Acknowledgements

The consulting team has relied heavily on the voluntary cooperation of a range of government, industry and broader community representatives and is indebted to these people for providing the necessary information, guidance and assistance (list provided in Appendix 3). Janine Baker provided assistance to the ecological impact assessment team early in the project and we are grateful for that. DEWNR and PIRSA officers provided assistance, were supportive of the data collection and interpretation and offered valuable advice throughout.

Executive Summary

The Upper South East Marine Park covers 906km² and is divided into two sections: from 11 km north of Tea Tree Crossing to the Maria Creek outlet in Kingston and from Wright Bay to the northern most point of Stinky Bay.

Impacts of implementing the draft management plans were assessed against a base case scenario of no management plans. The base case is not static, and requires an understanding of the existing trends in natural resource, economic and social conditions. There are external factors which influence both the 'with management plan' and the base case scenarios that were taken into consideration

Marine Park Profile

Habitats in the park are influenced by the generally cool water, and nutrient rich Bonney upwelling from December to May, and also by estuaries, creeks and drainage channels connecting the fresh and marine waters.

The northern part of the park includes a long stretch of the Coorong coast with exposed, high energy sandy beaches backed by vast dune systems, southwards to Lacedpede Bay, with dense and extensive seagrass meadows in the near shore region and reef further offshore.

The southern part of the park is characterised by highly exposed rocky headlands, wave-cut shore platforms, fringing reefs, and extensive subtidal limestone reef formations, and there are a number of small rocky islands (Godfrey Islands) within Baudin Rocks Conservation Park. There are also dense seagrass beds mixed with sandy patches in the shallow waters along Long Beach, and dense seagrass beds around Nora Creina.

From a socio-economic viewpoint the community relevant to this marine park is that of the Upper South East region. The two statistical local areas (SLAs) that comprise the region are Kingston (DC) and Robe (DC). Some of the key socio-economic characteristics of the region include:

- a resident population of around 4,000 persons in 2010/11.
- a smaller concentration of younger people (aged 0 to 14 years) and of persons aged 15 to 64 years and, consequently, a higher share of people aged 65 and over compared with the State.
- The total population is projected to increase by approximately 5 per cent by 2026, whereas the SA population is expected to increase by around 23 per cent.
- The unemployment rate in the Upper South East region was 3.3 per cent in the June quarter of 2011, below the state as a whole.
- Approximately 50 per cent of the businesses operating in the Upper South East region were classified in the agriculture, forestry and fishing sector.
- Mean taxable income was \$48,000 in 2009/10, 11 per cent below SA's average of \$54,000.
- Over the period 2000/01 to 2010/11, median dwelling (units and houses) prices increased by 233 per cent (\$285,000 in 2010/11) compared with a 197 per cent in SA as a whole (\$357,500).

- In 2009/10, the top contributors to GRP were the agriculture, forestry and fishing (34 per cent), ownership of dwellings (10 per cent) and manufacturing, accommodation, cafes and restaurants and building and construction (7 per cent each) sectors.
- The commercial fishing and tourism industries are important to the local economy in terms of contributing to jobs and GRP. Directly and indirectly commercial fishing and aquaculture contributed 3 per cent of GRP (\$4.1 million) and 4 per cent of employment (59 fte jobs) in 2009/10. By comparison, the tourism sector contributed 8 per cent of GRP (\$11.1 million) and 12 per cent of employment (200 fte jobs).

Ecological Impacts

In general the habitats within the park are considered to be in a condition comparable to the time of European settlement although there are some potential, but minor, threats to water quality from agricultural run-off, septic tank overflows or dredging in some areas. A number of species within the park were assessed as having lower abundances compared with pre-European levels. The current state of the ecosystems in the park was generally considered to reflect the condition of their component habitats and species.

The proposed management arrangements are predicted to have a net positive long-term impact on South Australia's marine biodiversity. Without the proposed management arrangements there is potential for future activities to occur that could impact on marine habitats, species and ecosystems. The positive ecological impacts inside the Upper South East Marine Park will include (1) maintenance of habitats and ecosystems in relatively good condition, and (2) changes in some ecosystems towards a more natural and resilient condition. Such changes include increases in the size and abundance of some fished species, which may potentially have socio-economic benefits, and the overall shift towards a more natural ecosystem is also expected to provide a number of management benefits, although these potential benefits have not been quantified.

The proposed zoning alone does not address the potential water quality issues listed above, which would require complementary management measures, but the various zone restrictions (with habitat protection and sanctuary zones covering about 45 per cent and 10 per cent of the park, respectively) will assist with the future protection of habitats from a range of potentially damaging activities that may otherwise be possible under the existing management framework. Some habitats of particular conservation note include the Coorong beach, seagrass and macroalgae beach wrack (which is important for nutrient cycling and food webs), and reefs with a high diversity of macroalgae, including species with limited range. Maintenance of healthy habitats in general is essential for the functioning of ecosystems and the long-term sustainability of fisheries, aquaculture, and marine-based tourism.

There is some uncertainty about the extent to which zoning will provide future protection within Guichen Bay, due to the proposed establishment of a special purpose area (harbor activities), and a special purpose area (aquaculture) over the sanctuary zone north of Kingston. However, it is expected that the designation of areas worthy of zoning as sanctuary and habitat protection zones would assist in directing future activities appropriately.

A number of species when considered in isolation (namely southern rock lobster, blacklip abalone, snapper, and Goolwa cockle) have potential to increase in size and abundance inside some of the sanctuary zones. Southern rock lobster, blacklip

abalone and Goolwa cockle have potential for increased larval export to areas outside the sanctuary zones, while southern rock lobster, snapper and Goolwa cockle have potential for spill-over of adults to areas outside the sanctuary zones. However, some of the ecosystems in which these species interact are expected to shift towards a pre-European state, which may result in declines rather than increases of some species such as blacklip abalone. Two resident reef fishes, sea sweep and bluelthroat wrasse, that are vulnerable to localized depletions will likely benefit from protection inside one of the sanctuary zones.

Economic Impacts

In summary, the proposed draft zoning is expected to have the following economic impacts on the following sectors of the regional economy: potential positive impact in the tourism sector in the medium to long term, neutral impact in the aquaculture, property, marine infrastructure and operations, mining and coastal development sectors and short, medium and long term negative impacts in the commercial fishing sector.

Commercial fishing

Table ES1 shows the economic impact on the regional economy of marine park zoning on all affected fisheries. Impacts are based on SARDI's average annual displaced catches and corresponding average annual prices expressed in 2011 dollars. In aggregate, it was estimated that the impact of marine park zoning will generate the following loss of regional economic activity on an ongoing annual basis.

- Approximately \$0.08m in GRP, which represents 0.1 per cent of the regional total (\$146m).
- Less than 1 fte job which represent less than 0.005 per cent of the regional total (1,699 fte jobs).
- Approximately \$0.06m in household income, which represents 0.1 per cent of the regional total (\$70m).

Table ES1 Regional economic impact of marine park zoning

Sector	Output		Employment ^a		Household Income		Contribution to GSP	
	(\$m)	%	(fte jobs)	%	(\$m)	%	(\$m)	%
Direct effects

Source: EconSearch analysis

Because the reduced access to the fishery will be permanent, the impacts reported in Table ES1 are an estimate of the on-going annual impact. The State Government has

committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above.

The economic impacts could be greater as the estimated displaced catch may understate the actual catch in some sanctuary zones if they are located on important fishing grounds (hot spots). Impacts could also be over-estimated if sanctuary zones avoid hot spots (Ward and Burch 2012; Stevens et al. 2011a and 2011b). The zoning process attempted to avoid impacts on fishing by avoiding important fishing grounds. PIRSA has advised that statewide some draft sanctuary zones are located on important fishing grounds (hotspots), however advice specific to this park has not been provided. Industry-derived estimates of displaced catch (which have not yet been reviewed by SARDI) are less than the SARDI estimates. Consequently, the economic impacts would be less than those presented in Table ES1.

Although the aggregate quantified impacts may not appear large in absolute terms, the economy of the Upper South East region is a relatively dependent one. The region is highly reliant on the agriculture, fishing and forestry industries as the core drivers of economic activity. Indeed of the 587 businesses in the region almost 50 per cent are classified in the agriculture, forestry and fishing sector.

However unemployment in the Upper South East region is very low (3.3 per cent at June 2011) when compared with the state average (5.2 per cent). This suggests that alternative regional opportunities for unemployed labour may be available over time, depending on the skills of those seeking work and the skills demanded by potential employers.

Aquaculture

Lacapede Bay Aquaculture Zone overlaps the entirety of SZ-2, however a special purpose zone will be placed over the sanctuary zone and HPZ-2 to allow for future planned finfish aquaculture activities. As such, there are no known current or potential impacts expected from the draft zoning in this marine park on current or future aquaculture enterprises. This is consistent with Government policy commitments.

Tourism

The actual placement of sanctuary zones is unlikely to place real restriction on recreational fishing with sanctuary zones over highly fished areas limited. However, the perception that recreational fishing opportunities will be restricted by implementing 'no-take' zones is real. So there is potential for a downturn in fishing-based tourism in the short-term until visitors are informed and convinced of the actual situation on the water. In the long-term, managed marine parks will provide certainty that the marine environment within them is being protected and this may support the growth of the ecotourism industry, provided the necessary investment in tourism infrastructure and support services is undertaken. Other, non-extractive tourism, such as diving, is likely to benefit from the implementation of sanctuary zones.

Property prices

Given that the overall impact on the region is not expected to be large in absolute terms, the impact on property values is, similarly, not expected to be significant. States of Australia have introduced marine parks with sanctuary zones in the last decade without any known long-term effects on property values. External factors

notwithstanding, the trend in Upper South East residential property prices illustrated in the regional socio-economic profile is unlikely to be affected by the proposed marine park zoning.

Port, harbour and shipping operations

The harbour of Robe has been declared a special purpose area and no significant impacts on shipping activities arising from zoning in this park are expected, which is consistent with Government policy commitments.

Mining

The coastal and inshore section of Guichen Bay is partially covered by two geothermal exploration licences. Two Petroleum Exploration Licences are adjacent to this marine park at Nora Creina and Guichen Bay. A gazettal of petroleum acreage has been made adjacent to the southern part of the park in Commonwealth waters. Conditions attached to existing licences will not change and the operations to which these licences refer to will not be affected by zoning.

Coastal development

There are no significant projects or infrastructure in this marine park. There is a proposal, at the prefeasibility stage, to develop a barge point at Kingston SE Harbor, just outside the park. No impacts from the proposed draft zoning are expected.

Social Impacts

The overall social impacts of the Upper South East Marine Park on communities living in the Upper South East region are expected to be low given the magnitude of the economic impacts that have been projected. Commercial fishing is an important source of employment and is estimated to contribute 59 jobs to employment in the region, compared with tourism which contributes 200 jobs. Economic impact assessment identifies the loss of less than one fte commercial fishing-related jobs in a region of low unemployment and low levels of measured relative disadvantage. The State Government has committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above. The impact on recreational fishing is considered to be low with adjustments in zoning designed to minimise any potential negative impacts. Consequently, any impact on local community identity as a fishing centre and on fishing as a way of life is also likely to be low.

No impacts on local government operations, infrastructure and revenue or compliance related activities are expected as a result of the proposed draft zoning.

Experience elsewhere in Australia and internationally, suggests that a range of benefits from the establishment of marine parks become evident over time. These include increased opportunities for education about marine life and conservation, and increased tourism and ecotourism opportunities. This experience indicates that these benefits usually take approximately five years to be evident, and that in the earliest stages of marine protected areas being developed, local communities are more likely to identify possible negative impacts than potential benefits. It takes time to observe how the park's ecological and economic impacts evolve, with social impacts (positive or negative) flowing from these.

Marine parks have broad support in the South Australian community. Market research commissioned by the state government between 2006 and 2012 found strong support for the concept of marine parks among South Australians with approximately 85 per cent in favour of them in 2012 (87 per cent support in metropolitan Adelaide and 82 per cent support in regional areas). Those least likely to support marine parks have been fishing groups (in 2009 55 per cent of respondents who did not support marine parks identified restricted fishing as the reason, this dropped to 39 per cent in 2012). Between 2011 and 2012 the market research findings identify a decline in those who believe they will have limited access to marine parks and an increase in those who associate swimming, boating and snorkelling with marine parks.

A critical factor in determining the ultimate impact of marine parks is how well local communities are able to adapt to change and how cohesive they are in supporting each other through change. The level of support provided by government to adjust to change is also crucial. One very important factor that affects community attitudes is how informed they are, and feedback from market research and marine park local advisory groups, as well as analysis of media reports indicates a gap in this information. In particular, increasing communities' understanding of the scientific rationale underpinning marine protected areas, and the benefits that these can bring, needs to be enhanced. This is one of the functions of impact assessment which is best conceived of as a continuous process informing both the establishment and operation of marine parks.

1. Introduction

In 2009, the SA Government established 19 marine parks covering approximately 44 per cent of the State's waters. The Government has prepared a draft management plan for each of South Australia's marine parks. These draft management plans include a number of proposed zones where certain activities will be restricted for biodiversity conservation purposes. Global scientific research is demonstrating that marine parks have the potential to conserve coastal and marine biodiversity (PISCO 2007).

However, it is recognised that the zoning of marine parks will come with some costs such as restrictions on commercial and recreational activities. The *Marine Parks Act 2007* provides that when the Minister prepares a draft management plan, an impact statement of the expected environmental, economic and social impacts of the management plan must also be prepared. The impact statements are designed to assist the community to understand the projected impacts of the draft management plans¹ during public consultation.

The Department of Environment, Water and Natural Resources (DEWNR) contracted EconSearch Pty Ltd and its project partners to provide:

1. Impact statements for each of the 19 marine parks which describe both positive and negative impacts of implementing the draft management plans on the local marine ecosystems, economies and communities. These impact statements are to comply with the SA Government's Regional Impact Assessment Statement Policy (RIAS) and with Section 14(4)(c) of the *Marine Parks Act 2007*.
2. A state level Cost Benefit Analysis (CBA) of the proposed management of the 19 marine parks through zoning regulations. The CBA is to comply with the SA Governments Regulatory Impact Statement (RIS) Policy, but is not a RIS in its own right. The results of the CBA are presented in the *Marine Park Impact Statements Main Report*.

1.1 Marine Park Planning Process

Marine parks in South Australia will be zoned for multiple-uses, providing for varying levels of conservation, recreational and commercial use. Zoning provides the basis for the management of marine parks, in accordance with the objects of the *Marine Parks Act 2007*. Figure 1–1 describes the marine park zones.

The Government has developed a table of activities and uses that occur in the marine environment and summarises how these activities are expected to be managed in each marine park zone. The prohibitions and restrictions in the matrix will be included in regulations that will be finalised when marine park management plans are adopted (see Appendix 2).

¹ The impact statements were prepared before the draft management plans were finalised.

Figure 1–1 Marine Park Zones

<i>The management plans will contain the following management zones:</i>	
General managed use	A zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing ecologically sustainable development and use.
Habitat protection	A zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing activities and uses that do not harm habitats or the functioning of ecosystems.
Sanctuary	A zone primarily established so that an area may be managed to provide protection and conservation for habitats and biodiversity within a marine park, especially by prohibiting the removal or harm of plants, animals or marine products.
Restricted access	A zone primarily established so that an area may be managed by limiting access to the area.
<i>To accommodate site specific community needs, within a marine park there may be:</i>	
Special purpose area	An area within a marine park, identified as a special purpose area and with boundaries defined by the management plan for the marine park, in which specified activities, that would otherwise be prohibited or restricted as a consequence of the zoning of the area, will be permitted under the terms of the management plan.

Source: Adapted from sections 4 and 5, *Marine Parks Act 2007*.

The suite of protection provided by this framework will assist with the delivery of the objects of the *Marine Parks Act 2007*. Specifically:

- a) “to protect and conserve marine biological diversity and marine habitats by declaring and providing for the management of a comprehensive, adequate and representative system of marine parks; and
- b) to assist in—
 - i. the maintenance of ecological processes in the marine environment;
 - ii. the adaptation to the impacts of climate change in the marine environment;
 - iii. protecting and conserving features of natural or cultural heritage significance;
 - iv. allowing ecologically sustainable development and use of marine environments; and
 - v. providing opportunities for public appreciation, education, understanding and enjoyment of marine environments.”

The Government dedicated significant resources to gathering environmental, economic and social knowledge and working with community and key stakeholder interests to develop draft park zoning. Key elements of this process are described in Table 1-1.

Table 1-1 Public consultation process to date

Initiative	Timeframe
Statewide consultation on Liberal Government draft policy document <i>Marine protected areas: a shared vision</i> . 23 public meetings/information sessions held involving some 1600 people.	2001/02
Labor Government policy <i>Blueprint for the SA representative system of marine protected areas</i> developed following the above consultation process, with further consultation undertaken with key stakeholders and across relevant government agencies.	2003/04
The Draft <i>Encounter Marine Park Zoning Plan</i> was released for 3 months' public consultation as a pilot process to test key concepts for statewide application. 427 submissions were received. Local consultation was undertaken targeting the Fleurieu Peninsula, Kangaroo Island and Adelaide. 15 public information days and 48 stakeholder group meetings were held.	2005
The Marine Parks Draft Bill (2006) was developed and 3 months' statewide consultation was undertaken on this, involving 16 regional public meetings/information sessions and 112 submissions.	2006-07
On 29 January 2009, the Minister for Environment and Conservation released the outer boundaries of 19 new marine parks, for a public consultation period of three months. During the comment period, approximately 15,000 copies of the consultation brochure with submission form were distributed through various means. By the end of the three month consultation 2,357 submissions had been received by the Department for Environment and Heritage (DEH) representing a total of 3, 295 individual respondents. In addition, 56 public information days were held and 4,800 people were estimated to have been directly engaged in the consultation process. Nearly 150 groups provided comment on either the marine parks network or one or more individual marine parks. These included key interest groups, organisations, businesses, associated bodies, local governments, not for profit organisations, community groups and recreational clubs. Three regional Pilot Working Groups with multi sectoral representation were established to advise on outer boundary design with minimum three meetings of each. Outer boundaries of seven Parks were amended as a result of the consultation process.	2009
Phase 1 - Management planning for South Australia's marine parks network. A Statewide community engagement process was undertaken involving:	Late 2009 onwards
<ul style="list-style-type: none"> 13 Marine Park Local Advisory Groups (MPLAGs) established across the state, and the Great Australian Bight Marine Park Consultative Committee (GABMPCC). 67 public MPLAG meetings were facilitated. Peak stakeholders were invited to provide early advice on their preferred zoning for marine parks. A key stakeholder forum was held where broad agreement was reached on the priority areas for conservation 	April 2012

Source: Adapted from SA Government Submission to the Marine Parks Select Committee, 2011.

