deviated drillhole from outside zone may be considered if consistent with the zone
– underground mining with surface facility	*				* Will depend on nature of proposal and its location
– underground mining with no surface facility		limit	*	*	Limit: Activity will need to be conducted in accordance with approved conditions. May be considered if activity does not compromise habitats or the functioning of ecosystems. * Will depend on nature of proposal and its location.
– pipeline on/above ground/seabed/trenched		*			* Will depend on nature of proposal and its location
– pipeline underground			*	*	* Will depend on nature of proposal and its location
– seabed dredging	*				* Will depend on nature of proposal and its location
– pit-type extraction	*				* Will depend on nature of proposal and its location

RESOURCE EXPLORATION AND PRODUCTION

These activities are regulated under provisions of the *Mining Act 1971*, the *Petroleum and Geothermal Act 2000*, the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982* to achieve the objectives of the marine park zones described under the *Marine Parks Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Processing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– mineral facility (mobile e.g. vessel based)	*				* Will depend on nature of proposal and its location
– mineral facility (permanent)					
– petroleum/geothermal facility					

Notes: All licence applications under the *Mining Act 1971* and the *Petroleum and Geothermal Act 2000* within and adjacent to marine parks are referred by the Minister for Mineral Resources and Development to the Minister for Sustainability, Environment and Conservation for concurrence. A referral process is required for the approval of on-ground exploration, and production activities, as part of the relevant mining regulation protocols between DMITRE and DEWNR. This provides for case-by-case assessment of each proposed activity. This includes activities deemed consistent with with the definition of the zone. The table indicates which activities are likely to be restricted when leases, licences and permits are considered by the Ministers. Activity proposals are considered by assessing risk. Activities likely to compromise the values of any zone would not be approved. A similar process is expected to be undertaken for activities authorised under the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982*.

This table may be revised over time as new technologies and techniques are developed, to ensure that new technologies are appropriately considered, consistent with marine park zone objectives.

The following types of special purpose area may be identified in accordance with section 13(1)(c) of the *Marine Parks Act 2007*. Notwithstanding the zoning of the area, the following activities will be permitted in the special purpose areas.

Special Purpose Areas (significant economic development)

Activities comprising a development or project, or that part of a development or project, within the ambit of a declaration under section 46 of the *Development Act 1993*; and

Activities comprising development approved under section 49 (Crown development and public infrastructure) or section 49A (Electricity infrastructure development) of the *Development Act 1993*.

Special Purpose Areas (harbor activities)

Activities undertaken by or on behalf of the Minister responsible for the administration of the *Harbors and Navigation Act 1993*, or a port operator, for the purposes of maintaining or improving a harbor or port. (Harbor, port and port operator have the same meanings as in the *Harbors and Navigation Act 1993*.)

Special Purpose Areas (submarine cables and pipelines)

Activities undertaken for the purposes of maintaining or improving submarine cables or pipelines comprising public infrastructure (within the meaning of section 49 of the *Development Act 1993*).

Special Purpose Areas (transhipment)

Activities comprising the establishment, maintenance or improvement of facilities for a transhipment point prescribed or to be prescribed under the *Harbors and Navigation Regulations 2009*; and

Activities comprising or connected with loading or unloading a vessel at a transhipment point prescribed under the *Harbors and Navigation Regulations 2009*.

Special Purpose Areas (anchoring)

Activities comprising anchoring a commercial vessel (within the meaning of the *Harbors and Navigation Act 1993*) in an area recommended for that purpose by way of a Notice to Mariners by the Minister responsible for the administration of the *Harbors and Navigation Act 1993*.

Special Purpose Areas (shore-based recreational line fishing)

Recreational fishing from the shore by use of a hand line or rod and line. (Hand line, recreational fishing and rod and line have the same respective meanings as in the *Fisheries Management Act 2007*.)

Special Purpose Areas (Murray Mouth dredging)

Activities associated with dredging undertaken for the purposes of maintaining or improving water flows through the mouth of the River Murray.

Special Purpose Areas (Defence Prohibited Area)

Activities undertaken by the Department of Defence in relation to the Proof and Experimental Establishment (Port Wakefield).

Special Purpose Areas (Aquaculture)

Activities authorised under the *Aquaculture Act 2001*.

Appendix 3 List of Parties Consulted

Name		Affiliation	Organisation
Natalie	Ban	Research Fellow	James Cook University
James	Bennett	Fishery Management Officer	Department for Primary Industries and Resources SA
Michelle	Besley	Fishery Manager	Department for Primary Industries and Resources SA

Appendix Table 4-2 Tourism, education & wellbeing impacts for Southern Kangaroo Island Marine Park

	Very unlikely	Unlikely	Neither likely nor unlikely	Likely	Very likely	Don't know
MP likely to increase tourism in our area						
DENR zone	6	1	0	1	1	0
MPLAG zone	5	1	2	0	1	0
There will be more opportunity for charter boats to exploit ecotourism opportunities						
DENR zone	6	1	1	1	0	0
MPLAG zone	3	4	1	1	0	0
MP will provide increased opportunities for education about marine life						
DENR zone	4	3	0	2	0	0
MPLAG zone	4	3	1	1	0	0
MP will provide increased opportunities for our understanding of marine conservation issues						
DENR zone	3	1	2	3	0	0
MPLAG zone	3	4	0	2	0	0
MP will create new employment opportunities for local people						
DENR zone	3	4	1	1	0	0
MPLAG zone	4	3	1	1	0	0
MP will have no impact (positive or negative) on me or my family						
DENR zone	4	3	1	0	1	0
MPLAG zone	3	1	1	3	1	0
MP will improve the quality of life of people in my community						
DENR zone	4	3	1	1	0	0
MPLAG zone	4	3	1	1	0	0
MP will improve my personal quality of life						
DENR zone	5	2	1	0	1	0
MPLAG zone	5	2	1	0	1	0
MP will negatively change our way of life*						
DENR zone	1	0	0	3	5	0
MPLAG zone	1	2	2	2	2	0

Note: 9 of 14 members responded to the MPSIAT. *Question is negatively scored.
