

Blue fairy wren attracting plants

Prickly plants make ideal refuge for small birds and provide safe nesting sites in suburban gardens where cats often prey on native birds. Due to habitat fragmentation and loss of urban biodiversity blue fairy wrens have declined in our urban environments. Creating a dense and diverse habitat is one of the best ways of attracting this beautiful bird back into our gardens.

- *Acacia continua*
- *Acacia oswaldii*
- *Acacia paradoxa*
- *Acacia rhigiophylla*
- *Acacia rupicola*
- *Acacia spinescens*
- *Acacia verticillata*
- *Acacia victoriae*
- *Banksia praemorsa*
- *Bursaria spinosa*
- *Callistemon brachyandrus*
- *Callistemon pallidus*
- *Callistemon teretifolius*
- *Calytrix tetragona*
- *Chrysocephalum apiculatum*
- *Clematis microphylla*
- *Correa* sp.
- *Daviesia ulicifolia*
- *Davisea leptophylla*
- *Enchylaena tomentosa*
- *Eutaxia microphylla*
- *Grevillea juniperina* upright form
- *Grevillea lavandulacea* (some forms)
- *Grevillea pinaster*
- *Grevillea* 'Pryor's Hybrid'
- *Hakea carinata*
- *Hakea nodosa*
- *Hakea rostrata*
- *Hakea rugosa*
- *Hakea vittata*
- *Hardenbergia violacea*
- *Isopogon dubius*
- *Isopogon formosus*
- *Leptospermum continentale*
- *Leptospermum lanigerum*
- *Leptospermum myrsinoides*
- *Lomandra effusa*
- *Lomandra multiflora* ssp. *dura*
- *Olearia ramulosa*
- *Poa labillardieri*
- *Pultenaea largiflorens*
- *Xanthorrhoea semiplana*