The Scientific Working Group and Marine Parks Council of South Australia are independent advisory bodies providing advice to the Minister. In finalising draft management plans for public consultation, both the Scientific Working Group and Marine Parks Council assessed the merits of the draft zoning schemes and strategies for management against the objects of the *Marine Parks Act 2007* and provided the Minister with independent advice.

In finalising draft management plans, discussions were held with members of the Marine Parks Steering Committee as representatives of relevant Government agencies. The Steering Committee considered whether draft management plans took appropriate consideration of all relevant statutory requirements and effectively implemented the Government's policy commitments for marine parks.

Based on the collective advice from MPLAGs, other community members, peak stakeholders and discussions across relevant agencies, the Government developed a

draft management plan with zoning for each of the 19 marine parks for formal public consultation. The draft management plans are currently out for public consultation.

1.2 Policy Commitments

The Government has made a range of policy commitments² to help ensure South Australian lifestyles and livelihoods are maintained, and to provide more certainty for the industries that use the marine environment. The commitments informed the design of zoning for each marine park, and include:

- access to specific key recreational and commercial fishing sites through appropriate zoning
- access for existing and future aquaculture development through appropriate zoning
- certainty that marine parks will not affect access to, or use of, jetties, break walls or boat ramps
- accommodation of approved coastal development as well as future development and infrastructure needs
- accommodation of approved mining, petroleum and geothermal development activities
- accommodation of shipping and harbor activities
- certainty that marine parks will not create an extra approval process as government agencies will work together to streamline administration.

1.2.1 Displaced Commercial Fishing Policy Framework

The adoption of marine park management plans with zoning will displace some commercial fishing activities. This Policy Framework³ describes the steps that support this process:

1. Avoid displacement by pragmatic zoning;
2. Redistribute effort only where possible without impacting ecological or economic sustainability of the fishery;
3. Market-based buy back of sufficient effort to avoid impact on the fishery;
4. Compulsory acquisition as a last resort option.

The Government expects that market based buy back of effort and any necessary compulsory acquisition will be undertaken under the authority of the Minister for Agriculture, Food and Fisheries. The Minister for Sustainability, Environment and Conservation will consider any fair and reasonable compensation in accordance with section 21 of the *Marine Parks Act 2007*, and it is envisaged that regulations will be drafted to support this process.

² A complete list of the commitments is available at Appendix 2 of the *South Australia's Marine Parks Network Explanatory Document* which accompanies the draft management plans.

³ The Displaced Commercial Fishing Policy Framework is provided at Appendix 5 of the *South Australia's Marine Parks Network Explanatory Document*.

2. Method of Assessment

This study undertook both an impact analysis and an economic evaluation, in the form of a cost benefit analysis (CBA), of implementing the marine park draft management plans. The method and results of the CBA are presented in the Main Report.

Impacts of implementing the draft management plans were assessed against a base case scenario of no management plans. This also applies to the CBA. The base case is not static, and requires an understanding of the existing trends in natural resource, economic and social conditions. There are external factors which influence both the 'with management plan' and the base case scenarios that need to be taken into consideration.

2.1 Ecological

The ecological impact assessment was required to:

1. describe the current status of the marine habitats, plants and animals in each marine park;
2. discuss (in qualitative terms) the services that the protected ecosystems provide to South Australians (where not possible to measure their economic value);
3. identify the range of activities that impact on the environment and quantify how the draft management plans will influence the marine environment, against a base case of no management plans;
4. assess the implications of the management plans in 5, 10 and 20 years on species diversity and abundance, marine habitats, and ecosystem function;
5. include case studies that highlight the potential impacts of the draft management plans on iconic and threatened species and contribute to case studies that effectively communicate the trade-offs between the different environmental, social and economic factors.

The outcomes for Items 1, 4 and 5 listed above are included in each individual park statement and can be found in Section 4 of this impact statement. The outcomes for Item 2 are generic across the park network and are briefly introduced in Section 3.1 of this impact statement and detailed in Appendix 4 of the Main Report (see Ecosystem services). The outcomes for Item 3 inform the outcomes for Items 4 and 5, and are discussed in a generic sense in Appendix 1.1.4 of the Main Report. It should be noted that despite the broad spectrum of activities that can potentially be influenced by zoning under the *Marine Parks Act 2007*, the proposed zones have been located in such a manner that very few current activities will be affected. The most widespread of these is fishing, with the cessation of all forms of fishing inside most SZs and RAZs (with exceptions relating to existing restrictions), and benthic trawling inside HPZs of six parks. Furthermore, predicting species and ecosystem responses to the cessation of fishing is highly complex (see Appendix 1.3 of the Main Report) and, compared to other activities, there are generally more data available to inform the assessment. Consequently, the extent and depth of discussion on fishing-related responses may appear to be disproportionate in comparison to other activities, but this is not intended to place any particular emphasis on fishing as a threatening process.

The process of ecological impact assessment undertaken for the current report can essentially be summarised by three main steps:

1. Activities and uses: determining the range of activities and uses that potentially impact on the marine environment under current management regimes, and then determining how the marine park zoning and management arrangements will influence them.
2. Baseline: determining the current status of the marine species, habitats, and ecosystems in the marine parks; what are we comparing future changes against?
3. Predictions: assessing the implications of the marine park zoning and management arrangements in 5, 10 and 20 years on species, habitats, and ecosystems against the case of no marine park zoning and management arrangements.

A total of 205 species or species groups, 11 habitat types, and 11 habitat-based ecosystem types were selected for the impact assessment (see Appendices 2, 4 and 6 of the Main Report).

Further details of the methodology can be found in Appendix 1 of the Main Report.

2.2 Economic

At a regional level, the economic impact analysis was based on the input-output method. This method provides a standard approach for the estimation of the economic impact of a particular activity. The input-output model is used to calculate industry multipliers that can then be applied to various change scenarios, as has been done in this study.

For this impact assessment an input-output model was constructed specifically for the Upper South East (see Map in Appendix 1). The model is known as a Regional Industry Structure and Employment (RISE) model which is an extension of the standard input-output model that is used within the SA Government for various types of impact assessment.

At a micro level individual businesses could be impacted by marine parks. To assess the impact on commercial fishing operations representative financial models of fishing businesses were constructed for each of the relevant fishing sectors. These models were based on financial information collected and reported by EconSearch (2010) over the past 13 years. The results of the financial modelling provided input into the regional RISE model to estimate impacts on the regional economy.

The principal driver for change in fishing industry operations and profitability is lost access to the resource. Estimates of displaced catch were provided by the South Australian Research and Development Institute (SARDI). PIRSA Fisheries and Aquaculture provided detailed information on the recreational and commercial fisheries relating to the:

- current condition of the fishery;
- outlook for the fishery without marine parks management plans;
- marine parks impacts on the fishery; and
- measures to mitigate anticipated impacts.

Discussions were also held with representatives of each of the commercial fishing sectors, recreational fishing, mining, various State Government departments and Local

Government (see Appendix 3). These discussions provided insights to the likely responses of businesses and organisations associated with or members of the interviewee's organisation. Because of time and resource constraints it was not possible to undertake discussions with or collect data from all potentially impacted parties.

Because some of the activities that could potentially be impacted by marine parks are related to the tourism sector, the Upper South East RISE model includes explicit specification of the regional tourism industry. This was done by following the standard ABS method of constructing tourism satellite accounts.

The following indicators of economic impact were generated using the economic modelling framework described above:

- value of output,
- gross regional product (GRP),
- household income and
- employment.

(Value of) Output is a measure of the gross revenue of goods and services produced by commercial organisations (e.g. the value of processed seafood products) and gross expenditure by government agencies. Total output needs to be used with care as it can include elements of double counting when the output of integrated industries is added together (e.g. the value of processed seafood includes the beach value of the fish).

Gross regional product (GRP) is a measure of the net contribution of an activity to the regional economy. GRP is measured as value of output less the cost of goods and services (including imports) used in producing the output. In other words, it can be measured as the sum of household income, 'gross operating surplus and gross mixed income net of payments to owner managers' and 'taxes less subsidies on products and production'. It represents payments to the primary inputs of production (labour, capital and land). Using GRP as a measure of economic impact avoids the problem of double counting that may arise from using value of output for this purpose.

Household income is a component of GRP and is a measure of wages and salaries paid in cash and in-kind, drawings by owner operators and other payments to labour including overtime payments, employer's superannuation contributions and income tax, but excluding payroll tax.

Employment is a measure of the number of working proprietors, managers, directors and other employees, in terms of the number of full-time equivalent (fte) jobs. Employment is measured by place of remuneration rather than place of residence.

Further details of the economic method can be found in Section 3.2 of the Main Report.

2.3 Social

The identification of potential social impacts of different marine park zoning options has been informed by a review of relevant research, analysis of the Environmental, Economic and Social Values Statements developed for each park, a review of the minutes and available correspondence of Marine Parks Local Advisory Groups (MPLAG), an overview of local media reports on the parks, an examination of market research on community perspectives on the establishment of marine parks, an

assessment of MPLAG member perspectives on zoning options and targeted impact assessment interviews. An analysis of SAMPIT⁴ data was also undertaken to identify the potential impact of the zoning proposal on recreational fishing. An examination of the impacts of the establishment of marine parks in relevant jurisdictions was undertaken to inform the design of the social impact assessment tool.

A 'Marine Parks Social Impact Assessment Tool' (MPSIAT) was developed by the Australian Workplace Innovation and Social Research Centre to identify and compare potential social impacts from the preliminary DEWNR marine park sanctuary zones (DEWNR zones) and zones resulting from Marine Park Local Advisory Groups advice (MPLAG zones). MPSIAT respondents provided perspectives on impacts of zoning proposals based on their experience and expertise. Final MPLAG zone advice was normally based on a majority view. While this approach to decision making delivers a decision it does tend to obscure differences in views and opposing views on potential impacts from the perspectives of different stakeholders. The MPSIAT has been designed to shed light on these differences in order to identify a range of potential social impacts identified by key stakeholders. In the context of the impact assessment process these perspectives can inform our understanding of what the social impacts of the draft zoning proposal are likely to be. This impact assessment statement helps to identify what the likely social impacts will be.

This social impact assessment provides baseline perspectives on potential positive and negative impacts across five domains:

- Education and wellbeing;
- Culture and heritage;
- Recreation and fishing;
- Population and housing; and
- Community.

Social vulnerability of the Impact Region associated with each Marine Park has been determined through a combination of Socio-Economic Indexes for Areas (SEIFA) indexes, population (health, family, education, Indigenous status) and economic characteristics (unemployment, job losses).

The SEIFA Indexes presented here provide a measure of the socio-economic disadvantage for the Impact Regions associated with Marine Parks at the time of the 2006 Census⁵. We have included figures from the Index of Relative Socio-economic Disadvantage, the Index of Economic Resources and the Index of Education and Occupation. Each of these provides a slightly different view of the socio-economic profile and potential vulnerability of each region.

SEIFA values have been standardised with Australia (as a whole) having a value of 1000 and a standard deviation of 100, low scores indicate greater disadvantage. South

⁴ The South Australian Marine Parks Information Tool (SAMPIT) is a computer tool designed to gather information from community members about their favourite fishing spots and areas they believe need protection. Data is collected and reported by 'grid cell'. SAMPIT data for 1,739 people is available including 1311 recreational fishers. Quality control by the Department of Environment and Natural Resources included cross-verification of legitimate naming and activities from the data provided (DENR 2010b).

⁵ Australian Bureau of Statistics. 2008. Census of Population and Housing: Socio-Economic Indexes for Areas (SEIFA), Australia - Data only 2006 (cat. no. 2033.0.55.001) and Information Paper: An Introduction to Socio-Economic Indexes for Areas (SEIFA), 2006 (cat. no. 2039.0). Note SEIFA Indexes for the 2011 Census are not yet available.

Australia sits below the Australian average with a relative disadvantage level of 979. At the SLA level, South Australian SEIFA relative disadvantage scores range from a low of 527 through to 1107.

A range of SEIFA values at the statistical local areas (SLA) level are associated with the Impact Regions, noting between one and seven SLAs are associated with each Impact Region. These capture information about average socio-economic conditions for the SLA and Impact Region but do not account for variation of individuals within the areas. Areas identified with relative disadvantage may well have individuals and sub-regions that are relatively advantaged. We have also presented individual variables to provide additional information about the potential social vulnerability of SLAs associated with the Impact Regions.

Where an Impact Region has an SLA falling within the top decile in South Australia (i.e. most disadvantaged) a ranking of High is provided. A ranking in the second highest decile is ranked as Moderate. Where there are moderate to high ranking SLAs they are rated to as Moderate-High.

It is important to acknowledge that the impact of marine parks on employment and wellbeing is likely to vary significantly across regions and will be mediated by a range of social and economic factors including:

- the age and retirement intentions of fishers;
- the ability of fishers to adapt to changes within the region in which they fish;
- the opportunities available to fishers and those dependent on fishers to work in other industry sectors;
- the impact of compensation packages provided to fishers on their financial circumstances and the local economy;
- the influence of lifestyle attachment and importance of place in the lives of fishers
- the extent to which the existence of marine parks might generate employment in tourism, research, education and other sectors.

3. Upper South East Marine Park Description

Overlapping the Coorong and Otway Bioregions, the Upper South East Marine Park covers 906km² and is divided into two sections: from 11 km north of Tea Tree Crossing to the Maria Creek outlet in Kingston and from Wright Bay to the northern most point of Stinky Bay. This marine park overlays Baudin Rocks Conservation Park, partially overlays the Coorong National Park and Little Dip Conservation Park and is adjacent to Guichen Bay Conservation Park (DENR 2010a).

A map of the Upper South East Marine Park and the proposed draft zoning is provided at the end of this statement at Appendix 5.

3.1 Ecological Description

Habitats in the park are influenced by the generally cool water, nutrient rich Bonney upwelling from December to May, and estuaries, creeks and drainage channels connecting the fresh and marine waters (DENR, 2010a).

The northern part of the park includes a long stretch of the Coorong coast with exposed, high energy sandy beaches backed by vast dune systems, southwards to Lacepede Bay, with dense and extensive seagrass meadows in the near shore region and reef further offshore (DENR, 2010a).

The southern part of the park is characterised by highly exposed rocky headlands, wave-cut shore platforms, fringing reefs, and extensive subtidal limestone reef formations, and there are a number of small rocky islands (Godfrey Islands) within Baudin Rocks Conservation Park. There are also dense seagrass beds mixed with sandy patches in the shallow waters along Long Beach, and dense seagrass beds around Nora Creina (DENR, 2010a).

For the current impact assessment, coastal and marine habitats/ecosystems were divided into the following types: saltmarsh, mangrove, intertidal sand flat, subtidal sand, intertidal seagrass flat, subtidal seagrass, intertidal reef, subtidal high profile reef, subtidal low profile reef, beach, and pelagic. The extent of these habitats (except pelagic) mapped for this park are shown in Table 3-1.

These eleven habitats/ecosystems, and others not considered in the current impact assessment, support thousands of species (Edyvane 1999, Baker 2004). They also offer goods and services that are of economic, social and environmental value to SA. The economic value of these services can be difficult to determine but to illustrate the importance of valuing coastal marine habitats in SA a description of the necessary goods and services that need to be taken into account is provided. The goods and services provided by coastal, marine and estuarine habitats were classified under four headings by McLeod and Leslie (2009). These headings were:

- Life supporting services,
- Resources and products,
- Maintaining Earth's living space and
- Recreational and cultural services.

Each one of these headings was divided into categories that could be more easily valued, either directly or as a service. A more detailed discussion of these goods and services is provided in Appendices 4 (habitat specific information) and 5 (consolidated discussion) of the Main Report.

Table 3-1 Summary of habitats

Zone	Shoreline habitats (km of coastline)						Benthic habitats (km ²)				
	Beach	Intertidal sand	Intertidal seagrass	Intertidal reef	Mangrove	Saltmarsh	Subtidal high profile reef	Subtidal low profile reef	Subtidal sand	Subtidal seagrass	Unmapped
SZ-1	7.4								15.1		25.3
SZ-2							20.8	0.9	0.7	9.4	14.3
SZ-3				1.5			0.4				
HPZ-1	10.8						0		21.1		38.1
HPZ-2	19.4						39.3	4.1	25.9	81.5	69.2
HPZ-3	12.8						69.9	0.1	7.3	0.6	15.2
HPZ-4	6			2.2			10.6	9	1.5		17.5
GMUZ-1	46.7						1.2		73.4	9.7	181.2
GMUZ-2	22.2			5.7			47.2	10.6	13.8	0.1	71.2
Total	125.2			9.5			189.6	24.7	158.8	101.3	432.0

Source: based on GIS data provided by DEWNR.

Zones are labelled as shown in Appendix Figure 5–1.

Intertidal habitats are expressed as shoreline lengths to be consistent with DENR (2010a), and/or because of limitations of the available GIS data, and therefore do not provide a complete indication of the extent of these habitats within the park.

The zero value indicates presence but <0.05 km². Totals may differ slightly from column sums due to rounding.

3.2 Socio-economic Profile

The socio-economic profile provided in Appendix 1 presents a statistical summary of key economic and social information for the Upper South East region and, where possible, South Australia (SA). The profile brings together a wide range of existing Australian Bureau of Statistics (ABS) data and some non-ABS data. It has been designed, at a broad level, to aid understanding of the economic and social structure of the region, to indicate how the Upper South East region contributes to the State economy and to illustrate trends in economic growth or decline.

The Upper South East region is located south-east of Adelaide (Figure 1, Appendix 1). The two statistical local areas (SLAs) that comprise the region are Kingston (DC) and Robe (DC). The Upper South East regional economy is relevant to the Upper South East Marine Park (MP18). Table 3-2 presents a summary of the key economic and social information detailed further in Appendix 1.

Some key points from the detailed socio-economic profile in Appendix 1 are as follows:

- The estimated resident population of the Upper South East region was almost 4,000 persons in 2010/11.

- Compared with the age distribution of the state as a whole, the Upper South East region has a smaller concentration of younger people (aged 0 to 14 years) and of persons aged 15 to 64 years and, consequently, a higher share of people aged 65 and over.
- The total population in the Upper South East region is projected to increase by approximately 5 per cent by 2026, whereas the SA population is expected to increase by around 23 per cent.
- The unemployment rate in the Upper South East region was 3.3 per cent in the June quarter of 2011, below the state as a whole.
- Of the businesses operating in the Upper South East region, approximately 50 per cent were classified in the agriculture, forestry and fishing sector and 10 per cent were in the construction sector.
- Over the period 2000/01 to 2009/10, the mean taxable income (in nominal terms) increased by 49 per cent in the Upper South East region (\$48,200 in 2009/10) and 54 per cent in SA as a whole (\$54,350 in 2009/10).
- Median dwelling (units and houses) prices increased by 233 per cent in the Upper South East region (\$285,000 in 2010/11) and 197 per cent in SA as a whole (\$357,500 in 2010/11) over the period 2000/01 to 2010/11.
- In 2009/10, the top four contributors to total jobs in the region were the agriculture, forestry and fishing (32 per cent), accommodation, cafes and restaurants (14 per cent), retail trade (13 per cent each) and health and community services (7 per cent) sectors.
- In 2009/10, the top contributors to GRP were the agriculture, forestry and fishing (34 per cent), ownership of dwellings (10 per cent) and manufacturing, accommodation, cafes and restaurants and building and construction (7 per cent each) sectors.
- The commercial fishing and tourism industries are important to the local economy in terms of contributing to jobs and GRP. Directly and indirectly commercial fishing and aquaculture contributed 3 per cent of GRP (\$4.1 million) and 4 per cent of employment (59 fte jobs) in 2009/10. By comparison, the tourism sector contributed 8 per cent of GRP (\$11.1 million) and 12 per cent of employment (200 fte jobs).

Table 3-2 Summary of key economic and social indicators for the Upper South East region

Indicator	Upper South East	SA	Upper South East as a proportion of SA
Population, 2010/11 (no.)	3,982	1,656,299	0.2%
Birth Rate, 2009/10 (births/1000 residents)	8.8	12.2	-
Death Rate, 2009/10 (deaths/1000 residents)	4.8	7.9	-
Age Distribution, 2009/10:			
Proportion of Population aged 0-14	16%	18%	-
Proportion of Population aged 15-64	64%	67%	-
Proportion of Population aged 65+	21%	16%	-
Dependency Rate, 2009/10:			
Child	26%	27%	-
Aged	32%	23%	-
Total	57%	50%	-
Population Projection, Increase from 2006 to 2026	5%	23%	-
Employment, June qtr 2011:			
Labour Force (no.)	2,211	867,500	0.3%
Unemployed (no.)	73	45,300	0.2%
Unemployment Rate	3%	5%	-
Participation Rate, 2009/10	65%	63%	-
Businesses, June 2009 (no.)	587	141,625	0.4%
School Enrollments, 2011	511	247,356	0.2%
Tertiary Enrollments, 2011	324	208,706	0.2%
Non-school Qualifications, 2006	1,100	595,379	0.2%
Mean Taxable Income, 2009/10 (\$)	48,217	54,349	-
Proportion of Taxable Individuals, 2009/10	67%	74%	-
Value per Buiding Approval, 2010/11 (\$)	269,842	236,269	-
Median Dwelling Price, 2010/11 (\$)	285,000	357,500	-
Commercial Fishing, Ave/yr 2000/01 to 2009/10:			
Catch (t)	153	47,581	0.3%
Value of Catch (\$m)	5	202	2.6%
Charter Boats, Ave/yr 2007/08 to 2009/10 (no. of fish)	n/a	146,341	-
Recreational Fishing, 2007/08:			
Fishers (no.)	9,759	236,463	4.1%
Days Fished (no.)	35,866	1,054,200	3.4%
Gross Regional Product, 2009/10 (\$m)	146	80,356	0.2%
Employment, 2009/10 (fte)	1,699	774,953	0.2%
Tourism, 2009/10 (\$m)	29	4,524	0.6%
Other Regional Exports, 2009/10 (\$m)	105	26,757	0.4%
Regional Imports, 2009/10 (\$m)	163	40,573	0.4%

4. Summary of Impacts

4.1 Ecological

This section presents the summarised results of the ecological impact assessment for this particular park. As such, output tables and other information presented that are not otherwise referenced, represent the professional judgement of the authors. Full details behind the assessments can be found in the Main Report and accompanying appendices (see cross-references below).

4.1.1 Habitats

In general the habitats within the park are considered to be in a condition comparable to the time of European settlement. Much of GMUZ-2 is adjacent to the Little Dip Conservation Park, and SZ-1, HPZ-1 and much of GMUZ-1 are adjacent to the Coorong National Park. These areas adjacent to parks are therefore unlikely to be subjected to land-based threats. Elsewhere, there are a number of potential, but minor, land-based threats to water quality (elevated nutrient levels) from: possible septic tank seepage at the townships of Boatswains Point (HPZ-3), and Nora Creina (HPZ-4); and agricultural run-off via Blackford and Kingston Main Drains (HPZ-2) (Bryars, 2003). Localised impacts on seagrass beds have been found adjacent to Blackford and Kingston Main Drains (Maria Creek) (Wear et al., 2007). A further potential threat to water quality is increased turbidity and sedimentation caused by intermittent dredging operations at Lake Butler boat haven in Robe (GMUZ-2, near SZ-3) (Bryars, 2003). The Cape Jaffa township and fish processing facilities are outside the park, at least 10 km from both the northern and southern sections of the park, and finfish aquaculture near Cape Jaffa is also outside the park. There is an aquaculture zone overlapping HPZ-2 and SZ-2, but there are currently no leases within it.

The proposed zoning alone does not address the potential water quality issues listed above, which would require complementary management measures. However, the zoning plan will influence future activity in all zones and applies specific restrictions on future activity within HPZs, SZs and RAZs, with respectively increasing protection across this hierarchy of zone types (see Appendix 1.2.6 of the Main Report). The Upper South East Marine Park has about 45 per cent and 10 per cent of the total park area designated as HPZ and SZ, respectively.

A special purpose area (harbor activities) has been proposed for Guichen Bay, overlapping most of HPZ-3. An activity for the purposes of maintaining or improving a harbor or port (see Appendix 7 of the Main Report) that would normally be restricted within this zone may be able to occur subject to the provisions of the management plan. As the management plans were not available for this report, it is not possible to assess the extent to which habitats would be protected. It is nevertheless expected that the designation of an area worthy of zoning as an HPZ would assist in directing future activities appropriately.

The Government has proposed that aquaculture developments within HPZs would generally be managed under the *Aquaculture Act 2001* to ensure that all reasonable and practicable measures are taken to achieve the definition of the zone (i.e. no harm to habitats or the functioning of ecosystems), and is deemed inconsistent with the definition of an SZ (see Appendix 7 of the Main Report). However, a special purpose area (aquaculture) has been proposed to overlap SZ-2 and HPZ-2, which reduces the

level of protection for SZ-2 and would potentially also reduce the level of protection provided by HPZ-2.

For the Upper South East Marine Park, habitats of particular conservation value include (DENR, 2010a):

- The Coorong coast (SZ-1, HPZ-1), which is the largest high energy dissipative beach in the southern hemisphere. Part of this coastline is within GMUZ-1 and therefore less protected.
- Seagrass and macroalgae beach wrack at Kingston (HPZ-2) and Stinky Bay (HPZ-4), which is important for nutrient cycling and food webs.
- Reefs in Guichen Bay (HPZ-3, SZ-3) and Nora Creina (HPZ-4) provide habitat for various attached and mobile invertebrates and a high diversity of macroalgae, including species with limited range. Reefs in Guichen Bay within GMUZ-2 do not have the same level of protection.

4.1.2 Species

4.1.2.1 Threatened and protected species

A large number of marine species are protected in SA under either State and/or Federal legislation, including all syngnathids (seahorses, seadragons, pipefishes, pipehorses), all marine mammals and most seabirds. Some of these species are also listed as threatened species under either State and/or Federal legislation. It was beyond the scope of this impact statement to assess all of these species, but some of the species or species groups that were identified in the Ecosystem Food Webs (see Appendix 6 of the Main Report) and/or that are a key feature of this particular marine park are considered here. Each of these species is discussed in more detail in Appendix 3 of the Main Report.

The following species may benefit from maintenance and/or improvement of habitats and ecological processes within the park:

- Australian sea lion (threatened and protected species)
- Little penguin (protected species)
- New Zealand fur seal (protected species) (breeding site at Baudin Rocks)
- White shark (threatened and protected species)
- Syngnathids including the leafy and weedy seadragon (protected species)
- Bottlenose and common dolphins (protected species).

Changes in abundance of these species due to the introduction of the proposed management arrangements are not able to be predicted over the next 20 years due to the complexities of ecosystem interactions and/or a lack of data on current status and zone use. Listed threatened species often have individual recovery plans that identify objectives/actions required to mitigate against threatening processes that will ultimately allow recovery of the species. Protection of critical habitat is often identified in these plans as a useful objective, and thus the protection of breeding and aggregation areas should have some positive impact on the Australian sea lion, southern right whale, and white shark. However, the Australian sea lion is an infrequent visitor to the park and does not have breeding colonies or key foraging grounds within the park, and the park

is not known as a white shark aggregation area. Thus it is unlikely that the main anthropogenic threatening processes to the Australian sea lion and white shark will be out-weighed by any potential positive impact from the park zoning and management plan (see Species Profiles in Appendix 3 of the Main Report).

4.1.2.2 Fished species

South Australia's proposed system of marine parks was designed for biodiversity conservation purposes rather than as a fisheries management tool. Nevertheless, the impact assessment identified that species which are currently fished are most likely to show a direct first-order response over the next 20 years (relative to current uses) to the proposed management arrangements and zonings (see Appendix 1.3 of the Main Report). Therefore the assessment of the impact on 20 indicator fished species has been provided in a specific section here. More detailed discussion on the rationale for selecting the indicator species, and their expected response to protection, can be found in Appendices 1.3.4 and 3 of the Main Report.

Commercial, recreational and charter fishing occurs within the park for a variety of species. The current status of some of the indicator species that were able to be assessed within various sanctuary zones of the park was considered to be at an unnaturally low level (UNLL) compared with a pre-European (pre-fishing) baseline (Table 4-1). A pre-fishing baseline rather than the current baseline is required to enable future predictions of change because the level of fishing activity prior to protection influences the response following protection (see Appendix 1 of the Main Report). The reduced levels of some species do not reflect poorly on fisheries management in accordance with the principles of ecologically sustainable development.

Predicting ecological responses to marine parks is inherently complex and depends on many factors (see Appendix 1.3.7 in the Main Report). In the few instances where it has been attempted, the actual changes have often been different to the predictions (Langlois and Ballantine, 2005). Nevertheless, as required for this assessment, some predictions have been attempted based on a number of assumptions listed in Appendix 1.3.13 of the Main Report. Each species is considered only in isolation and therefore interactions between species also need to be considered when interpreting the potential responses described below (see Section 4.1.3).

Table 4-1 summarises the outcomes of the predictive modelling that was undertaken on a subset of indicator species (see Appendix 1.3 of the Main Report for further details of the methodology, in particular the list of assumptions and limitations in Appendix 1.3.13). Using southern rock lobster as an example, Table 4-1 indicates that the current status of adult southern rock lobster is at an UNLL in sanctuary zones SZ-1, SZ-2 and SZ-3, which include reef habitat used by lobster. Under the proposed zoning, the adults and sub-adults already resident in these proposed sanctuary zones and any post-larval juveniles that then become residents (or recruits) would be protected. Consequently, the potential exists for the size and abundance of adults to increase within these zones after 5 years (shown as +), 10 years (shown as ++) and 20 years (shown as +++) (Table 4-1). Without the proposed zoning, adult lobsters would continue to be harvested and the population level was assumed to remain as it is today, as indicated by the zeros at 5, 10 and 20 years. Thus the predicted net effect of the proposed zoning shown in Table 4-1 is a positive increase within these zones across 5, 10 and 20 years⁶. Table 4-1 also shows for southern rock lobster that there is potential for: a

⁶ Current management arrangements are aiming for a recovery of lobster populations in the Northern and Southern Zones. Nonetheless, the increase inside SZs would still be expected to be greater than outside, but the net effect of the SZs would be lowered.

spill-over as a result of the population density inside the SZs increasing relative to outside to the point where some lobsters will tend to migrate from the SZ; and increased larval production from inside the SZs due to increased lobster abundance and increased spawning. A similar scenario to southern rock lobster is also predicted for blacklip abalone in SZ-3 (Table 4-1), except that spill-over is unlikely to occur because blacklip abalone are highly sedentary (see Species Profile in Appendix 3 of the Main Report). In addition, second-order ecosystem interactions between blacklip abalone and higher order predators may limit their potential to increase (see Section 4.1.3). Density-dependent factors may also ultimately limit any potential increases in the size and abundance of sedentary species such as abalone that may have limited capacity to move out of an area (see Species Profiles in Appendix 3 of the Main Report).

Similar predictions to southern rock lobster are also made for snapper, with an increase in size and abundance across 20 years predicted in sanctuary zones SZ-1, SZ-2 and SZ-3, which all include reef/sand habitat used by snapper (Table 4-1). Snapper populations often comprise a mix of migrant and resident individuals and there is evidence that some individuals become resident in the upper South East (see Species Profile in Appendix 3 of the Main Report); it is these fish that are predicted to increase in abundance over time in the absence of fishing activity. However, due to the very small size of SZ-3 there are likely to be strong boundary effects of fishing on more mobile species such as snapper (as opposed to abalone). Goolwa cockle is predicted to increase in size and abundance inside SZ-1 (Table 4-1). For resident reef fishes which are vulnerable to localized depletion (bluethroat wrasse and sea sweep) and which are currently considered to be at UNLL in SZ-3, there is potential that across 20 years their populations may decline further without zoning (as indicated by a – at 20 years), but that they would increase in size and abundance across the 20 year period with the proposed zoning; thus yielding a net positive benefit at 20 years of ++++ (Table 4–1).

Of the other indicator species assessed (and which are not presented in Table 4–1), the following observations were made for the Upper South East Marine Park:

- Species occurring within the park but with insufficient information to enable an assessment include: Bight redfish, King George whiting, southern garfish, swallowtail, western blue groper, harlequin fish and southern calamary.
- Species considered as not occurring within the park include: yellowfin whiting, blue swimmer crab, western king prawn, razorfish and mud cockle.

In addition to the species that were able to be assessed, there are numerous other species (target, byproduct, bycatch) that may also respond to or benefit from the cessation of fishing within SZs (see Appendix 1.3.4 of the Main Report), and which may be found in the relevant park zones (Table 4-2). By preventing fishing, a range of benefits for species may be realised including (but not limited to): elimination of direct fishing mortality and post-release mortality; more natural age, size structure and sex ratio of populations, age and size at maturity and fish behaviour; and reduced incidence of disease (see Section 6.1.1 and Appendix 1 of the Main Report for further discussion and references). Each of the species listed in Table 4-2 has a known direct interaction with fishing (see Appendix 2 of the Main Report) which justifies their inclusion here. While the impact of the interaction is largely unknown for most species, the point is that the interaction will be removed through zoning, providing a positive benefit to those species. For example, the southern blue devil is a long-lived (Saunders et al., 2010), site-attached reef fish (Bryars, 2010) that is incidentally caught as bycatch

(e.g. Fowler et al., 2009) but which is susceptible to barotrauma (Saunders et al., 2010) and therefore may have a low rate of post-release survival. The southern blue devil will therefore benefit from protection inside SZs.

Table 4-2 includes some of the more mobile finfish species which may not respond directly to zoning but may potentially increase in abundance within the park because of the proposed overall reduction of commercial and charter fishing effort, as per the PIRSA (2011) policy position. While it was assumed that the removal of this effort would minimise negative impacts on areas outside SZs, there is potential for the abundance of some fished species to decline outside SZs through displacement of recreational fishing effort, possibly offset to some extent by spill-over (see Appendix 1.3.12 of the Main Report). However, it should be reiterated (see Appendices 1.1.2 and 1.3.13 of the Main Report) that the assessment of the proposed management arrangements does not take into account possible alternative management responses over the next 20 years within the existing management framework.

Of the three proposed SZs within the park, all of them show potential for measurable responses for some of the indicator fished species, as well as some other species not formally assessed (see Tables 4–1 and 4–2, and Case Study in 4.1.4). Two of the zones (SZ-1 and SZ-2) are relatively large and thus the protection of some species and the buffering effect from activities at the boundaries will be significant. The third zone (SZ-3) is relatively small, but despite the increased likelihood of boundary effects, it may still show responses of some of the more sedentary fished species such as blacklip abalone (see Case Study in 4.1.4).

In addition to possible responses to protection from fishing, many of the fished species will gain long-term positive benefits from protection of the habitats that they rely upon for various stages of their life cycles. These benefits will often be manifested both inside and outside the park boundaries. For the Upper South East Marine Park, protection of habitats is critical for the long-term sustainability of sedentary species such as southern rock lobster and abalone which use the same reef habitat for the adult, post-larval and juvenile stages of their life cycles (Bryars, 2003).

Table 4-1 Potential first-order responses of some indicator species^a

Species	Life stages	Sanctuary Zones	Habitat usage	Zone visitation	Recruitment to zone	Recruitment source	Current status	Potential first order responses to zoning at 5, 10 and 20 years						Notes	
								Measure	Scenario	5	10	20	Spill over		
Snapper	Adult	1, 2, 3	Reef, Sand	Resident & Temporary resident	Yes (adults)	Gulf St Vincent, Victoria	UNLL	Size	With Zoning	+	++	+++			Resident fish in the population have potential to increase in size and abundance inside SZs
							UNLL	Abundance	With Zoning	+	++	+++			
							UNLL	Size	Without Zoning	0	0	0			Assumes stocks will remain at current levels under current fisheries management
							UNLL	Abundance	Without Zoning	0	0	0			
							UNLL	Size	Net effect of Zoning	+	++	+++	✓	✖	No larval export as spawning may not occur in this region. Net effect may not be realised inside SZ-3 due to its very small size.
							UNLL	Abundance	Net effect of Zoning	+	++	+++			
Southern rock lobster	Adult, sub-adult	1, 2, 3	Reef	Resident	Yes (post-larvae)	South Australia, Victoria	UNLL	Size	With Zoning	+	++	+++			
							UNLL	Abundance	With Zoning	+	++	+++			
							UNLL	Size	Without Zoning	0	0	0			Assumes stocks will remain at current levels under current fisheries management
							UNLL	Abundance	Without Zoning	0	0	0			
							UNLL	Size	Net effect of Zoning	+	++	+++	✓	✓	Net effect will be lowered if current management arrangements aimed at long-term recovery of lobster stocks are realised
							UNLL	Abundance	Net effect of Zoning	+	++	+++			
Blacklip abalone	Adult, sub-adult	3	Reef	Resident	Yes (post-larvae)	Local	UNLL	Size	With Zoning	+	++	+++			
							UNLL	Abundance	With Zoning	+	++	+++			
							UNLL	Size	Without Zoning	0	0	0			Assumes stocks will remain at current levels under current fisheries management
							UNLL	Abundance	Without Zoning	0	0	0			
							UNLL	Size	Net effect of Zoning	+	++	+++	✖	✓	Predictions for blacklip abalone may be lowered by negative second order ecosystem interactions with predators such as southern rock lobster
							UNLL	Abundance	Net effect of Zoning	+	++	+++			
Goolwa cockle	Adult, sub-adult	1	Sand	Resident	Yes (post-larvae)	Local	UNLL	Size	With Zoning	+	+	+			
							UNLL	Abundance	With Zoning	+	++	+++			
							UNLL	Size	Without Zoning	0	0	0			Assumes stocks will remain at current levels under current fisheries management
							UNLL	Abundance	Without Zoning	0	0	0			
							UNLL	Size	Net effect of Zoning	+	+	+	✓	✓	Adults can be moved along beaches by currents so possibility of spillover
							UNLL	Abundance	Net effect of Zoning	+	++	+++			
Sea sweep, Bluethroat wrasse	Adult, sub-adult	3	Reef	Resident	Yes (sub-adults)	Unknown	UNLL	Size	With Zoning	+	++	+++			
							UNLL	Abundance	With Zoning	+	++	+++			
							UNLL	Size	Without Zoning	0	0	-			Species are highly vulnerable to fishing/serial depletion of reefs. No regulations on take of bluethroat wrasse.
							UNLL	Abundance	Without Zoning	0	0	-			
							UNLL	Size	Net effect of Zoning	+	++	++++	✓	✓	Larval export may not occur for sea sweep as spawning locations are unknown.
							UNLL	Abundance	Net effect of Zoning	+	++	++++			

^a This table must be read in conjunction with the methods and assumptions detailed in Appendix 1.3 of the Main Report.

Labels in 'Sanctuary Zone' column refer to Appendix Figure 5–1, and are for SZs unless otherwise specified.

Life history information with supporting references is detailed in Appendix 3 of the Main Report.

Current status: UNLL = unnaturally low level compared to pre-fishing; NL = natural level compared to pre-fishing. A pre-fishing baseline was required to enable future predictions of change. A current status of UNLL does not necessarily imply that fisheries exploitation of the species is unsustainable.

The + and – symbols do not indicate the magnitude of a change, but are intended to be indicative of the trend over time. The potential responses do not take into account predator/prey interactions that are discussed in Section 4.1.3 below.

Western blue groper is assessed here, rather than in Section 4.1.2.1, as it is fully protected in only part of its range in SA.

Table 4-2 Other species which may respond to or benefit from protection

Common name	Species name
Black cowry	<i>Zoila friendii thersites</i>
Blue morwong	<i>Nemadactylus valenciennesi</i>
Bronze whaler	<i>Carcharhinus brachyurus</i>
Cobbler	<i>Gymnapistes marmoratus</i>
Dusky morwong	<i>Dactylophora nigricans</i>
Dusky whaler	<i>Carcharhinus obscurus</i>
Eagle ray	<i>Myliobatis australis</i>
Giant cuttlefish	<i>Sepia apama</i>
Gummy shark	<i>Mustelus antarcticus</i>
Horseshoe leatherjacket	<i>Meuschenia hippocrepis</i>
King George whiting	<i>Sillaginodes punctata</i>
King scallop	<i>Pecten fumatus</i>
Longsnout boarfish	<i>Pentaceropsis recurvirostris</i>
Magpie perch	<i>Cheilodactylus nigripes</i>
Maori octopus	<i>Octopus maorum</i>
Moonlighter	<i>Tilodon sexfasciatus</i>
Mulloway	<i>Argyrosomus japonicus</i>
Polychaete worms	Polychaete worms
Purple urchin	<i>Heliocidaris erythrogramma</i>
Queen scallop	<i>Equichlamys bifrons</i>
Rock ling	<i>Genypterus tigerinus</i>
Sand crab	<i>Ovalipes australiensis</i>
Sand flathead	<i>Platycephalus bassensis</i>
School whiting	<i>Sillago bassensis</i>
Silver drummer	<i>Kyphosus sydneyanus</i>
Silver trevally	<i>Pseudocaranx georgianus</i>
Southern blue devil	<i>Paraplesiops meleagris</i>
Southern calamary	<i>Sepioteuthis australis</i>
Southern fiddler ray	<i>Trygonorrhina dumerilii</i>
Southern garfish	<i>Hyporhamphus melanochir</i>
Spider crab	<i>Leptomithrax gaimardii</i>
Spotted wobbegong	<i>Orectolobus maculatus</i>
Yelloweye mullet	<i>Aldrichetta forsteri</i>
Zebrafish	<i>Girella zebra</i>

4.1.2.3 Other species

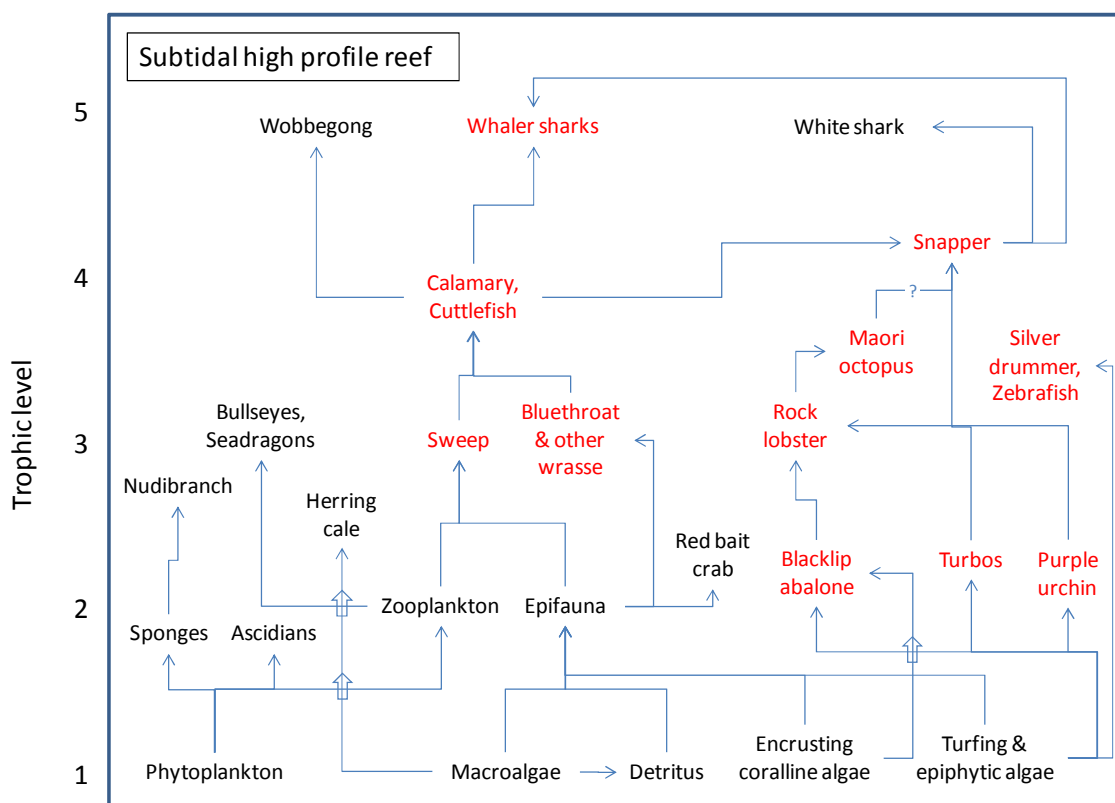

There are numerous species that are neither listed as protected/threatened nor fished but which may also benefit from maintenance and/or improvement of habitats and ecological processes in the park. Representatives of such species (see Appendix 2 of the Main Report) in the Upper South East Marine Park include: herring cale (*Olisthops cyanomelas*), long-finned goby (*Favonigobius lateralis*), common bullseye (*Pempheris multiradiata*), Wood's siphonfish (*Siphamia cephalotes*), winkles (*Austrocochlea* spp.), brittlestars, featherstar (*Cenolia trichoptera*), eleven-armed seastar (*Coscinasterias muricata*), short-tail nudibranch (*Ceratosoma brevicaudata*), cartrut shell (*Dicathais orbita*), Roe's abalone (*Haliotis roei*), blue-ringed octopus (*Hapalochlaena maculosa*),

Lepsiella vinosa, isopods, western black crow (*Nerita atramentosa*), reef crab (*Ozius truncatus*), *Paphies elongata*, *Phasianotrochus eximius*, *Phasianotrochus irisodontes*, red bait crab (*Plagusia chabrus*), gorgonian fan coral (*Mopsella klunzingeri*), green coral (*Plesiastrea versipora*), tulip shell (*Pleuroploca australasia*), sea tulips (*Pyura* spp.), *Thalotia conica*, canopy-forming macroalgae (*Macrocystis*, *Ecklonia radiata*, *Cystophora* spp., *Sargassum* spp. and *Scaberia agardhi*), and meadow-forming seagrasses (*Posidonia* spp., *Amphibolis* spp.).

4.1.3 Ecosystems

The current state of the ecosystems in the park generally reflects the condition of the component habitats and species documented above. Similarly, responses of the ecosystem to the proposed management changes are informed by the predictions for habitats and species above. The proposed management changes also provide for the restoration of more natural predator-prey relationships (among other interactions) for the more resident species within SZs of an appropriate size. This may result in increased abundances of some species, but decreases for others. In particular, it can be expected that there will be a response of reef ecosystems with interactions between lobster, blacklip abalone and urchins, and potentially snapper and octopus (see Figure 4–1). Most notably, changes might be expected in the reef ecosystems of SZ-1, SZ-2 and SZ-3 where first-order fished species changes have been predicted to occur (see Section 4.1.2.2 earlier). However, the small size of SZ-3 may result in a reduced response as a result of fishing at the boundary (see Appendix 1.4.4 of the Main Report and the case study in Section 4.1.4 below).

Figure 4–1 Simplified conceptual food web for subtidal high profile reef

Note: showing links between a variety of species across all trophic levels and indicating those species that interact with fishing (highlighted in red). See Appendix 6 of the Main Report for further details about the food web.

Natural food webs cannot be fully restored, due to the scales over which the more mobile higher- and middle-order fished species range. However, some increase in abundance of such species is expected as a result of the proposed overall reduction of fishing effort in the marine scalefish and charter fisheries, as per the PIRSA (2011) policy position, and there may be localised flow-on effects for food webs inside the marine parks.

It is also apparent from the simplified food webs (see Figure 4–1 and Appendix 6 of Main Report) that many fished species (shown in red text) and non-fished species are ultimately reliant upon the maintenance of habitat-forming species (such as macroalgae and seagrasses) which lie at or near the base of the food webs, and it is these very habitats that will receive a high level of protection within the marine parks network. Thus the marine parks network will have a positive long-term impact on ecosystems regardless of whether there are zone-specific responses following implementation of the management plans.

4.1.4 Case study - Potential benefits of a small sanctuary zone off Robe

The Upper South East Marine Park contains a wide range of habitat types, including an extensive amount of subtidal high profile reef which supports a vast array of species including the locally iconic southern rock lobster and blacklip abalone (see Figure 4–1). In the vicinity of Robe there are two proposed habitat protection zones: HPZ-3 and HPZ-4. These HPZs are important as they will help to protect the reef habitat from potential future harmful uses. Of greater importance for biodiversity conservation purposes are sanctuary zones. However, only one small sanctuary zone has been proposed near Robe, in the Cape Dombey area (SZ-3). Nonetheless, while SZ-3 is small, it covers an area of subtidal high profile reef in which it is expected that there will be significant changes to species (and possibly ecosystems), with consequent benefits for biodiversity conservation.

The region around Robe is fished by commercial lobster and abalone fishers. Recreational fishing from both boat and shore also occurs for rock lobster and abalone, as well as reef fishes such as snapper, bluethroat wrasse, and sea sweep. Charter boat fishing also occurs for these (and other) fishes. Due to the effects of fishing, rock lobster, blacklip abalone, snapper, bluethroat wrasse, and sea sweep populations inside SZ-3 are currently below levels that would occur without fishing (see Section 4.1.2.2). This fact is not a poor reflection of fisheries management but rather is a consequence of fisheries which by their very nature keep population levels below what would occur without fishing (Haddon, 2007). The proximity to Robe also results in a relatively high level of localised fishing activity in the Cape Dombey area. However, in the absence of fishing inside SZ-3 it is possible that all of the species highlighted will show a positive initial response with an increase in size and abundance (see Section 4.1.2.2).

Evidence from studies in Tasmania and New Zealand has shown that southern rock lobster can respond to protection from fishing inside relatively small (1–2 km coast length) sanctuary zones (Edgar et al., 2009), in which they grow larger and become more abundant (see Appendix 1.4.4 of the Main Report), but possibly not in reserves as small as 1 km coast length) (Barrett et al., 2009). For species such as blacklip abalone that are very sedentary, it is likely that they will initially grow larger and also become more abundant without fishing activity. Bluethroat wrasse are site-attached with small home ranges and in some cases benefit from protection even inside small sanctuary zones (Barrett et al., 2007; see Appendix 1.4.4 of the Main Report). There is also evidence that sea sweep are site-attached (see Species Profile in Appendix 3 of

the Main Report) and that even snapper can become resident with no-take marine reserves in New Zealand where they have seen rapid increases in snapper abundance following protection (Denny et al., 2004).

Tagging of snapper in South Australia indicates that populations are comprised of both resident and migrant fish (Fowler, 2008). At this stage, research has not been conducted to determine the home ranges of resident snapper in South Australia, but long-term acoustic tagging of snapper in New Zealand (same species as South Australia) has shown that some members of the populations on reef systems are residents with relatively small home ranges of $<1 \text{ km}^2$ (Parsons et al., 2003, 2010). Parsons et al., (2010) also found that fish behaved differently inside versus outside SZs and that this was due to the SZ restrictions. The New Zealand studies indicated that relatively small SZs can provide total protection from fishing for some resident fish. Thus for locations in South Australia where adult snapper move into and then become resident, SZs in those locations could potentially accumulate fish over time. If this occurred inside SZ-3 then it would have an influence not only on the snapper population but also on the ecosystem inside the zone.

While single species responses will probably occur inside SZ-3, ecosystem interactions are also likely to occur and this may influence the response of prey species such as blacklip abalone (see Figure 4–1). Monitoring programs in no-take marine sanctuaries in Tasmania and New Zealand (where similar reef species occur) have shown that predator-prey interactions can influence the abundance of species and that those changes can take many years to occur (see Appendix 1.4.4 of the Main Report). All of the predictions for SZ-3 are of course reliant on the absence of illegal fishing. In addition, the small size of SZ-3 and its connectivity with reef that can be fished may result in a reduced response due to migration of individuals to and across the zone boundary. Nonetheless, because of the potential for some change to occur and because the sanctuary zone is located adjacent to a major regional centre (Robe), SZ-3 is likely to be of special significance for biodiversity conservation, research, and education within the Upper South East Marine Park.

4.2 Economic

4.2.1 Commercial Fishing

The analysis of the impact of displaced catch and/or effort on commercial fishing is based on:

- Estimates of displaced catch and/or effort provided by the South Australian Research and Development Institute (Ward and Burch 2012).
- PIRSA Fisheries and Aquaculture policy position on redistribution of displaced commercial fishing, which states that the displaced catch for sardines can be redistributed, for prawns can be redistributed up to 2 per cent of total fishery catch, and for other fisheries cannot be redistributed (PIRSA 2011). For fisheries where displaced catch cannot be redistributed it is assumed that the displaced effort will be removed from the fishery.

For some fisheries, the relevant fishing industry association has undertaken their own assessment of displaced catch/effort. The methods and data used to make these industry assessments will be reviewed by SARDI (DEWNR pers. comm., 6 July 2012). Analysis of the impact of displaced catch/effort on commercial fishing based on these industry estimates has been included in the following sections.

4.2.1.1 Summary

The estimated economic impacts on commercial fisheries, based on SARDI's average annual catches and corresponding average annual prices, are relatively small for the Upper South East Marine Park (see Table 4-3). However, the estimates of historical catches in sanctuary zones have a high level of uncertainty because of the limited spatially-resolved data available for the rock lobster fishery (Ward and Burch 2012). Industry-derived estimates of displaced catch (which have not yet been reviewed by SARDI) are less than the SARDI estimates.

The State Government has committed to buy out licences and quota entitlements of displaced effort and catch, although details of the buyout are yet to be finalised. Compensation payments have the potential to offset the negative impact of the displaced catch reported in Table 4-3. However, if compensation is limited to the buyout of displaced fishing entitlements, the negative impacts on the local economy are unlikely to be fully offset:

- There would be no requirement for the recipients of the buyout to spend or invest the funds in the region.
- Even if all the funds were invested in full in the region it is unlikely the investment would generate economic activity and wealth equivalent to that generated by the displaced fishing activity. This is because fishers have the opportunity to sell their licences at any time (they are fully transferable) but choose not to. If there were alternative investment opportunities locally that fishers had the skill and risk bearing capacity to undertake, then it is reasonable to assume that they would already be doing it.

For entitlement holders there are potentially direct financial losses suffered as a direct consequence of the cancellation of their entitlement. These could take the form of:

- a pecuniary loss such as removal and re-establishment costs or legal costs in acquiring a replacement licence/entitlements
- a capital loss of business operation - the loss of a partial entitlement or the location of sanctuary zones may negatively impact the efficiency of business operations, which might in turn impact on the market value of plant and equipment, as well as the market value of remaining fishing entitlements held by the licence holder.

4.2.1.2 Sardines

SARDI estimates of historical catch in draft sanctuary zones indicate that there would be nil catch displaced from this marine park.

4.2.1.3 Abalone

SARDI estimates indicate that historically there has been minimal catch of abalone in the draft sanctuary zones in this marine park, i.e. an average annual catch of less than 10 kg of greenlip and blacklip combined.

4.2.1.4 Rock Lobster

SARDI estimates indicate that historically there has been an average annual catch of 1,174 kg of rock lobster in the draft sanctuary zones in this marine park. This

represents 0.07 per cent of the Southern Zone Rock Lobster Fishery average annual catch or 1.35 per cent of the average annual catch in the Upper South East region.

The value of output lost directly in the region by Southern Zone Rock Lobster fishing enterprises was estimated to be \$0.07m and a further \$0.01m was estimated to be lost to associated downstream activities (processing, transport and retail/food services). Flow-on output lost to other sectors of the regional economy was estimated to be \$0.03m. The total loss in output in region (direct plus indirect) was estimated to be \$0.11m (Table 4-3). Because the reduced access to the fishery will be permanent, the impacts reported in Table 4-3 are an estimate of the on-going, annual impact.

Table 4-3 Regional economic impact of marine park zoning on the Southern Zone Rock Lobster fishery based on SARDI estimates of displaced effort

Source: EconSearch analysis

The loss in direct employment in the Southern Zone Rock Lobster fishery in the region was estimated to be less than 1 fte job, while downstream activities were estimated to lose less than 1 fte job. Flow-on business activity was estimated to lose less than 1 fte job, while the total loss in employment is to be less than 1 fte job.

Contribution to GRP is measured as value of output less the cost of goods and services (including imports) used in producing the output. The loss in total Southern Zone Rock Lobster fishing industry related contribution to GRP in the region is \$0.08m, \$0.06m lost by fishing directly, 0.0 in downstream activity and \$0.02m lost in other sectors of the regional economy.

The economic impact on rock lobster fishers may be higher than the proportion of the catch that will be lost because the small, red lobsters typically taken in State waters (where sanctuary zones are located) are more valuable (reportedly an extra \$10 per kg) than the larger, paler lobsters typically taken in Commonwealth waters (PIRSA, pers. comm. 29 September 2011). With the total allowable commercial catch at a historically low level, most licence holders in the fishery have targeted these high value rock lobsters to maximise the value of their catch. For this reason, if average trip length increases, costs will rise which is likely to lead to a reduction in profits, which will further diminish the value for licences, pots and quota.

The potential cumulative impact of the proposed extension to and revised zoning of the Commonwealth Great Australian Marine Park and the proposed Western Eyre Commonwealth Marine Reserve may place further pressure on fishing business viability.

Since there has already been substantial consolidation occurring in the fishery, with the total allowable commercial catch presently at 1250 tonnes, the introduction of sanctuary zones is likely to add further strain to many of the remaining licence holders.

The estimates of reduced regional economic activity, while relatively small, are likely to persist into the future, i.e. over next 20 years, as the reduced access to the resource will be permanent given the current fully exploited status of the fishery.

As with abalone catch, estimates of historical rock lobster catches in the sanctuary zones have a high level of uncertainty because of the limited spatially-resolved data available for the fishery (Ward and Burch 2012). For instance, it is assumed that catch of the fishery was evenly distributed in state waters within each marine fished area. According to Ward and Burch (2012) this assumption introduces considerable potential for bias in the estimates of historical catches for individual sanctuary zones because it may lead to:

- over-estimation of the historical catch from a sanctuary zone if the fishing hotspots (e.g. rock lobster, abalone or marine scalefish) in state waters of that marine fished area were outside the sanctuary zone; and
- under-estimation of the historical catch from that sanctuary zone if the fishing hotspots (e.g. rock lobster, abalone or marine scalefish) were in a sanctuary zone.

According to Knuckey (2012) the industry estimate of displaced catch is somewhat lower than the estimate prepared by SARDI. The sanctuary zone catch of rock lobster was reported by Knuckey (2012) to be 700 kg. Based on this industry based estimate (which has not yet been reviewed by SARDI), the value of this catch is \$37,000. Consequently, the economic impacts would be less than those presented in Table 4-3.

4.2.1.5 Marine Scalefish

SARDI estimates of historic effort in draft sanctuary zones for the Marine Scalefish Fishery are provided in Table 4-4 and historic catch for the main fishery species in Table 4-5. The total sanctuary zone catch of marine scalefish represents 2.09 per cent of the average annual catch in the Upper South East region.

Table 4-4 Average annual Marine Scalefish effort in draft sanctuary zones by sector

Sector	Sanctuary zone effort (person days)	% effort of sector
Handline	1	<0.01
Haulnet	nil	nil
Longline	4	0.07
Other	6	0.01

Notes: based on 3 years of data

Source: Ward and Burch 2012.

The value of this sanctuary zone catch is approximately \$10,000.

4.2.1.6 Charter Boat

SARDI estimates indicate that historically there has been an average annual charter boat effort of 5 person days in the draft sanctuary zones in this marine park. This represents 0.02 per cent of the average annual effort for the charter boat industry. The value of this sanctuary zone effort is approximately \$1,000.

4.2.2 Aquaculture

Lacapède Bay Aquaculture Zone overlaps the entirety of SZ-2, however a special purpose zone will be placed over the sanctuary zone and HPZ-2 to allow for future planned finfish aquaculture activities. As such, there are no known current or potential impacts expected from the draft zoning in this marine park on current or future aquaculture enterprises. This is consistent with Government policy commitments. Any potential future prescribed criteria in aquaculture zone policies derived from Section 11 (3a) of the *Aquaculture Act 2001* could add cost to existing or future aquaculture activities, or have additional regulatory impact (PIRSA, pers. comm., 7 November 2011). However, no such prescribed criteria currently exist and potential impacts have not been assessed.

4.2.3 Property Prices

Given that the overall impact on the region is not expected to be large in absolute terms, the impact on property values is, similarly, not expected to be significant. States of Australia have introduced marine parks with sanctuary zones in the last decade without any known long-term effects on property values. External factors notwithstanding, the trend in Upper South East residential property prices illustrated in the regional socio-economic profile is unlikely to be affected by the proposed marine park zoning.

4.2.4 Tourism

The following assessment is based on discussions with the South Australian Tourism Commission, local councils and local offices of Regional Development Australia.

Fishing-based tourism has been identified as important to the local economy. Several organisations have raised the point that towns identified as 'fishing centres' that are comparatively remote are more vulnerable to a downturn in fishing tourism if fishing visitors perceive that there may be restrictions to their activities. As discussed in

section 4.3.5.2, the actual placement of sanctuary zones is unlikely to place real restriction on recreational fishing. However the perception that recreational fishing opportunities will be restricted by implementing 'no take' zones is real (for example, the charter boat industry has identified that they have benefited from an increased number of interstate clients in recent years who come to South Australia to fish because SA waters do not have marine park 'no take' zones). So there is potential for a downturn in fishing-based tourism in the short-term until visitors are informed and convinced of the actual situation on the water.

Ecotourism is an industry in its infancy and is expected to grow, however is unlikely to grow into a large industry because of the natural limitations of rough seas, cold water and sharks. Several organisations raised the issue of operator permits being a key factor in the ability of the industry to grow. In the past, one-year, renewable permits (issued under the *National Parks and Wildlife Act 1972*) were available which is viewed as a barrier to investment in this area. The permitting policy is being changed, with far greater flexibility on the length of time permits can be held, ranging from two-month permits up to 10-year permits⁷ which is seen as likely to boost business investment. There will be situations where eco-tourism operations will occur within sanctuary zones which may benefit from zoning by, for example, not having to share the space with fishers. In the long-term managed marine parks will provide certainty that the marine environment within them is being protected and this is likely to support the ecotourism industry, provided the necessary investment in tourism infrastructure and support services is undertaken.

Other, non-extractive tourism, such as diving, is likely to benefit from the implementation of sanctuary zones however more detailed assessment has not been possible.

4.2.5 Port, Harbour and Shipping Operations

The existing arrangement where shipping, ports and harbour activities are managed pursuant to the *Harbours and Navigation Act 1993* will remain. This includes dredging and channel maintenance, development or improvement of facilities for anchorage, vessel maintenance, loading, unloading and storage of goods, associated commercial and industrial development, sporting and recreational purposes. Under the Government policy commitment on shipping and harbours, all harbours declared under provisions of the *Harbours and Navigation Act 1993* will be zoned special purpose areas. Current and future operations in harbours will not be affected and have been accommodated within marine parks as reflected in the draft management plan zoning.

The shipping industry has suggested that marine park zoning may place potential restrictions on port, harbour and shipping facilities through zoning restrictions. The draft management plans have been prepared in such a way as to minimise any such restrictions and all ports have been excluded from marine parks.

It should be noted that aids to navigation and markers are permitted in any waters in any marine park.

The harbour of Robe has been declared a special purpose area and no significant impacts on shipping activities arising from zoning in this park are expected, which is consistent with Government policy commitments.

⁷ See DEWNR's current *Commercial Tour Operators' Licensing and Permitting Policy* at http://www.environment.sa.gov.au/parks/Get_Involved/Commercial_Tour_Operators

4.2.6 Mining

The existing arrangements where DMITRE Minerals and Energy Resources Division oversee activities that support the mineral, petroleum and geothermal resource industries, pursuant to the *Mining Act 1972*, the *Petroleum and Geothermal Energy Act 2000*, the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982*, will remain. All existing licences and leases will be accommodated with no change to existing conditions. Applications for new or renewal of licences and leases within and adjacent to marine parks will require the concurrence of the Minister responsible for marine parks under related amendments to the *Mining Act 1972* and the *Petroleum and Geothermal Energy Act 2000*. Where the proposed activity is consistent with the zoning regulations, no further approvals or permits will be required, apart from those required under legislation administered by DMITRE Minerals and Energy Resources Division. Section 19 of the *Marine Parks Act 2007* provides for consideration of activities that are inconsistent with marine park zoning regulations on a case-by-case basis with rigorous assessment and approval processes and due consideration of risk to environmental values (e.g. to consider new/emerging lower impact technologies). The Minister responsible for marine parks will be required to issue a special permit in such cases.

No mineral, petroleum or geothermal applications, leases or licences are currently listed for this marine park.

Adjacent to the marine park boundary from Wright Bay to Nora Creina Bay is covered by two geothermal exploration licences.

Two Petroleum Exploration Licences are adjacent to this marine park at Nora Creina and Guichen Bay. A gazettal of petroleum acreage has been made adjacent to the southern part of the park in Commonwealth waters.

As mentioned above, conditions attached to existing licences will not change and the operations to which these licences refer to will not be affected by zoning. Licence applications will be required to go through a joint approval process administered by DMITRE and DEWNR, which may be a potentially lengthier and therefore more costly process to the applicant. Zoning limits the types of exploration activities permitted, and could potentially discourage certain types of applications and hence limit exploration and exploitation of resources. However no examples have been highlighted.

4.2.7 Coastal Development

Marine parks will not prevent coastal developments approved under the *Development Act 1993*. Coastal developments and infrastructure are regulated under the provisions of the *Development Act 1993* with developments considered on a case by case basis by the relevant authorities to ensure that the achievement of the objects of the *Marine Parks Act 2007* and the aims of the specific zone where the development is proposed are supported appropriately. As part of the assessment process, advice or direction may be required from the Coast Protection Board and/or the Environment Protection Authority and other authorities, depending on the nature of the development. Development plans and significant projects are informed by the Planning Strategy which now includes the objects of the *Marine Parks Act 2007*.

The proclamation of the marine parks network will not affect access to, or use of, jetties, breakwalls or boat ramps.

There are no significant projects or infrastructure in this marine park. There is a proposal, at the prefeasibility stage, to develop a barge point at Kingston SE Harbor, just outside the park. No impacts from the proposed draft zoning are expected.

4.3 Social

4.3.1 Summary of method

The social impact assessment drew on multiple sources of information – a review of research relating to established marine parks elsewhere in Australia and overseas; an analysis of market research undertaken in relation to South Australian marine parks; an analysis of MPLAG minutes and of media reports relating to each park, a review of the social values statement prepared for the park, and analysis of the economic impacts identified.

Finally a Marine Parks Social Impact Assessment Tool (MPSIAT) was designed which sought feedback from MPLAG members on different types of social impact expected to flow from preliminary zoning options considered prior to the draft zones presented within the draft management plans.

The findings from these different sources were analysed separately and in combination to determine overall expected social impacts.

Although this report presents impact analysis relating to the draft zones, the MPSIAT findings are included because they represent part of the community consultation process and the draft zones reflect the SA government's response to the findings of that process. Seven of 13 members⁸ (54 per cent) of the Upper South East MPLAG responded to the online social impact assessment for the Upper South East Marine Park.

4.3.2 Expected social impacts – at a glance

The overall social impacts of the Upper South East Marine Park on communities living in the Upper South East region are expected to be low given the magnitude of the economic impacts that have been projected. Commercial fishing is an important source of employment and is estimated to contribute 59 jobs to employment in the region, compared with tourism which contributes 200 jobs. Economic impact assessment identifies the loss of less than one fte commercial fishing-related jobs in a region of low unemployment and low levels of measured relative disadvantage. The State Government has committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above. The impact on recreational fishing is considered to be low with adjustments in zoning designed to minimise any potential negative impacts. Consequently, any impact on local community identity as a fishing centre, and on fishing as a way of life is also likely to be low.

Experience elsewhere in Australia and internationally (Ledee *et al* 2011, Cocklin *et al* 1998), suggests that a range of benefits will become evident over time. These include increased opportunities for education about marine life and conservation, and

⁸ Any MPLAG members who indicated they did not wish to participate in the social impact assessment a priori were not approached.

increased tourism and ecotourism opportunities. Experience elsewhere indicates that these benefits usually take approximately five years to be evident, and that in the earliest stages of marine protected areas being developed, communities are more likely to identify possible negative impacts than potential benefits. It takes time to observe how the park's ecological and economic impacts evolve, with social impacts (positive or negative) flowing from these.

Certainly at this stage of the South Australian marine parks' development, monitoring of media reports, feedback from MPLAGs and analysis of their meeting discussions, illustrates the trend to expect the changes associated with their development to be problematic. One very important factor that affects community attitudes is how informed they are, and feedback from market research and MPLAGs, as well as analysis of media reports indicates a gap in this information. In particular, increasing communities' understanding of the scientific rationale underpinning marine protected areas, and the benefits that these can bring, needs to be enhanced.

Marine parks have broad support in the South Australian community. Market research commissioned by the state government between 2006 and 2012 (McGregor Tan Research 2006, 2007, 2008 and 2009; Square Holes 2009, 2011 and 2012) found strong support for the concept of marine parks among South Australians with approximately 85 per cent in favour of them in 2012 (87 per cent support in metropolitan Adelaide and 82 per cent support in regional areas). People interviewed for this research were able to identify seven main benefits arising from marine parks:

1. preservation of the environment for future generations
2. protection and conservation of marine habitats and wildlife
3. increases in fish stocks
4. greater opportunities for scientific research and education
5. greater opportunities for nature based tourism and recreation
6. protection of cultural and heritage sites
7. greater certainty for marine industries and users.

The research found in 2011 and again in 2012 that 88 per cent believe that protection of the marine environment through managed marine parks is the responsibility of current generations for the benefit of future generations.

The market research found that loss of commercial benefits is a particular concern, particularly for those living in regional areas (33 per cent in 2012) compared with those in metropolitan Adelaide (22 per cent in 2012). Those least likely to support marine parks have been fishing groups (in 2009 55 per cent of respondents who did not support marine parks identified restricted fishing as the reason, this dropped to 39 per cent in 2012).

Between 2011 and 2012 the market research findings identify a decline in those who believe they will have limited access to marine parks and an increase in those who associate swimming, boating and snorkelling with marine parks.

4.3.3 Education and Wellbeing

A majority of MPSIAT respondents expected that implementing the zoning in the marine park would provide increased opportunities for education about marine life or

improve understanding about marine conservation issues. International research findings confirm that this is a key outcome and benefit of marine protected areas (Angulo-Valdes and Hatcher 2010).

The majority of respondents expected the park zoning to have no impact, either positive or negative, on personal and community quality of life and overall way of life. The draft zoning proposal is the result of considerable discussion about how potential negative impacts on users of marine resources in the marine park can be minimised. For this reason it is expected that personal quality of life in general and quality of community life is unlikely to be negatively impacted by the draft zoning proposal.

4.3.4 Culture and Heritage

DEWNR undertook a process of consultation with Aboriginal stakeholders about the establishment of marine parks. No significant negative impacts were identified. However it is important that further consultation be undertaken in relation to the likely impact of the draft zoning.

Aboriginal people have interacted with the marine environment for thousands of years and their relationships with the sea remain strong through customs, laws and traditions. Traditional usage, Aboriginal cultural heritage, Indigenous Protected Areas, Indigenous Land Use Agreements and Native Title considerations are being taken into account in developing the management plan for the Upper South East Marine Park.

Three Aboriginal groups, the Ngarrindjeri, Buandig and Meantank people have traditional associations with areas of the marine park including the marine environment and associated marine life. The Ngarrindjeri native title claim (1998) is included in parts of the Upper South East Marine Park.

The marine park was considered by most MPSIAT respondents to be unlikely to help preserve local Australian culture and heritage. However, the majority expected the marine park zoning would help to maintain local community identity as a fishing centre for areas such as Boatswains Point and Wrights Bay.

The impact on community identity is too early to determine at this stage, but given the low impact expected on fishing, it is unlikely that any negative expectations will be realised. Furthermore, there will be different groups within the community with varying degrees of attachment to identity as a fishing centre, just as there will be a range of views about being identified as a place of ecological value.

4.3.5 Recreation and Fishing

4.3.5.1 Recreation

About half of the MPSIAT respondents expected that the MPLAG zoning would encourage more recreational activity, and a minority expected a greater range of recreational activities and improved recreational facilities to be likely (see Appendix Table 4-4).

4.3.5.2 Recreational Fishing

The following assessment is based mainly on the SAMPIT mapping, with material from separate interviews with the South Australian Recreational Fishing Advisory Council (SARFAC) and the DEWNR project coordinators who facilitated the MPLAG process, where appropriate.

The entire marine park is fished recreationally and all along the coastline is particularly popular. SZ-1 is located away from the beach access points 42 Mile and Tea Tree Crossing and will limit the impact on fishers. SZ-2, in Lacapède Bay is in a moderately fished area and will have some impact on boat based fishing.

SZ-3 off Fisherman's Rock at Cape Dombey is a very small exclusion zone and should have limited impact on fishing due to its size.

Overall the management plan zoning is expected to have low impact on recreational fishing, with access to areas fished near or from the shore maintained.

4.3.5.3 Commercial Fishing

The overall social impacts of the Upper South East Marine Park on communities living in the Upper South East region are expected to be low given the magnitude of the economic impacts that have been projected. Commercial fishing is an important source of employment and is estimated to contribute 59 jobs to employment in the region, compared with tourism which contributes 200 jobs. Economic impact assessment identifies the loss of less than one fte commercial fishing-related jobs in a region of low unemployment and low levels of measured relative disadvantage. The State Government has committed to buy out licences and quota entitlements to offset any unsustainable displaced effort and catch. Although details of the buyout are yet to be finalised, any such payments have the potential to at least partially offset the negative impacts outlined above. Consequently, any impact on local community identity as a fishing centre, and on fishing as a way of life is also likely to be low.

The following potential social impacts have been identified for the rock lobster fishery.

The designation of sanctuary zones in State waters has the potential to transfer fishing activity into deeper, offshore Commonwealth waters (PIRSA, pers. comm., 29 September 2011). If this occurs, it could increase safety risks with a probable increase in the length of fishing trips.

Given the preference for fishing in State waters, reducing the area of State waters that can be fished is likely to result in an increase in conflict amongst commercial rock lobster fishers in these waters. Furthermore, most recreational potting for rock lobsters is undertaken in State waters. The declaration of sanctuary zones in these waters is likely to result in an increase in the conflict between recreational and commercial fishers (PIRSA, pers. comm., 29 September 2011). It could be expected that this type of conflict would be resolved over time and not persist into the medium to long-term.

Australian researchers have identified the potential psychological impacts on fishing families arising from uncertainty about fishing business viability, reduced family income, reduced self-esteem arising from the loss of fishing occupation and the difficulty of finding alternative employment in the region (Schirmer et al. 2004: 7-8). Much depends on individual fishers' capacity to adapt which in turn has been found to depend on their financial situation, ability to work elsewhere, business skills and willingness to accept

rather than resist change (Marshall and Marshall 2007). This diversity means that fishers will vary significantly in the way marine parks affect them, and will have differing views on that impact, as is reflected in Appendix Table 4-4.

Furthermore, there is minimal research on the social impacts of marine parks on commercial fishers and their families in particular, and on communities as a whole (Voyer 2011, 2012, Beeton et al 2012, Fairweather et al 2009). The Great Barrier Reef Marine Park Authority is cited as one exception to this trend (Voyer et al 2012, Beeton et al 2012) while social impact research has also been undertaken in relation to Ningaloo Marine Park in Western Australia (Northcote & Macbeth 2008).

By contrast, economic impacts of marine parks have been significantly more researched. Australian researchers have found that most commercial fishers have adapted their fishing activity and fishing business at least moderately well in the five years following implementation of the 2004 Great Barrier Reef Marine Park rezoning, leading them to conclude that many of the impacts experienced by fishers might be short-term and decline over time as fishers adapt to the change (Ledee et al. 2011: 8). Similarly, research undertaken in New Zealand's Leigh Marine Reserve has found that almost two decades after it was established in 1975, commercial and recreational fishers reported that fishing outside the boundaries had improved over time (Cocklin et al. 1998).

4.3.6 Local Government, Population and Housing

4.3.6.1 Local Government

Through the SA Regional Organisations of Councils, facilitated by the Local Government Association SA, all local government councils which border marine parks in SA were invited to participate in a survey about potential impact of marine park zoning on council operations, council infrastructure and council revenues.

Kingston District Council responded, and raised concerns that if the impact on local commercial fishing was significant which, if it depressed property prices, could impact on council revenues. No other impacts were envisaged.

As the proposed zoning is not expected to have a significant impact on the local commercial fishing industry, property prices and hence council revenues should not be impacted.

4.3.6.2 Population and housing

Economic impact assessment identifies the loss of less than one fte commercial fishing-related jobs in a region of low unemployment and low levels of measured relative disadvantage. Depending on the skills match, this suggests that alternative regional opportunities for unemployed labour may not be difficult to find. The jobs impact on the fishing industry is not expected to have significant impact on the regional population or housing.

4.3.7 Community

The local community was expected by most MPSIAT respondents to adapt well to changes brought by the proposed zoning of the park and to be sufficiently resilient to manage these changes (see Appendix Table 4-6).

A minority of MPSIAT respondents expected there to be new business opportunities arising from the marine park and a significant minority saw the need for training programs to adapt to new occupations. It is possible that new employment opportunities will emerge, and it will be important for local people to take advantage of those, with training being potentially important to their ability to do so.

A majority of MPSIAT respondents believed the marine park would be a source of pride to the local community. A minority expected that its establishment would increase events and other activities that bring the community together. On the other hand a minority of respondents perceived the park as a source of future division in the local community.

While there is little research evidence about the impacts of marine protected areas on communities as a whole, there are several studies in Australia and overseas that have identified a range of positive impacts, including enhanced tourism opportunities with flow on benefits to other sectors in the local economy (Ward et al. 2001, Cocklin et al. 1998). However, these and other benefits are not apparent in the early implementation stages and where positive impacts are reported these tend to be evident after about five years, becoming increasingly evident over the longer term (Cocklin et al. 1998, reporting on New Zealand marine parks established from 1975 onwards).

Given the limited impacts expected on commercial sectors and on recreational fishing in this region from the proposed zoning, it is expected that the proposed management plan will not present significant adjustment pressures to the community, although some adjustment is expected from the commercial fishing sector.

4.3.8 SEIFA based analysis of impacts

Less than one fte job loss is expected to be associated with the Upper South East Marine Park. Additionally, as an area of very low unemployment (2.3 per cent) and low relative disadvantage (SEIFA and leading indicators) this is likely to have a minimal social impact.

Table 4-6 Social impact for Upper South East Impact Region

Impact region	Upper South East
Marine Park # and Name	18: Upper South East
Jobs impact (fte)	0
% impact on region	0%
Regional unemployment	Very Low (2.3%)
SEIFA relative disadvantage (SLA)	Low
Index of Economic Resources (SLA)	Low
Index of Education & Occupation (SLA)	Low
Proportion of single parent families ^{b,c}	Low
Proportion with education lower than year 12 ^{b,c}	Low
Proportion of population with Indigenous background ^{b,c}	Low
% fair or poor health (self report)	Low
Expected social impact	Low

Note 2 SLAs associated with Impact region

Note rounding errors do occur.

^a Impacts too small to model.

^c Source: Australian Bureau of Statistics (accessed 2012). *TableBuilder 2006 Census, South Australia (SLA)*. Canberra: ABS

^d Compiled by PHIDU using data estimated from the *2007-08 National Health Survey* (NHS), ABS (unpublished); and ABS Estimated Resident Population, average of 30 June 2007 and 2008

Note, an Impact Region or SLA is considered high if it has at least one SLA in the highest decile in SA (a moderate value falls in the second highest decile).

4.3.9 Next Steps in Social Impact Assessment

4.3.9.1 Short term objectives

Social impact research constantly identifies insufficient information as a cause of concern for communities affected by the establishment of marine parks, and notes how important such information can be for effective participation in the process of designing and implementing these parks. This includes better communication of the underpinning science of marine protected areas and how it has influenced their design and the setting of zones (Fairweather et al. 2009). The more recent review of marine parks in NSW (Beeton et al 2012) also found that insufficient community informing, and an associated lack of resourcing for this purpose, has resulted in marine parks-related decision making and the benefits of marine parks being insufficiently understood the general public. There is also research evidence of the importance of informed participation in marine park decision making and management, and in the enforcement of compliance (McPhee 2011, Cocklin et al. 1998).

In this context it is important to note that a range of information provision and consultation strategies were implemented by DEWNR to inform the marine parks decision making process. The SAMPIT and MPLAG processes provided an important opportunity for key stakeholders to contribute to the design of the marine park. This impact assessment report is the foundation for a further community consultation

process. Further details about the information provision and consultation processes undertaken by DEWNR are detailed in section 1.1.

A clear message from the market research, media reporting and feedback from MPLAGs is that the scientific arguments in favour of establishing marine parks, including the Upper South East Marine Park, need to be better understood by the wider community. This is one of the functions of this impact statement which is designed to inform judgements on the impact of the draft zoning proposal. MPSIAT feedback indicates that those members who do not understand the scientific arguments, also tend to disagree that the park's boundaries and proposed zoning are based on sound science.

In their evaluation of New South Wales marine parks, Fairweather et al. (2009: 26) recommended to the Marine Parks Advisory Council of NSW that they be '*... more assertive about the science and other research behind the NSW Marine Park system ...*' partly to refute misinformation being spread by opponents of the parks but also to ensure levels of understanding were increased. Acknowledging community concerns about possible negative impacts on their lives, the researchers identified the importance of ongoing socio-economic impact assessment as one means of improving understanding of the value of marine protected areas to Indigenous, recreational and commercial users of marine parks, mainly because it can capture the economic and social benefits that develop over time (Fairweather et al. 2009: 15-17).

MPSIAT respondents expressed the need for more information about this marine park and how it will operate. Reliance on public forums, open days and processes that involve giving information rather than listening to local voices, have been criticised in local media.

It is important to note that a range of information provision and consultation strategies were implemented by DEWNR to inform the marine parks decision making process. The SAMPIT and MPLAG processes provided an important opportunity for key stakeholders to contribute to the design of the marine park. This impact assessment report is the foundation for a further community consultation process. Further details about the information provision and consultation processes undertaken by DEWNR are detailed in section 1.1.

4.3.9.2 Ongoing impact assessment

Social impact assessment that is repeated over time, provides a mechanism for informing as well as engaging communities, involving them in decision making, and identifying and assisting with managing intended and unintended social consequences (Vanclay 2005). However coastal zone management is often criticised for a failure to facilitate effective community engagement in what has been termed a 'democratic deficit' (Vanclay 2012).

Perceptions of social impacts of change reflect knowledge, experience, values and roles. They provide a guide to possible but not certain impacts. To provide greater certainty about likely impacts we need to subject marine park zones to economic and environmental impact identification processes like those adopted in this impact assessment statement, repeating them over time to measure changes. The results of this process are necessary to inform judgments about the magnitude of social impacts.

The opportunity now exists for key stakeholders to provide perspectives on social impacts in the light of new knowledge about industry, employment, species and habitat impacts provided in this impact statement.

Appendix 1 Socio-economic Profile – Upper South East

This socio-economic profile provides a statistical summary of key economic and social information for the Upper South East region and, where possible, South Australia (SA). The profile brings together a wide range of existing Australian Bureau of Statistics (ABS) data and some non-ABS data. It has been designed, at a broad level, to aid understanding of the economic and social structure of the region, to indicate how the Upper South East region contributes to the State economy and to monitor trends in economic growth or decline.

The Upper South East region is located south-east of Adelaide (Figure 1). The two statistical local areas (SLAs) that comprise the region are Kingston (DC) and Robe (DC). The Upper South East regional economy is relevant to the Upper South East marine park (MP18). Table 1 presents a summary of the key economic and social information detailed further in the report.

Appendix Figure 1–1 Upper South East region

Appendix Table 1-1 Summary of key economic and social indicators for the Upper South East region

Indicator	Upper South East	SA	Upper South East as a proportion of SA
Population, 2010/11 (no.)	3,982	1,656,299	0.2%
Birth Rate, 2009/10 (births/1000 residents)	8.8	12.2	-
Death Rate, 2009/10 (deaths/1000 residents)	4.8	7.9	-
Age Distribution, 2009/10:			
Proportion of Population aged 0-14	16%	18%	-
Proportion of Population aged 15-64	64%	67%	-
Proportion of Population aged 65+	21%	16%	-
Dependency Rate, 2009/10:			
Child	26%	27%	-
Aged	32%	23%	-
Total	57%	50%	-
Population Projection, Increase from 2006 to 2026	5%	23%	-
Employment, June qtr 2011:			
Labour Force (no.)	2,211	867,500	0.3%
Unemployed (no.)	73	45,300	0.2%
Unemployment Rate	3%	5%	-
Participation Rate, 2009/10	65%	63%	-
Businesses, June 2009 (no.)	587	141,625	0.4%
School Enrollments, 2011	511	247,356	0.2%
Tertiary Enrollments, 2011	324	208,706	0.2%
Non-school Qualifications, 2006	1,100	595,379	0.2%
Mean Taxable Income, 2009/10 (\$)	48,217	54,349	-
Proportion of Taxable Individuals, 2009/10	67%	74%	-
Value per Building Approval, 2010/11 (\$)	269,842	236,269	-
Median Dwelling Price, 2010/11 (\$)	285,000	357,500	-
Commercial Fishing, Ave/yr 2000/01 to 2009/10:			
Catch (t)	153	47,581	0.3%
Value of Catch (\$m)	5	202	2.6%
Charter Boats, Ave/yr 2007/08 to 2009/10 (no. of fish)	n/a	146,341	-
Recreational Fishing, 2007/08:			
Fishers (no.)	9,759	236,463	4.1%
Days Fished (no.)	35,866	1,054,200	3.4%
Gross Regional Product, 2009/10 (\$m)	146	80,356	0.2%
Employment, 2009/10 (fte)	1,699	774,953	0.2%
Tourism, 2009/10 (\$m)	29	4,524	0.6%
Other Regional Exports, 2009/10 (\$m)	105	26,757	0.4%
Regional Imports, 2009/10 (\$m)	163	40,573	0.4%

Demographic indicators

- The estimated resident population of the Upper South East region increased by 7 per cent (almost 250 persons) between 2000/01 and 2010/11 and was around 4,000 persons in 2010/11. Over the same period SA experienced population growth of almost 10 per cent (Chart 1).
- A marginal increase in population together with falls in the birth and death rates (ABS 2011a,b) implies limited inward migration to the region over the period.
- Compared with the age distribution of the state as a whole, the Upper South East region has a smaller concentration of younger people (aged 0 to 14 years) and of persons aged 15 to 64 years and, consequently, a higher share of people aged 65 and over (Table 2).

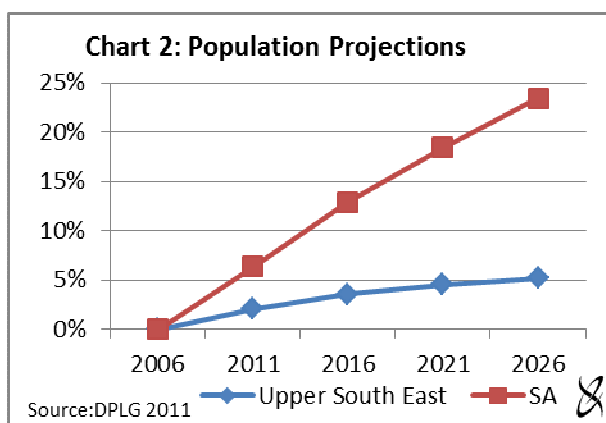

Appendix Table 1-2 Age distribution of the population for the Upper South East region and SA, 2000/01 to 2009/10

Age	Year									
	2000/01	2001/02	2002/03	2003/04	2004/05	2005/06	2006/07	2007/08	2008/09	2009/10
Upper South East										
0 to 14	21%	21%	20%	20%	20%	19%	18%	17%	16%	16%
15 to 64	62%	62%	63%	63%	63%	63%	63%	63%	64%	64%
65 or older	17%	17%	17%	17%	17%	18%	19%	20%	20%	21%
Total	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

Total	100%	100%	100%	100%	100%	100%	100%	100%	100%	100%

Source: ABS 2010a and ABS 2011c

- The total dependency rate for the Upper South East region was 57 per cent in 2009/10. This implies that for any dependent person (persons aged 0 to 14 and over 65) there were 2 persons providing support. At the state level the dependency rate was 50 per cent in 2009/10 (ABS 2010a and ABS 2011c).

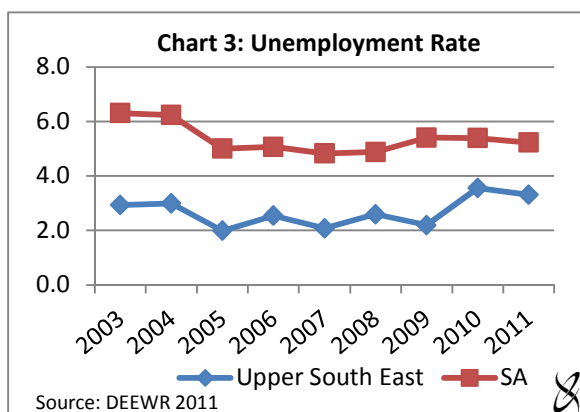

- According to the Department of Planning and Local Government (DPLG) population projections⁹, the total population in the Upper South East region is likely to increase by approximately 5 per cent by 2026, whereas the SA population is expected to increase by around 23 per cent (Chart 2).

- Population projections for the Upper South East region indicate there will be a slight decrease for persons aged 0 to 14 years (by 2 per cent from 2006) and in the working age population (15 to 64 years) (by 9 per cent from 2006). The population projections for persons 65 or older indicate that a significant increase of around 60 per cent in this age group is expected over the 20 years to 2026 (DPLG 2011).

Labour force indicators

- In the June quarter of 2011, the labour force in the Upper South East region was approximately 2,200 (by place of residence), an increase of 15 per cent from the March quarter of 2003. By comparison, the labour force for SA increased by 14 per cent over the same period (DEEWR 2011).
- The number of unemployed persons in the Upper South East region was 67 in March 2003 and 73 in June 2011, an increase of approximately 9 per cent over the period. By comparison, the number of unemployed persons in SA decreased by approximately 11 per cent over the same period (DEEWR 2011).
- The unemployment rate in the Upper South East region was 3.3 per cent in the June quarter of 2011. The unemployment rate for SA for the same quarter was higher at 5.2 per cent (Chart 3).
- The labour force participation rate for the Upper South East region was consistently above that for the whole of SA over the years 2002/03 to 2009/10. In 2009/10 the labour force participation rate in the Upper South East region was around 65 per cent compared to 63 per cent for SA as a whole (DEEWR 2011, ABS 2010a and ABS 2011c).

⁹ Population projections are not forecast, they based on ABS 2006 *Census of Population and Housing* resident population estimates and trends in mortality, fertility and overseas and interstate migration for South Australia. A range of estimates are published, based on the assumed level of migration. The 'medium level of migration' series has been utilised in this analysis. The methodology used to compile the projections was not influenced by local factors such as land availability or zoning, that is, it was assumed that these factors would not be limiting on population growth.

Business Count

- The total number of businesses operating at the end of June 2009 in the Upper South East region was 587, 0.4 per cent of the total businesses operating in SA (almost 142,000) (ABS 2011d).
- Of the 587 businesses operating in the Upper South East region, approximately 50 per cent were classified in the agriculture, forestry and fishing sector and 10 per cent were in the construction sector (ABS 2011d).
- Over half of the businesses (52 per cent) operating in the Upper South East region did not employ anyone and one quarter (25 per cent) employed between 1 and 4 people (ABS 2011d).

Education and training

- The total number of residents in the Upper South East region with a non-school qualification decreased slightly over the 5 years to 2006. In 2006, approximately 34 per cent of all persons aged 15 or over held some form of non-school qualification, compared with 35 per cent in 2001 (ABS 2007 and 2010a).
- The level of qualification was generally lower for the Upper South East region than for SA, with the proportion of persons with a bachelor degree or higher being significantly lower (Table 3).

Appendix Table 1-3 Highest level of qualifications for persons aged 15 and over in the Upper South East region and SA, 2001 and 2006 ^a

Qualification	Upper South East			
	2001		2006	
Postgraduate Degree	5	1%	3	0%
Graduate Diploma & Graduate Certificate	28	3%	25	2%

^a 2011 Census data on qualifications not available until the second release in October 2012.

Source: 2006 Census of Population and Housing (ABS 2007).

- The total number of students enrolled in primary school in the Upper South East region decreased by 34 per cent between 2001 and 2011. This decrease was principally comprised of a decrease in enrolments in government schools (Table 4).
- The total number of Upper South East region students enrolled in secondary school decreased by 16 per cent between 2001 and 2011. The decline was comprised of a 19 per cent decrease in government school enrolments and a small rise in non-government school enrolments (Table 4).
- Between 2001 and 2011 the total number of Upper South East regions residents enrolled in a higher education institute increased significantly (74 per cent). This is greater than that for SA as a whole (38 per cent increase) (ABS 2012b).

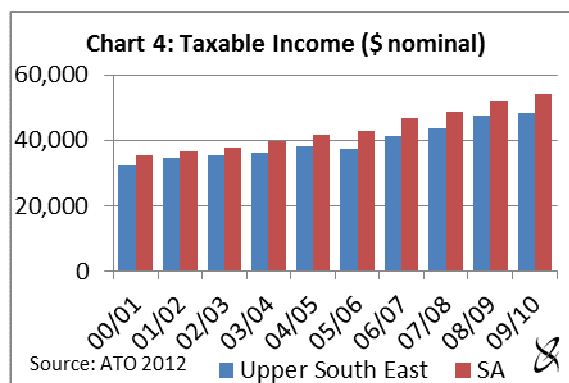

Appendix Table 1-4 School enrolments in the Upper South East region and SA, 2001, 2006 and 2011

	Census Year		
	2001	2006	2011
Upper South East			
Pre-school	60	40	54

Total Primary Student	147,125	139,016	136,176
Secondary Students			
- Government	57,770	51,752	51,901
- Non-Government	31,725	35,172	38,742
Total Secondary Students	89,495	86,924	90,643

Source: 2011 Census of Population and Housing (ABS 2012b)

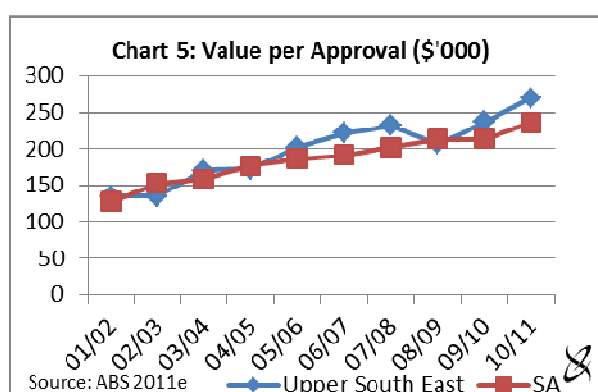

Household income

- The mean individual taxable income in the Upper South East region was consistently lower than the state average between 2000/01 and 2009/10 (Chart 4).
- Over the period 2000/01 to 2009/10, the mean taxable income (in nominal terms) increased by 49 per cent in the Upper South East region and 54 per cent in SA as a whole (Chart 4).
- In 2009/10 mean taxable income was approximately \$48,200 in the Upper South East region and around \$54,350 in SA (Chart 4).

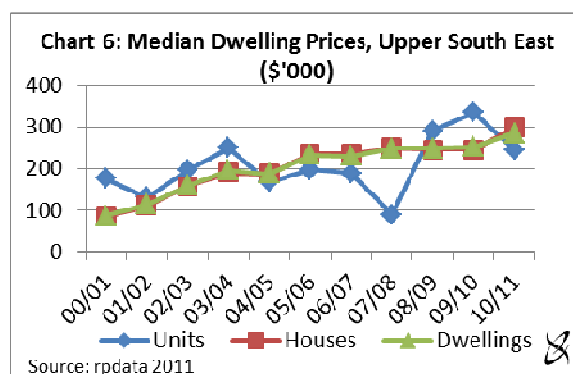

Building approvals

- The number of building approvals for the Upper South East region increased by 39 per cent over the period 2001/02 to 2010/11. However, the total value of approvals increased by significantly more than that, from \$5 million in 2001/02 to \$14 million in 2010/11, a rise of 179 per cent (ABS 2011e).
- For SA the total number of approvals was 3 per cent greater in 2010/11 than in 2001/02, while the total value was 90 per cent higher (ABS 2011e).
- The average value per approval in the Upper South East region doubled, from \$135,000 in 2001/02 to \$270,000 in 2010/11 (Chart 5).
- For SA, the value per approval increased from \$128,000 in 2001/02 to \$236,000 in 2010/11, an increase of 85 per cent (Chart 5).

Property Values

- Between 2000/01 and 2010/11 the median unit price in the Upper South East region increased by 40 per cent, from \$175,700 in 2000/01 to \$246,000 in 2010/11 (Chart 6). The median unit price in SA as a whole increased by 215 per cent over the 10 year period, from almost \$102,000 to \$320,000 (rpdata 2011).
- The median house price in the Upper South East region increased by 251 per cent between 2000/01 and 2010/11, from \$85,000 to \$298,000 (Chart 6). In comparison, house prices in SA as a whole increased at a lower rate, from \$126,000 to \$370,000 over the same period, a 194 per cent increase (rpdata 2011).
- Overall, median dwelling (units and houses) prices increased by 233 per cent in the Upper South East region (\$285,000 in 2010/11) and 197 per cent in SA as a whole (\$357,500 in 2010/11) over the period 2000/01 to 2010/11 (rpdata 2011).

Commercial Fishing

- The average annual catch of abalone in the Upper South East region over the past 10 years, 2000/01 to 2009/10, was around 7.5 tonnes. The value of this average annual catch was almost \$270,000 (SARDI by special request).
- Annual catch of rock lobster in the Upper South East region averaged around 89 tonnes with a beach value of approximately \$3.6 million over the period 2000/01 to 2009/10 (SARDI).
- Annual average catch of Marine Scalefish species including miscellaneous species in the Upper South East region over the period 2000/01 to 2009/10 was almost 56 tonnes with a beach value of around \$330,000 (SARDI).

Recreational Fishing

- Between 2000/01 and 2007/08 the total number of SA resident recreational fishers (those aged 5 and older) in the Upper South East region (regions 22 and 23 in the report South Australian Recreational Fishing Survey 2007/08 (Jones 2009)) decreased by 67 per cent, from almost 30,000 in 2000/01 to 10,000 fishers in 2007/08.
- Similarly, at the state level the number of SA resident recreational fishers decreased from approximately 317,200 in 2000/01 to around 236,500 fishers in 2007/08 (a 25 per cent decrease) (Jones 2009).
- A similar pattern occurred in the total number of days fished by SA resident recreational fishers. In the Upper South East region the number of days fished by SA resident recreational fishers decreased from around 84,000 days in 2000/01 to approximately 36,000 days in 2007/08 (a 57 per cent decline) (Jones 2009).
- For SA as a whole, the total number of days fished by SA resident recreational fishers almost halved over the seven years, from 1.83 million days in 2000/01 to 1.05 million days in 2007/08 (Jones 2009).

Economic Contribution of Tourism to the Region

In aggregate, it was estimated that expenditure by tourists in the Upper South East region in 2009/10 (approximately \$29m (TRA 2011 and EconSearch analysis)) generated the following level of regional economic and demographic activity.

- Approximately \$11 million in GRP which represents 7.6 per cent of the regional total (\$146 million).
- Approximately 260 full-time and part-time jobs which represents 14.2 per cent of the regional total (1,900 total jobs).
- Almost 200 fte jobs which represents 11.7 per cent of the regional total (1,700 fte).

Regional Economic Structure

- At the time of the 2006 population census it was estimated that approximately 80 per cent of the jobs in the region were held by local residents and the balance were held predominantly by residents of adjacent regions (i.e. travelled to work from the surrounding SLAs). Approximately 93 per cent of employed residents were employed locally, with the balance travelling to other areas in SA for work¹⁰.
- It was estimated that there were approximately 1,900 jobs (1,700 fte jobs) in the Upper South East region in 2009/10 (by place of remuneration) (Table 5).
- In 2009/10, the top four contributors to total jobs in the region were the agriculture, forestry and fishing (32 per cent), accommodation, cafes and restaurants (14 per cent), retail trade (13 per cent each) and health and community services (7 per cent) sectors (Table 5).
- The Upper South East gross regional product (GRP) was estimated to be \$146 million in 2009/10 (Table 6). This compares with gross state product (GSP) in the same year of \$80.36 billion (ABS 2010b).
- The GRP of the Upper South East region comprised approximately 0.2 per cent of the SA GSP.
- In 2009/10, the top contributors to GRP were the agriculture, forestry and fishing (34 per cent), ownership of dwellings (10 per cent) and manufacturing, accommodation, cafes and restaurants and building and construction (7 per cent each) sectors (Table 6).
- Expenditure by households accounted for just under one third of the total value of goods and services imported into the region in 2009/10. Among of the intermediate sectors, the top importers in the region in 2009/10 were the agriculture, forestry and fishing (11 per cent) and building and construction (10 per cent) sectors (Table 7).
- Expenditure by tourists (\$29m) contributed approximately 22 per cent of the total value of exports from the region in 2009/10 (Table 7).
- The top contributors to the value of 'other exports' from the region in 2009/10 were the agriculture, forestry and fishing (58 per cent), manufacturing (18 per cent) and accommodation, cafes and restaurants (9 per cent) sectors (Table 7).

¹⁰ Based on detailed 'journey to work' employment data obtained from the ABS 2006 Census of Population and Housing using the TableBuilder database.

Appendix Table 1-5 Employment, household income and household expenditure, Upper South East region, 2009/10 ^a

SECTOR	Total Employment		FTE Employment		Household Income		Household Expenditure	
	(jobs)	(%)	(fte)	(%)	(\$m)	(%)	(\$m)	(%)

Appendix 2 Activities and Uses Tables

The following tables summarise how activities and uses are expected to be managed once marine park management plans are adopted. The prohibitions and restrictions described in the tables (grey shaded boxes) will be represented in the *Marine Park (Zoning) Variation Regulations 2012*.

Section 4 of the *Marine Parks Act 2007* establishes four types of marine park zones. These are General Managed Use, Habitat Protection, Sanctuary and Restricted Access Zones.

Section 5 of the *Marine Parks Act 2007* provides for Special Purpose Areas. These are areas within a marine park, defined by management plans, in which specified activities will be allowed that would otherwise be prohibited or restricted by zoning.

No additional permits under the *Marine Parks Act 2007* will be required if the activity is already permitted or licensed under another Act.

Exemptions

- The Minister responsible for marine parks may provide a permit for any activity to take place that would not ordinarily be allowed in a specific zone in accordance with section 19 of the *Marine Parks Act 2007*.
- The Regulations also provide an exemption for any person acting in the course of an emergency.
- The Regulations will not apply to a person exercising official powers or functions under a State or Commonwealth Act or an Aboriginal person acting in accordance with an ILUA or Aboriginal tradition..

Existing activities and uses

When management plans are developed, existing and reasonably foreseeable activities and uses will be accommodated, (as outlined by the policy commitments endorsed by Government) by appropriate zoning, the application of Special Purpose Areas or the provision of permits. Apart from fishing activities, any permits, licences or leases that are current at the time of the adoption of management plans, will not be affected by these restrictions.

KEY

GMUZ	General Managed Use Zone - being a zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing ecologically sustainable development and use
HPZ	Habitat Protection Zone - being a zone primarily established so that an area may be managed to provide protection for habitats and biodiversity within a marine park, while allowing activities and uses that do not harm habitats or the functioning of ecosystems
SZ	Sanctuary Zone - being a zone primarily established so that an area may be managed to provide protection and conservation for habitats and biodiversity within a marine park, especially by prohibiting the removal or harm of plants, animals or marine products
RAZ	Restricted Access Zone - being a zone primarily established so that an area may be managed by limiting access to the area

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

RECREATION, EDUCATION AND OTHER

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Operating aircraft				limit	Limit: Aircraft cannot fly within 300m of the ground or sea level, and helicopters not within 500m of the ground or sea level.
Diving e.g. scuba/snorkel					
Pedestrian access					
Recreational boating/yachting					
Surfing/swimming					
Domestic animals			limit		Limit: Dogs on leads (up to 2m long); or animals confined to vessels/vehicles; or animals under effective control and behaving in accordance with relevant local Council by-laws.
Research			permit	permit	Permit ³ : A permit is not required for research authorised under another Act.
Commercial photography / film making			permit		Permit ³ : A permit is not required for commercial photography/film making authorised under another Act.
Competitions / organised events (non-fishing)			permit		Permit ³ : A permit is not required for non-fishing competitions/organised events authorised under another Act.
Tourism operations			permit		Permit ³ : A permit is not required for tourism operations authorised under another Act.

RECREATION, EDUCATION AND OTHER					
	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Animal feeding/baiting/berleying ¹					
Motorised water sports ²					
Lighting and supervision of fires		limit	limit		Limit: Lighting and supervision of fires is confined to designated areas.
Camping		limit	limit		Limit: Camping is confined to designated areas.
Collection of naturally occurring materials for burning in fires					

Notes:

¹ Feeding/baiting/berleying animals is not recommended in marine parks, except as required for fishing, aquaculture, research or tourism purposes.

² A person may transit through a sanctuary zone in a motorised vessel, but gear such as water skis or a wake board must be stowed.

³ Standard permits (and conditions) may be issued for activities that are deemed to be low impact. All other activities will be subject to case-by-case assessments and non-standard permits (and conditions) may be issued. DEWNR will develop a permit policy to provide clear guidance to users about activities that require permits.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

FISHING AND COLLECTING (commercial, recreational and traditional)

Fishing activities are regulated under provisions of the *Fisheries Management Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Bait digging/pumping					
Berleying for fishing					
Cockling (pipi and mud cockles)					
Collecting fish by hand (abalone, urchin, scallop, etc)					
Line fishing (including long lining)					
Netting (e.g. dab, haul, swing, gill, beach or power)					
Pot and trap fishing (including drop/hoop nets)					
Purse seine netting (including sardine)					
Raking (crab)					
Spear fishing					
Competitions / organised events (fishing)					

FISHING AND COLLECTING (commercial, recreational and traditional)

Fishing activities are regulated under provisions of the *Fisheries Management Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Traditional fishing and collecting (Aboriginal)					Limit: Activity is limited to persons who are exercising their rights in accordance with an ILUA or Aboriginal tradition.
Collecting seagrass/algae (including beach cast)					
Collecting sessile assemblages, stromatolites, fossils and archaeological remains					
Trawling					

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

HARBOR, NAVIGATION & TRANSPORT ACTIVITIES ¹

Harbor, navigation and transport activities are regulated under provisions of the *Harbors and Navigation Act 1993*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Navigation markers/aids					
General navigation and operation of vessels (other than anchoring)					
Anchoring of vessels – less than 80 metres (overall length)					
Anchoring of vessels – 80 metres and over (overall length)					Special Purpose Areas will provide for anchoring of vessels 80 metres and over in all harbors and in designated transshipment and anchoring locations and pilot boarding grounds
Permanent vessel moorings			permit		Permit: A permit will be required, which includes assessment by DEWNR and DPTI.
Dredging		limit			Limit: Activity is confined to harbors established under the <i>Harbors and Navigation Act 1993</i> .
Depositing dredged materials		limit			

Notes:

¹ Activities undertaken to support the ongoing operation of ports and harbors will be provided for in all zones. Also, given the extensive development expected to occur over the next 5-10 years in Upper Spencer Gulf, transitional arrangements will be required. For this purpose all HPZ, SZ and RAZ in Upper Spencer Gulf Marine Park will be declared Special Purpose Areas. This will provide for (a) developments comprising a development or project, or that part of a development or project, within the ambit of a declaration under section 46 of the *Development Act 1993*; and (b) activities comprising development approved under section 49 (crown development and public infrastructure) or section 49A (Electricity infrastructure development) of the *Development Act 1993*. This arrangement will be assessed at the time the first management plan is reviewed.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

COASTAL DEVELOPMENTS AND INFRASTRUCTURE ¹

Coastal developments and infrastructure are regulated under provisions of the *Development Act 1993*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Infrastructure (marinas, jetties, pontoons, breakwalls)					
Outfall and pipelines					
Renewable energy infrastructure (wind, wave, tidal)					

Notes:

¹ Coastal developments and infrastructure in HPZ will be managed under the *Development Act 1993* to achieve the definition of the zone (i.e. no harm to habitats or the functioning of ecosystems). Developments will be considered on a case by case basis to ensure that the achievement of the objects of the Act and the zone are supported appropriately. Development Plans and significant projects are informed by the Planning Strategy which now includes the objects of the *Marine Parks Act 2007* so consideration of these will inform the assessment process. In addition, as part of the assessment process, advice or direction may be required from the Coast Protection Board and/or the Environment Protection Authority and other authorities, depending on the nature of the development. These agencies also have the requirement to take into account the objects of the *Marine Parks Act 2007*.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

AQUACULTURE

Aquaculture activities are regulated under provisions of the *Aquaculture Act 2001*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Farming of bivalve molluscs					
Farming of aquatic animals (other than prescribed wild-caught tuna) with regular feeding					
Farming of prescribed wild-caught tuna					
Farming of algae					
Pilot leases					

Notes: Aquaculture in HPZ will be managed under the *Aquaculture Act 2001* to ensure that all reasonable and practicable measures are taken to achieve the definition of the zone (i.e. no harm to habitats or the functioning of ecosystems). The *Aquaculture Act 2001* operates in addition to the *Marine Parks Act 2007* and requires aquaculture policies to seek to further the objects of the *Marine Parks Act 2007* where they apply within a marine park.

KEY

	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with stated limits under the Regulations.
permit	Activity is deemed to be consistent with the definition of the zone when conducted in accordance with a permit under the Regulations.
	Activity is deemed to be inconsistent with the definition of the zone and will not be allowed. However, the Minister for Sustainability, Environment and Conservation may grant a permit for an activity that would otherwise be prohibited or restricted in a zone on a case by case basis.

WASTEWATER DISPOSAL/ DISCHARGES

Discharges are generally regulated under provisions of the *Environment Protection Act 1993* and the *Environment Protection (Water Quality) Policy 2003*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Discharge ¹					Discharges regulated under sections 3(2) or 8(7) of Schedule 1 of the <i>Environment Protection Act 1993</i> are prohibited
Extraction and disposal for a desalination plant ¹					
Vessel discharge of wastewater ²					Specifically regulated by Clause 36 of the <i>Environment Protection (Water Quality) Policy 2003</i>

Notes:

¹ Discharges in HPZ will be managed under the *Environment Protection (Water Quality) Policy 2003* to ensure that all reasonable and practicable measures are taken to achieve the definition of the zone (i.e. no harm to habitats or the functioning of ecosystems).

² Wastewater includes black water, concentrated black water and grey water as defined by the *Environment Protection (Water Quality) Policy 2003*.

KEY	
	Activity is deemed to be consistent with the definition of the zone (i.e. no change to current activity/use).
limit	Activity is consistent with the definition of the zone when conducted in accordance with stated limits.
*	Activity is deemed to be inconsistent with the definition of the zone and will not be considered until such time as it can be demonstrated otherwise.
	Activity is deemed to be inconsistent with the definition of the zone and will not be permitted.

RESOURCE EXPLORATION AND PRODUCTION

These activities are regulated under provisions of the *Mining Act 1971*, the *Petroleum and Geothermal Act 2000*, the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982* to achieve the objectives of the marine park zones described under the *Marine Parks Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Exploration (passive)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– satellite/high level airborne					
– airborne surveys				*	*Will depend on the nature and timing of the proposed survey in relation to key environmental considerations (e.g. breeding and migration cycles of protected species).
– geophysical/geochemical surveys			limit		Limit: Will depend on the nature and timing of the proposed survey in relation to key environmental considerations (e.g. breeding and migration cycles of protected species).
Exploration (active)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– geological sampling			*		* Will depend on nature of proposed surveying
– geophysical/geochemical surveys			*		* Will depend on nature of proposed surveying
– drilling (drill rig within zone)		*			* Will depend on nature of proposal and its location
– deviated drilling (drill rig outside zone)			limit	*	Limit: Activity will need to be conducted in accordance with approved conditions * Deviated drilling from outside zone may be considered if consistent with the zone
– trenching/bulk sampling	*	*			* Will depend on nature of proposal and its location

RESOURCE EXPLORATION AND PRODUCTION

These activities are regulated under provisions of the *Mining Act 1971*, the *Petroleum and Geothermal Act 2000*, the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982* to achieve the objectives of the marine park zones described under the *Marine Parks Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Gas storage					
– carbon sequestration (surface facilities within zone)	*	x	x		* Will depend on nature of proposal and its location
– carbon sequestration (surface facilities outside zone)			*	*	* Deviated drilling from outside zone may be considered if consistent with the zone
Production/ Extraction	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– seawater (for extraction of resources such as salt)					
– through drillhole (surface facilities within zone)	*				* Will depend on nature of proposal and its location
– through drillhole (surface facilities outside zone)			limit	*	Limit: Activity will need to be conducted in accordance with approved conditions * Extraction from deviated drillhole from outside zone may be considered if consistent with the zone
– underground mining with surface facility	*				* Will depend on nature of proposal and its location
– underground mining with no surface facility		limit	*	*	Limit: Activity will need to be conducted in accordance with approved conditions. May be considered if activity does not compromise habitats or the functioning of ecosystems. * Will depend on nature of proposal and its location.
– pipeline on/above ground/seabed/trenched		*			* Will depend on nature of proposal and its location
– pipeline underground			*	*	* Will depend on nature of proposal and its location
– seabed dredging	*				* Will depend on nature of proposal and its location
– pit-type extraction	*				* Will depend on nature of proposal and its location

RESOURCE EXPLORATION AND PRODUCTION

These activities are regulated under provisions of the *Mining Act 1971*, the *Petroleum and Geothermal Act 2000*, the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982* to achieve the objectives of the marine park zones described under the *Marine Parks Act 2007*.

	GMUZ	HPZ	SZ	RAZ	Limits / Permits / Exceptions
Processing	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	
– mineral facility (mobile e.g. vessel based)	*				* Will depend on nature of proposal and its location
– mineral facility (permanent)					
– petroleum/geothermal facility					

Notes: All licence applications under the *Mining Act 1971* and the *Petroleum and Geothermal Act 2000* within and adjacent to marine parks are referred by the Minister for Mineral Resources and Development to the Minister for Sustainability, Environment and Conservation for concurrence. A referral process is required for the approval of on-ground exploration, and production activities, as part of the relevant mining regulation protocols between DMITRE and DEWNR. This provides for case-by-case assessment of each proposed activity. This includes activities deemed consistent with with the definition of the zone. The table indicates which activities are likely to be restricted when leases, licences and permits are considered by the Ministers. Activity proposals are considered by assessing risk. Activities likely to compromise the values of any zone would not be approved. A similar process is expected to be undertaken for activities authorised under the *Offshore Minerals Act 2000* and the *Petroleum (Submerged Lands) Act 1982*.

This table may be revised over time as new technologies and techniques are developed, to ensure that new technologies are appropriately considered, consistent with marine park zone objectives.

The following types of special purpose area may be identified in accordance with section 13(1)(c) of the *Marine Parks Act 2007*. Notwithstanding the zoning of the area, the following activities will be permitted in the special purpose areas.

Special Purpose Areas (significant economic development)

Activities comprising a development or project, or that part of a development or project, within the ambit of a declaration under section 46 of the *Development Act 1993*; and

Activities comprising development approved under section 49 (Crown development and public infrastructure) or section 49A (Electricity infrastructure development) of the *Development Act 1993*.

Special Purpose Areas (harbor activities)

Activities undertaken by or on behalf of the Minister responsible for the administration of the *Harbors and Navigation Act 1993*, or a port operator, for the purposes of maintaining or improving a harbor or port. (Harbor, port and port operator have the same meanings as in the *Harbors and Navigation Act 1993*.)

Special Purpose Areas (submarine cables and pipelines)

Activities undertaken for the purposes of maintaining or improving submarine cables or pipelines comprising public infrastructure (within the meaning of section 49 of the *Development Act 1993*).

Special Purpose Areas (transhipment)

Activities comprising the establishment, maintenance or improvement of facilities for a transhipment point prescribed or to be prescribed under the *Harbors and Navigation Regulations 2009*; and

Activities comprising or connected with loading or unloading a vessel at a transhipment point prescribed under the *Harbors and Navigation Regulations 2009*.

Special Purpose Areas (anchoring)

Activities comprising anchoring a commercial vessel (within the meaning of the *Harbors and Navigation Act 1993*) in an area recommended for that purpose by way of a Notice to Mariners by the Minister responsible for the administration of the *Harbors and Navigation Act 1993*.

Special Purpose Areas (shore-based recreational line fishing)

Recreational fishing from the shore by use of a hand line or rod and line. (Hand line, recreational fishing and rod and line have the same respective meanings as in the *Fisheries Management Act 2007*.)

Special Purpose Areas (Murray Mouth dredging)

Activities associated with dredging undertaken for the purposes of maintaining or improving water flows through the mouth of the River Murray.

Special Purpose Areas (Defence Prohibited Area)

Activities undertaken by the Department of Defence in relation to the Proof and Experimental Establishment (Port Wakefield).

Special Purpose Areas (Aquaculture)

Activities authorised under the *Aquaculture Act 2001*.

Appendix 3 List of Parties Consulted

Name		Affiliation	Organisation
Natalie	Ban	Research Fellow	James Cook University
James	Bennett	Fishery Management Officer	Department for Primary Industries and Resources SA
Michelle	Besley	Fishery Manager	Department for Primary Industries and Resources SA
Andrew	Burnell	Principal Advisor	Department of Environment and Natural Resources
Jenny	Cassidy	Senior Project Officer	Department for Transport, Energy and Infrastructure
Dave	Cockshell	Chief Petroleum Geophysicist	Department for Primary Industries and Resources SA
Shaun	de Bruyn	Manager	South Australian Tourism Commission
Graham	Edgar	Senior Research Fellow	University of Tasmania
Alice	Fistr	Manager, Fisheries Policy	Department for Primary Industries and Resources SA
Ian	Fitzgerald	Secretary	South Australian Recreational Fishing Advisory Council
Jim	Godden	Abalone Fisher	Southern Zone Abalone Fishery
David	Hitchcock	Director, Environment & Infrastructure	The Local Government Association of SA
Peter	Hollister	Director, Marine Transport and Policy	Department for Transport, Energy and Infrastructure
Phil	Hollow	Project Coordinator, Marine Parks Project	Department of Environment and Natural Resources
Vera	Hughes	Team Leader, Legislation and Governance	Department of Environment and Natural Resources
Ian	Janzow	Member	Metropolitan Fishers Alliance
Sean	Kalling		Tony's Tuna International Pty Ltd
Carl	Kavina	General Manager Marine Operations	Flinders Ports Pty Ltd
Keld	Knudsen	Senior Policy Adviser	Australian Petroleum Production and Exploration Association
David	Lake	Manager	South Australian Tourism Commission
Peter	Lauer	Manager Aquaculture Policy, Planning and Environment Unit	Primary Industries and Regions South Australia
Ian	Llewellyn	Senior Project Officer	Department for Transport, Energy and Infrastructure
Nigel	Long	Director Corporate and Social Responsibility	South Australian Chamber of Mines and Energy
Neil	MacDonald	Executive Officer	Charter Boat Owners and Operators Association
Arthur	Martel	Secretary	Southern Zone Abalone Management

Name		Affiliation	Organisation
Martin	McCarthy	Chief Executive Officer	Kingston District Council
	Members		Marine Park Council
	Members		South Australian Regional Organisation of Councils
	Members	The Scientific Working Group	Department of Environment and Natural Resources
Angus	Mitchell	Principal Policy Officer	Department of Environment and Natural Resources
Gary	Morgan	Chairman	Wildcatch Fisheries SA
Paul	Mullen	Former Executive Officer	South Australian Tourism Commission
Merilyn	Nobes	Policy Manager, Fisheries and Aquaculture	Department for Primary Industries and Resources SA
Peter	Noble	Secretary	Surveyed Charter Boat Owners and Operators Association
Bob	Oliver	Member	Lower South East Marine Parks Advisory Group
Justin	Phillips	Executive Officer & Industry Liaison Officer (PIFS)	South Australian Rock Lobster Advisory Council, South East Professional Fishermen's Association, Northern Zone Rock Lobster Fishing Association
Keith	Rowling	Fishery Manager	Department for Primary Industries and Resources SA
Brenton	Schahinger	Chairman	South Australian Recreational Fishing Advisory Council
Rob	Shaw		Department for Primary Industries and Resources SA
Scoresby	Shepherd	Senior Research Fellow	South Australian Research and Development Institute
Peter	Short	Project Director	Department for Transport, Energy and Infrastructure
Emmanuel	Sloan	Manager, Aquaculture Planning Unit	Department for Primary Industries and Resources SA
Sean	Sloan	Director of Fisheries and Aquaculture Policy	Primary Industries and Regions South Australia
Adam	Stanford	Commercial Analyst	South Australian Tourism Commission
Graham	Tapley	President	South Australian Sardine Industry Association
Chris	Thomas	Branch Manager	Department of Environment and Natural Resources
Michael	Tokley	Executive officer	Central Zone Abalone Fishery
Lianos	Triantafillos	Fishery Manager	Department for Primary Industries and Resources SA
Hank	van der Wijngaart	President	Scuba Divers Federation of SA
Paul	Watson	Executive Officer	South Australian Sardine Industry Association

Name		Affiliation	Organisation
Tim	Ward	Program Leader, Wild Fisheries	South Australian Research and Development Institute
Scott	Weaver	President	Charter Boat Association of SA
Peter	Welch	Executive Officer	Marine Fishers Association
Ian	Winton	Deputy Chairman	South Australian Recreational Fishing Advisory Council
Alison	Wright	Project Coordinator, Marine Parks	Department of Environment and Natural Resources
Qifeng	Ye	Acting Chief Scientist	South Australian Research and Development Institute

Appendix Table 4-2 Tourism, education & wellbeing impacts for Upper South East Marine Park

	Very unlikely	Unlikely	Neither likely nor unlikely	Likely	Very likely	Don't know
MP likely to increase tourism in our area						
DENR zone	0	4	0	2	1	0
MPLAG zone	1	3	1	2	0	0
There will be more opportunity for charter boats to exploit ecotourism opportunities						
DENR zone	2	2	1	2	0	0
MPLAG zone	1	2	3	1	0	0
MP will provide increased opportunities for education about marine life						
DENR zone	0	1	1	4	1	0
MPLAG zone	0	2	1	3	1	0
MP will provide increased opportunities for our understanding of marine conservation issues						
DENR zone	0	1	2	3	1	0
MPLAG zone	0	2	2	3	0	0
MP will create new employment opportunities for local people						
DENR zone	1	2	2	2	0	0
MPLAG zone	0	3	1	3	0	0
MP will have no impact (positive or negative) on me or my family						
DENR zone	0	2	1	4	0	0
MPLAG zone	0	2	3	2	0	0
MP will improve the quality of life of people in my community						
DENR zone	1	2	2	2	0	0
MPLAG zone	1	3	2	1	0	0
MP will improve my personal quality of life						
DENR zone	2	2	2	1	0	0
MPLAG zone	1	3	0	3	0	0
MP will negatively change our way of life*						
DENR zone	2	2	0	3	0	0
MPLAG zone	1	2	0	4	0	0
